What are Rtx®/MXT®-1701 columns?

Rtx® and MXT®-1701 columns are fused silica and Silcosteel®-lined stainless steel (respectively) capillary GC columns coated with a 14% cyanopropylphenyl/86% dimethyl polysiloxane stationary phase. Rtx®/MXT®-1701 columns have an intermediate polarity.

Why use a 14% cyanopropylphenyl/86% dimethyl polysiloxane phase?

The cyano groups in Rtx®/MXT®-1701 columns impart a unique selectivity toward compounds that possess dipole moments and those that are proton donors or acceptors, such as alcohols and nitriles. Rtx®/MXT®-1701 columns are extremely versatile, exhibiting long column lifetime, low bleed, and thermal stability to 280°C.

Which applications work well using an Rtx®/MXT®-1701 column?

These columns are ideal for the analysis of nonpolar to polar compounds and acidic to basic species, all within a single analysis. They also are used for the analysis of alcohols, oxygenates, pesticides, and insecticides. The Rtx®/MXT®-1701 phase is equivalent to the G46 phase used in United States Pharmacopoeia (USP) Methods, and is frequently listed in US Environmental Protection Agency (EPA) Methods for pesticides and other pollutants.

Rtx®-1701/MXT®-1701 Capillary Columns

14% cyanopropylphenyl/86% dimethyl polysiloxane

This highly versatile column can be used for a wide range of applications, such as pesticides, solvents, or drug compounds.

Substituted Pyridines on an Rtx®-1701 Column

1. methanol	7. β-picoline	60m, 0.53mm ID, 3.0µm Rtx®-1701 (cat.# 12088)
2. benzene	8. 4-cyanopyridine	0.1µL direct injection of a substituted pyridine standard (0.5-5% per component), Uniliner® inlet liner
3. toluene	9. 3-cyanopyridine	Oven temp.: 60°C to 225°C @ 5°C/min.
4. pyridine	10. 2-cyanopyridine	Inj. & det. temp.: 230°C
5. α-picoline	11. picamide	Carrier gas: hydrogen
6. 2,6-lutidine		Linear velocity: 40cm/sec. (flow rate: 5.1cc/min.)
		FID sensitivity: 32 x 10 ⁻¹¹ AFS

See our chromatography products catalog or visit www.restekcorp.com for additional application chromatograms on Rtx®-1701/MXT®-1701 columns!

Features & Benefits

Feature	Benefit
Fused silica & MXT® tubing	Tubing material versatility—same price regardless of tubing.
Available in a variety of lengths, IDs and film thicknesses	Useful for a wide range of applications.
Low bleed	Increased detector sensitivity. Reduced system maintenance.
Integra-Guard™ columns	Protects column from non-volatile sample residue; longer column lifetime. Connectionless.

Choosing the Best Phase for Your Sample

When choosing a stationary phase for capillary GC separations, remember the saying “like dissolves like.” The stationary phase is a nonvolatile liquid coated on the inside of the column and acting as a solvent for the sample. The more soluble the solute (your analyte) is in the stationary phase, the more it is retained in the column.

Separations in GC are the result of the relative solubility and selective interactions of the sample solute and column stationary phase. Table I shows the four main forces responsible for solute-stationary phase interactions. The sum of all four serves as a measure of the **polarity** of the stationary phase. **Selectivity** is the ability of a phase to preferentially retain one compound over another based on specific solute-stationary phase interactions and is determined by the type and amount of substituted functional groups in the stationary phase.

Table I: Selective Solute-Stationary Phase Interactions

Dispersion forces arise from electric intermolecular fields, which result in the induction of in-phase dipoles. They are present in all stationary phases.

Orientation interactions occur between a stationary phase and a compound, both of which possess a permanent dipole.

Induction interactions occur between a stationary phase with a permanent dipole and a compound that forms a dipole as a result of the interaction with the stationary phase.

Hydrogen bonding occurs between a strong polar group (OH, NH) and a compound with strong electronegativity (F, O, N atoms). Hydrogen bonding is the strongest interaction force.

