MicroLIT

Double Check Valves

ValuePlastics

Single-Step MicroFILTRATION

Thomson > RESTEK

Glass Filtration Equipment	Syringe Pump + Barrel heater	Syringe Dispenser
Oils (???) : Thin Oils or Aqueous-based	Oils : 60cc Syringe 0.45um SF Syringe Heater @ 55degC	10ml Only Extra leverage helps Thin Oils or Solvents/Aqueous
Motorised pumps run continuously 0.45um 1ml/min Use internal collection Test Tube	0.45um 25mm > 5ml/min New 33mm SFs 1.75x faster 8cc/min Heat to 55degC 2x faster 16cc/Min	See Double Check Valve (can be problematic with sticky oils ???)

Filtration Equipment

Vacuum Pump

Filter Flasks

Membrane Filters

Hand Vacuum Pumps

Hand VAC Pump

- OK for quick filtration
 - a leak-free system is necessary
 - can be a bit tedious
- 250mm Vac but 350 typical observed

OR ?

Vac-U-Fill

250mmHG
0.2um / 0.45um
47mm Membrane
1ml/min
new 90ml Diam 500ml

- Oils** : some tend to soften polystyrene containers
- can crack or tend to "implode"/squash under Vac

preferred for aqueous based mixes, more polar solvents

Breakthrough! PRICING! Syringe Barrel Heater

for OILS the BEST Filtration Answer
for speed thru'put

- Olive Oil; Canola, Palm oil, Cottonseed
- all approx the same viscosity at 25degC 40-80cps at 25C
- 20-25cps at 55C

PVDF preferred for "polyester" Oils

multi-Layer SF and pre-filters help preserve main and can improve flow

for auto-filling from sample reservoir - fast for thin low viscosity liquids

Microlit

Bottle Top Dispenser

- for thin aqueous Solutions
- Syringe Filter on Outlet of BTD
- Auto-filling
- extra pressure can be applied by palm-of-hand to increase speed
- with CARE as device is more delicate

Syringe Dispensing

BottleTop Filtration

2 Systems . . .

PALL Vacu-Cap and Nalgene FastCap

**Similar specs
Availability . . .
both from Chromtech
depends on Supplier Availability**

The PALL **VacuCap Filter** is used for sterilization or clarification of a wide variety of fluids. use for cell culture and serum-containing media liquids

have a Supor (hydrophilic PES polyethersulfone) membrane which provides fast flow rates.
can draw directly from mix vessel and filters directly into the desired containers, minimizing transfer steps.
accepts a variety of collection vessels.
VacuCap 90 Filter which is designed for volumes of 1–5L
have built-in prefilter that increases throughput of viscous or particulate solutions, such as serum-containing media.
Polyester membrane support. Acrylic housing.
VacuCap Filters are Sterile.
come with one piece of tubing per ten filter devices.
The feedline accessory kit includes tubing and a glass sinker.

How They WORK

use with Hand Vacuum Pump MityVac 12-MV8010 \$135		use with Motorised Vacuum Pump VPJ0332 \$535	
VacuCap 90 90mm Diam Cap	VC-4621	0.1um for critical sterilisation	\$375
10-pk	VC-4622	0.2um for sterilisation	\$350
Sterile/Fast	VC-4623	0.45um	\$350
1-5Liter volumes . . . Simple Glassware Accessory use			

The Nalgene **Fastcap Filter** works on any bottle that has a neck opening of up to 53mm. The Nalgene FastCap Filter eliminates the need to use threaded glass media bottles.

Place a Nalgene FastCap filter on bottle mouth, attach a vacuum line to the larger center vacuum hose link and your liquid media tube to the smaller tube link and start filtering.

The Nalgene FastCap. . .

filters up to 5 liters of liquid.
Housing is blue polystyrene; the 90mm filter is made of PES (polyethersulfone) with a 0.2um pore diameter.
Each filter is packaged in individual hermetically sealed plastic bags.
Nalgene FastCap filters are STERILE (gamma radiation sterilized).
Nalgene
FastCap filters are sold in individual units or a case of 10

VacuCap and Fast Cap are very similar in principle (supply and demand determine Supplier and Chromtech Stock at any time)
Accessory Glassware also available form Chromalytic - Enquire! see Glassware

Filtration Accessories : Filtration Hints

	Vac-u-Fill Bottles VacuCap fastFiltration(PALL) FastCap(Nalgene)	Liquid Dispensers Syringe Pump	Hand Vacuum Pump
Selection of Filter Media : by size Flow propl to (Diam) sqrd	0.45um : 0.22um 1.00 : 0.25 x speed	Syringe Filter : max Pressure 72psi (PP body)	on top of main fil- ter
Pre Filter : protects main filter from blocking extends lifetime and can improve speed	use coarser Glass Fibre	some have Class Fibre Multi-Layer	on top of main fil- ter
Relative speed based on Surface Area of Pore Size um	13 : 25 : 33mm 0.27 : 1.0 : 1.75 x speed		
Measured	Syringe Pump : Olive Oil 25C 30psi (PressGauge) 20ml 19mmID Syringe 0.5sqin > 1.0ml/min 0.45um PVDF	50ml syringe 29mmID > 2.3ml/min	
Vacuum vs Pressure 0.45um PVDF	HandPump Vacuum 350mm = - 7.0psi max developed Vac Flask Fil- tration Syringe Filter 25mmD Thumb Force ~10lb max = 20psi (but RSI problems ???)	47mm 25mm	47mm MF Calcula- ted Flow=0,66ml/min x { 47/25 }sqd = x 3.5 --= 2.30ml/min Measured 20ml/6.0min = 3.3ml/min
Olive Oil	Viscosity 43cps 37C 24cps 54C	Flow is propl to 1/ vis- cosity	heating speeds up flow

ALL filters tend to block up depending on particulates that actually tend to fill the filter pores
 - use of coarser pre-filter (glass Fibre) helps speed and the total sample throughput
 for best results - match the polarity of the Membrane material with the polarity of the liquid
 hydrophillic : PES > Nylon > PVDF > PTFE Hydrophobic
 water-based polar solvents polyester Oils Hydrocarbon-based Oils
 these are but generalisations - & it's very much "trial and error" for each application

Single-Step Filter Vials

- Simple Protection solution for sample prep.
- Chromatography sample clean up protect Injection ports and columns from dirt.

- 0.2um and 0.45um filter
- Nylon, PTFE, PVDF, PES
- PP body 0.45ml
- 12x32mm format Agilent autosampler compatible
