environmental

# Florisil ${ }^{\circledR}$ SPE cleanup for organochlorine pesticides and polychlorinated biphenyl compounds (PCBs) 

#### Abstract

This procedure is adapted from the US Environmental Protection Agency (EPA) Contract Laboratory Program, Statement of Work for Organic Analyses, Multimedia, Multi-Concentration, OLM04.0. It is not intended to be a replacement or substitute for the official procedure. Please refer directly to the published procedure for additional information.

## Preparing for Sample Cleanup

## A. Determine the size of Florisil ${ }^{\circledR}$ solid phase extraction

 (SPE) tube needed for sample cleanup. If the gas chromatography (GC) autosampler can operate reliably with 1 mL of sample extract, then a 500 mg tube (cat.\# 24031 \& 24032) is used and the required final volume is 1 mL . If the GC autosampler requires a larger sample volume, prepare 2 mL of sample extract using a 1 g tube (cat.\# 24034). Manual injection requires only 1 mL final extract and a 500 mg tube. See Tips for Better Results below.B. Every lot of Florisil ${ }{ }^{~ a d s o r b e n t ~ m u s t ~ b e ~ q u a l i t y ~ c o n t r o l-~}$ tested for activity level before using for sample cleanup. Add 0.5 mL of $2,4,5$-trichlorophenol solution $(0.1 \mu \mathrm{~g} / \mathrm{mL}$ in acetone) and 0.5 mL of Standard Mixture A (midpoint concentration) to 4 mL of hexane. Reduce the final volume to 0.5 mL using nitrogen. Place mixture onto the top of a washed Florisil ${ }^{\circledR}$ cartridge, and elute it with 9 mL of hexane:acetone $(90: 10) \mathrm{v} / \mathrm{v}$. Use two additional 1 mL hexane rinses to ensure quantitative transfer of standard from the Florisil ${ }^{\circledR}$ tube. Reduce the final volume to 1 mL using nitrogen, and analyze the solution by GC/electron capture detector (ECD) using at least one of the GC columns specified for sample analysis. Determine the recovery and percent recovery for each analyte. The check sample must be analyzed on a GC/ECD and meet the initial calibration and calibration verification technical acceptance criteria. The Florisil ${ }^{\circledR}$ lot is acceptable if all pesticides are recovered at $80 \%$ to $120 \%$, if the recovery of $2,4,5$-trichlorophenol is less than $5 \%$, and if no peaks interfering with the target analytes are detected.

[^0]Procedure for Sample Cleanup Using Florisi ${ }^{\text {® }}$ SPE Tubes

1. Attach the vacuum manifold (cat.\# 26077 or 26080 ) to a vacuum pump, install a trap between the manifold and the vacuum source. Adjust the vacuum pressure in the manifold to $<20 " \mathrm{Hg}$. Place one Florisil ${ }^{\circledR}$ tube onto the vacuum manifold for each sample extract.
2. Prior to cleanup of samples, the tubes must be washed with hexane:acetone ( $90: 10$ ). This is accomplished by placing the tube on the vacuum manifold, pulling a vacuum, and passing at least 5 mL of the hexane:acetone solution through the tube. While the tubes are being washed, adjust the vacuum applied to each tube so that the flow rate through each cartridge is approximately equal. Do not allow the cartridges to dry after they have been washed.
3. After the tubes on the manifold are washed, release the vacuum and place a rack containing labeled 10 mL collection vessels inside the manifold.
4. After the collection vessels are in place, restore the vacuum to the manifold. Transfer a volume of extract equal to the required final volume ( 1 or 2 mL )* from each sample, blank or matrix spike to the top frit of the appropriate Florisil ${ }^{\circledR}$ tube. Use a syringe or volumetric pipette to transfer the extract to the cleanup tube.
5. Elute the pesticides and PCBs in the extract concentrates through the column with 8 mL of hexane:acetone ( $90: 10$ ) and collect into the 10 mL collection vessels that are held in the vacuum manifold rack.
6. Transfer the elute in each collection vessel to a clean, appropriate vessel for nitrogen blowdown. Perform two additional 1 mL hexane rinses to ensure quantitative transfer of the tube elute.
7. Adjust the extract to the final volume ( 1 or 2 mL ) by using either nitrogen blowdown or a micro Snyder column. Measure the final volume with a syringe or by transferring the extract to a volumetric flask. The extract is ready for GC/ECD analysis.
*This volume must equal the final volume after Florisil ${ }^{\circledR}$ cleanup.