Retention indices (RI) are used to measure the overall stationary phase polarity. Retention indices on Rtx®/MXT®-1701 columns are listed in Table II. They are mathematical calculations used to indicate the elution point of a probe with respect to two straight-chain hydrocarbons. The probes used to measure RI are of different functionalities, each one designated to measure a specific solute-stationary phase interaction. As the RI for a probe on a given phase increases, the degree of specific interaction increases, relative to hydrocarbons.

Table II: 14% Cyanopropylphenyl/86% Dimethyl Polysiloxane Stationary Phase Retention Indices

RI probe	RI	Measured interaction
benzene	721	Electron density for aromatic & olefinic hydrocarbons
<i>n</i> -butanol	778	Proton donor & acceptor capabilities (alcohols and nitriles)
2-pentanone	784	Proton acceptor interaction (ketones, ethers, esters, aldehydes)
nitropropane	881	Dipole interactions

Rtx®/MXT®-1701 columns are intermediate in polarity and are coated with a 14% cyanopropylphenyl/86% dimethyl polysiloxane stationary phase. The 14% cyano substitution imparts a dipole moment to this stationary phase. Solute-stationary phase interactions occurring in the Rtx®/MXT®-1701 column include a strong dispersion interaction, plus a selectivity toward aromatic compounds, proton donors or acceptors, and compounds possessing a dipole moment. Rtx®/MXT®-1701 columns can provide separations of alcohols, nitriles, and halogenated materials that a nonpolar phase cannot.

In summary, when selecting a stationary phase, choose a phase with functional groups similar to those present in your analyte. For a versatile, intermediate-polarity stationary phase, select an Rtx®/MXT®-1701 column. These columns are the best choice for pesticides, solvents or drug compounds.

Commonly Asked Questions

What is the difference between an Rtx®-1701 and an MXT®-1701 column?

Rtx®-1701 columns are made with polyimide-coated, fused silica tubing and are deactivated with a nonpolar deactivation layer, resulting in the highest degree of tubing inertness. MXT®-1701 columns are made from unbreakable Silcosteel®-treated stainless steel. The Silcosteel® process bonds a thin, flexible layer to the stainless steel surface, which offers efficiency and inertness comparable to fused silica tubing, with increased durability. MXT® columns are caged in 4-inch diameter coils or smaller, and are ideal for compact, portable, or process GCs. Both columns possess a maximum operating temperature of 280°C.

How do I choose the right -1701 column for my application?

After you've decided whether you want an Rtx®-1701 column or an MXT®-1701 column, based on the answer to the question above, there are three main factors that should be considered when selecting a column: length, inside diameter (ID), and film thickness.

Column length affects the total plate count, which in turn, affects separation. Typical column lengths are 15, 30, 60, and 105 meters. Most separations can be achieved with 30-meter columns. However, if the sample contains very few compounds, a 15-meter column might offer sufficient separation. Alternatively, a 60- or 105-meter column might be required for samples containing large numbers of compounds.

Column ID affects both resolution and sample capacity. Typical column diameters range from 0.10mm ID to 0.53mm ID. Smaller ID columns offer better separation, but less sample capacity. 0.25mm and 0.32mm ID columns offer the best compromise between separation and capacity.

Select film thickness based on the volatility range of the compounds in the sample. As a general rule, use a film thickness of 1.0µm or greater for compounds with boiling points below 200°C. For compounds with boiling points higher than 200°C, use a film thickness of less than 1.0µm.

For answers to specific applications questions regarding Rtx®-1701 columns, contact Restek's Technical Service group, or your Restek representative.

What is an Integra-Guard™ column?

Guard columns are commonly used to trap nonvolatile residues, to protect and prolong the lifetime of the analytical column. However, for many analysts, the art of attaching a guard column to the analytical column is a mystery. Restek's chemists have discovered the solution to this mystery—the most reliable connection is no connection at all! An Integra-Guard™ column is a continuous length of fused silica tubing, containing both the guard column and the analytical column. The guard column is tied separately from the analytical column, using high-temperature string. Just imagine, guard columns WITHOUT connections - or leaks. Protecting your capillary column has never been easier!

