

## **Cheminert® Fittings**

# **NEW** 360 Micron Fittings

### for direct connection of 360 µm tubing

- Up to 20,000 psi with metal FS tubing
- Eliminate use of troublesome liners
- Snap-in rotating ferrule for "one-piece" fitting with no tubing twist
- Now incorporated into a new valve design

360 µm fittings are dedicated for use with either fused silica, metal, or PEEK tubing; components cannot be mixed or used with a different tubing material.

compact size and fine 2-56 threads, a leak-free connection that seals at pressures

in excess of 20,000 psi can be easily formed with the available manual tool.

Tees and crosses for PEEK or FS tubing offer a choice of three bore sizes, and feature a "quick mount" base with adhesive backing to make sure that the fitting is stable and fragile tubing doesn't get broken. There is also a quick-mount PEEK

union.

Work with metal, fused silica, or PEEK