## Product Listing

## Rtx ${ }^{\circledR}$-CLPesticides Column

| ID | df $(\boldsymbol{\mu m})$ | temp. limits | $\mathbf{1 5 - M e t e r}$ | 30-Meter |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0 . 2 5 m m}$ | 0.25 | -60 to $310 / 330^{\circ} \mathrm{C}$ | 11120 | 11123 |
| $\mathbf{0 . 3 2 m m}$ | 0.50 | -60 to $310 / 330^{\circ} \mathrm{C}$ | 11136 | 11139 |
| $\mathbf{0 . 5 3 m m}$ | 0.50 | -60 to $310 / 330^{\circ} \mathrm{C}$ | 11137 | 11140 |

## Resprep ${ }^{\text {TM }}$ SPE Cartridges

(All cartridges are polypropylene and have polyethylene frits unless otherwise noted):

| Florisil $^{\circledR}$ |  |  |  |
| :---: | ---: | :--- | :--- |
| 3 mL | 500 mg | cat.\# 24031 | $50-\mathrm{pk}$. |
| $3 \mathrm{~mL} \dagger$ | 500 mg | cat.\# $24032^{*}$ | $50-\mathrm{pk}$. |
| 6 mL | 1000 mg | cat.\# 24034 | $30-\mathrm{pk}$. |
| $6 \mathrm{~mL} \dagger$ | 500 mg | cat.\# $26086^{* *}$ | $30-\mathrm{pk}$. |
| $6 \mathrm{~mL} \dagger$ | 1000 mg | cat.\# $26085^{* *}$ | $30-\mathrm{pk}$. |

$\dagger$ These cartridges are specified in the CLP Method.
*Stainless steel frits
**Glass cartridges with Teflon ${ }^{\circledR}$ frits.

Rtx ${ }^{\circ}$-CLPesticides2 Column

| ID | df $(\boldsymbol{\mu m})$ | temp. limits | 15-Meter | 30-Meter |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0 . 2 5 m m}$ | 0.20 | -60 to $310 / 330^{\circ} \mathrm{C}$ | 11320 | 11323 |
| $\mathbf{0 . 3 2 m m}$ | 0.25 | -60 to $310 / 330^{\circ} \mathrm{C}$ | 11321 | 11324 |
| $\mathbf{0 . 5 3 m m}$ | 0.42 | -60 to $310 / 330^{\circ} \mathrm{C}$ | 11337 | 11340 |

## Resprep $^{\text {TM }}$ 12- \& 24-Port Tube Manifold

Complete manifolds include glass basin with built-in vacuum regulator, polypropylene top plate with 12 or 24 individual control valves, 12- or 24 -position collection rack, and 12 or 24 Teflon ${ }^{\circledR}$ sample guides.

| Complete Resprep ${ }^{\text {m" }}-12$ Port Manifold: cat.\# 26077 |
| :--- |
| Complete Resprep $^{\text {m" }}-24$ Port Manifold: cat.\# 26080 |

Florisil ${ }^{\circledR}$ Cartridge Check Mix $1000 \mu \mathrm{~g} / \mathrm{mL}$ in acetone, 1mL/ampul

|  | Each | 5-pk. | 10-pk. |
| :--- | :---: | :---: | :---: |
|  | 32017 | $32017-510$ |  |
| w/data pack | $32017-500$ | $32017-520$ | 32117 |

Restek Trademarks: Diskcover, Resprep, Rtx, and the Restek logo.
Other Trademarks: Florisil (U.S. Silica Co.), Teflon (E.I. du Pont de Nemours \& Company, Inc.).

## 

[^0]:    Tips for Better Results

    - 1 g tubes will give the most consistent results regardless of final sample volume.
    - Flow rate during elution should be either dropwise or gravity feed (no vacuum). This will reduce trichlorophenol breakthrough.