Gas Mixes for Air Sampling

Analytical Reference Materials for Environmental Air Sampling Methods

did you know?

Spectra Gases manufactures our high-quality air monitoring gas mixes.

- ISO 9001:2000-approved gas manufacturer.
- Official EPA supplier of PAMS (ozone precursor) calibration gas.
- Only vendor of stable 62-component TO-15 gas mix.

Cylinder Design:
Aluminum construction.
Size: 8 x 24 cm.
Volume/Pressure:
104 liters @ 1800psig.
CGA-180 outlet fitting.
Weight: 1.5 lbs.

Restek Trademarks:
SilcoCan, SilcoSteel, TO-Can,
Turning Visions into Reality,
Restek logo
Other Trademarks:
Freon (E.I. duPont de
Nemours & Co., Inc.)
Kel-F (3M Co.)

Restek is proud to offer Spectra Gases gas mixes to meet your environmental air sampling requirements. Rigorous quality control guarantees the reproducibility and stability of every mix.

Spectra Gases production and analytical procedures ensure that each calibration mix is of the highest accuracy. Calibration mixes are produced individually and gravimetrically, using NIST (National Institute of Science and Technology) traceable weights. All calibration mixes are individually analyzed against Spectra Gases master standards, directly traceable to NIST (TO-14 component) Primary Gas Standards and NIST traceable weights.

Spectra Gases uses a proprietary cylinder passivation process that ensures proven stability and lifetime, even for complex mixes. They are the only vendor capable of delivering a stable 62-component TO-15 gas mix. Restek and Spectra Gases offer many stock mixes for environmental air analysis. Mixes not already in stock are blended in master cylinders and are ready for final product packaging, so delivery of most products requires only a minimum leadtime.

Don't see the gas mixture you need? Contact Restek for a custom gas mixture that meets your requirements

for more info**Air Sampling & Analysis**

Our SilcoCan™ (Siltek®-treated) and TO-Can™ (electro polished) canisters are your best choice for collecting ambient air samples as specified in EPA TO-14/TO-15. In addition to the TO-listed compounds, inert SilcoCan™ canisters offer excellent stability for low ppb levels of sulfur compounds. Used in conjunction with a SilcoCan™ or TO-Can™ canister, our Passive Air Sampling Kit incorporates all of the hardware you'll need for air sample collection. Our miniature air sampling canisters are ideal for indoor air, personal, and emergency response sampling.

We also offer ultra-clean resin, fiber filters, sampling bags, thermal desorption tubes, and a range of gas reference standards to meet your environmental air sampling requirements.

To view our complete line of air sampling products, visit our website at www.restek.com/air.

SilcoCan™ Air Monitoring Canisters

Siltek® treated - ideal for low-level reactive sulfur compounds (1-20ppb)

- Unsurpassed inertness, even for sulfur-containing or brominated compounds.
- Sizes from 1 to 15 liters support a wide range of sampling needs.
- Optional vacuum/pressure gauge (other gauges available).
- For critical applications, order a Siltek® treated valve - add suffix “-650” to the catalog number of the canister.

For ultimate inertness, we treat SilcoCan™ air monitoring canisters with our unique Siltek® passivation technology. Even highly active components, at low parts-per-billion concentrations, can be readily sampled and stored without loss. The valve is a high quality, metal-to-metal seal, 2/3-turn valve with metal diaphragms. Both stainless steel and Siltek®-treated valves are available, in both the 2-port and 3-port configurations.

did you know?

All Restek canisters are equipped with high-quality Parker Hannifin diaphragm valves. Each valve is helium leak-tested to 4×10^{-9} cc/sec. The all-stainless steel construction eliminates contamination and the valve operates at temperatures from -100°C to 250°C. Compression outlet fitting, indicator plate to display open or closed position, 1/4" inlet and outlet.

We also ship our canisters cleaned, batch-tested per USEPA TO-14, and under 30psig pressure with dry nitrogen.

TO-Can™ Air Monitoring Canisters

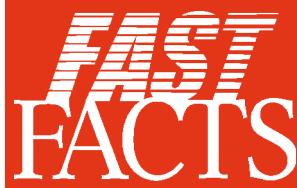

Optimized for US EPA Methods TO-14 and TO-15

- High quality, metal-to-metal seal, 2/3-turn valve with metal diaphragms.
- Sizes from 1 to 15 liters.
- Optional 30" Hg/60psig vacuum/pressure gauge (other gauges available).

Information
from Restek

Dear Customers:

The US Environmental Protection Agency (EPA) has recently awarded contracts for organic low medium (OLM) concentration samples within the Superfund program under the 04.2 revision Statement of Work. Restek has prepared calibration, internal standard, and surrogate solutions to meet these requirements.

During development of these products, one basic premise was understood—we would produce the fewest number of solutions possible while maintaining stability and maximum shelf life by avoiding chemical interactions. We carefully reviewed the 04.2 Statement of Work and determined that the identical products specified in 04.1 will also be required for the 04.2 revision. The products listed here are a result of this work.

To order, call our customer service team at 800-356-1688 or 814-353-1300, ext. 3, or your local Restek representative.

Sincerely,

Eric A. Steindl

CLP OLM 04.1 (04.2) Semivolatiles Reference Materials

CLP Semivolatile Target Compounds

Feature	Benefit
SV Calibration Mixtures—Restek calibration mixtures are subdivided into two separate solutions. These are:	<i>Maximum shelf life and no chemical interactions combined with the fewest number of solutions possible.</i>
14 phenols @ 2,000ppm in CH ₂ C ₁ ₂ CLP 04.1 Phenols Calibration Mix (cat.# 31494)	<i>Contains all acidic target compounds required by method. Maximum shelf life*=36 months.</i>
51 compounds @ 1,000ppm in CH ₂ C ₁ ₂ CLP 04.1 B/N MegaMix™ (cat.# 31495)	<i>Contains all base/neutral compounds required by method. Maximum shelf life*=24 months.</i>
18 chlorinated pesticides @ 2,000ppm in hexane/toluene (cat.# 31012)	<i>Add pesticides to working solutions for confirmation only as needed.</i>
Data packs available for all listed quantitative environmental stock standards	<i>Complies with stringent audits.</i>

*Maximum shelf life based on unopened ampul.

CLP Semivolatile Internal Standard Mixes

Feature	Benefit
Internal Standard Mixtures—two concentrations are available:	<i>Provides greatest versatility in preparing working solutions.</i>
SV Internal Standard Mix 4,000µg/mL in CH ₂ C ₁ ₂ (cat.# 31006)	<i>Highest concentration possible—always requires sonication before use.</i>
SV Internal Standard Mix 2,000µg/mL in CH ₂ C ₁ ₂ (cat.# 31206)	<i>Lower concentration—easier to handle, may require sonication before use.</i>
Data packs available for all listed quantitative environmental stock standards	<i>Complies with stringent audits.</i>

CLP Semivolatile Surrogate Mixes

Feature	Benefit
Surrogate Mixtures—two concentrations are available: 1mL or 5mL ampuls, BNA combined or separate Acid/BN mixes.	<i>Provides greatest versatility and maximum value in preparing working solutions.</i>
Acid Surrogate Mix 1,500µg/mL or 7,500µg/mL 1mL or 5mL ampuls	<i>Can prepare 10mL, 50mL, or 250mL of working solution from one ampul.</i>
B/N Surrogate Mix 1,000µg/mL or 5,000µg/mL 1mL or 5mL ampuls	<i>Can prepare 10mL, 50mL, or 250mL of working solution from one ampul.</i>
BNA Surrogate Mix 1,000µg/mL (B/N) and 1,500µg/mL (acids) 1mL ampuls	<i>Can prepare 10mL combined working solution from one ampul.</i>
Data packs available for all listed quantitative environmental stock standards	<i>Complies with stringent audits.</i>

Restek's Customer Support—at your service!

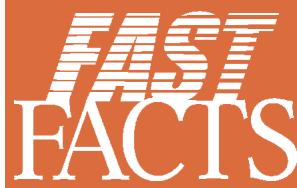

Sales & Service

Our highly trained customer service team looks forward to working with you. We are here when you need to place an order, track a package, check the status of an open order, or request a price quote. We will suggest time- and money-saving options and are dedicated to getting your products to you *fast*. Because we know how busy you are, we will do whatever it takes to simplify your work. That's what having the best customer service in the business is all about!

Shipping

Same day shipments are the standard at Restek! Our shipping team is completely dedicated to getting your products from our warehouse to your lab as quickly as you need them. We'll do whatever it takes to make sure you are satisfied. Trips to the airport to get products to a customer are not unheard of at Restek. We truly mean...*whatever it takes*.

CLP OLM 04.1 (04.2) Pesticides Reference Materials

The US Environmental Protection Agency (EPA) recently has awarded contracts for organic low medium (OLM) concentration samples within the Superfund program under the 04.2 Statement of Work. Restek has prepared calibration and surrogate solutions to meet these requirements.

During development of these products, one basic premise was understood—we would produce the fewest number of solutions possible while maintaining stability and maximum shelf life by avoiding chemical interactions. We carefully reviewed the 04.2 Statement of Work and determined that the identical products specified in 04.1 also will be required for the 04.2 revision. The products listed here are a result of this work. Call 800-356-1688 or 814-353-1300, ext. 3, to order your CLP OLM 04.1 (04.2) pesticides reference materials today.

5-packs, 10-packs, and data packs available on ALL products.

Complies with stringent audits and saves money—built-in discounts.

Pesticide Target Compounds

Feature	Benefit
Pesticide Calibration Mixtures—Restek calibration mixtures are offered in two different concentrations:	<i>Maximum value and ease of dilution.</i>
Pesticide Mix A (cat.# 32003) Pesticide Mix B (cat.# 32004) 8–16µg/mL	<i>Used to prepare working solutions at 16 x CRQL, 4 x CRQL, and CRQL by serial dilution.</i>
Pesticide Mix A (cat.# 32297) Pesticide Mix B (cat.# 32298) 5–10µg/mL	<i>Used to prepare working solutions at 20 x CRQL, 4 x CRQL, and CRQL by direct dilution.</i>
Pesticide Mix AB #2 (cat.# 32292) 8 and 16µg/mL	<i>Used to prepare single working solution containing all pesticides at 16 x CRQL, 4 x CRQL, and CRQL by serial dilution from a single ampul.</i>

CLP Pesticide Surrogate Mixes

Feature	Benefit
Combined surrogate and individual surrogate mixtures available.	<i>Provides greatest versatility in preparing working solutions.</i>
Pesticide Surrogate Mix DCB and TCMX at 200ppm (cat.# 32000)	<i>Highest concentration possible in acetone. Requires sonication before use.</i>
Individual surrogates at 200µg/mL 1mL and 5mL ampuls	<i>DCB and TCMX available as individual solutions to customize working solutions.</i>

CLP Aroclor®, Chlordane, and Toxaphene Mixes

Feature	Benefit
Two concentrations available: 1000ppm in hexane or 200ppm in isoctane	<i>High concentrations for maximum value and versatility.</i>
Aroclor® 1016/1260 1000ppm ea. (cat.# 32039)	<i>One mixture containing both materials—fewer ampules required.</i>
All other Aroclor® mixes	<i>Individual mixtures for correct identification and quantitation.</i>
Toxaphene: 1000ppm and 5000ppm	<i>Easily prepare high-concentration working solutions.</i>
Chlordane (technical): 1000ppm and 5000ppm	<i>Easily prepare high-concentration working solutions.</i>

Pesticide and PCB Kits

Feature	Benefit
CLP Pesticides and PCB kits	<i>Built-in discounts and convenient mixture groups that are frequently required—in one handy kit.</i>

Technical tips for working with solutions containing decachlorobiphenyl:

Decachlorobiphenyl has poor solubility in most organic solvents. The maximum concentration that can be prepared in acetone, hexane, or isoctane is 200µg/mL. Temperature will affect the solubility as well. Storing solutions at reduced temperatures will cause the decachlorobiphenyl to precipitate.

It's crucial that these products be sonicated for a minimum of 15 minutes prior to opening the ampul. Because each ultrasonic bath operates at different energy levels, the 15 minutes must be used as a guideline only. Longer sonication time will not affect the product quality.

It is important to remember this applies to working solutions prepared in your laboratory as well. The amount of compound that precipitates is dependent upon concentration AND temperature. If you store your standards at a temperature lower than 4°C (even dilute solutions), allow extra sonication time.

For best results, sonicate the ampul before each use.

CLP GPC Calibration Mix

Qualitative mixture useful for determining GPC dump/collect times. Data packs are not available. The compounds are dissolved in methylene chloride at the concentrations listed.

CLP GPC Calibration Mix

bis(2-ethylhexyl)phthalate	10mg/mL
corn oil	250
methoxychlor	2.0
perylene	0.2
sulfur	0.8

In methylene chloride

1mL/ampul	Each	5-pk.	10-pk.
	32019	32019-510	32119
5mL/ampul	Each	5-pk.	10-pk.
	32023	32023-510	32123

Revised GPC Calibration Mix

bis(2-ethylhexyl)phthalate	5mg/mL
corn oil	250
methoxychlor	1.0
perylene	0.2
sulfur	0.8

In methylene chloride

1mL/ampul	Each	5-pk.	10-pk.
	32041	32041-510	32141
5mL/ampul	Each	5-pk.	10-pk.

Pesticide Surrogate Mix

decachlorobiphenyl 2,4,5,6-tetrachloro-*m*-xylene

200µg/mL ea. in acetone, 1mL/ampul

Each	5-pk.	10-pk.
32000	32000-510	
w/data pack	32000-500	32100

Florisil® Cartridge Check Mix

2,4,5-trichlorophenol

1,000µg/mL in acetone, 1mL/ampul

Each	5-pk.	10-pk.
32017	32017-510	
w/data pack	32017-500	32117

Pesticide Resolution Check Mix

γ-chlordane	1µg/mL	endosulfan sulfate	2µg/mL
4,4'-DDE	2	endrin ketone	2
dieldrin	2	methoxychlor	10
endosulfan I	1		

In hexane, 1mL/ampul

Each	5-pk.	10-pk.
32001	32001-510	
w/data pack	32001-500	32101

Pesticide Resolution Check Mix w/Surrogates

γ-chlordane	1µg/mL	endosulfan sulfate	2µg/mL
4,4'-DDE	2	endrin ketone	2
decachlorobiphenyl	2	methoxychlor	10
dieldrin	2	2,4,5,6-tetrachloro- <i>m</i> -xylene	2
endosulfan I	1		

In hexane, 1mL/ampul

Each	5-pk.	10-pk.
32073	32073-510	
w/data pack	32073-500	32173

Pesticide Performance Evaluation Mix

α-BHC	1µg/mL	4,4'-DDT	10µg/mL
β-BHC	1	endrin	5
γ-BHC (lindane)	1	methoxychlor	25

In hexane, 1mL/ampul

Each	5-pk.	10-pk.
32002	32002-510	
w/data pack	32002-500	32102

Pesticide Performance Evaluation Mix w/Surrogates

α-BHC	1µg/mL	decachlorobiphenyl	2µg/mL
β-BHC	1	endrin	5
γ-BHC (lindane)	1	methoxychlor	25
4,4'-DDT	10	2,4,5,6-tetrachloro- <i>m</i> -xylene	2

In hexane, 1mL/ampul

Each	5-pk.	10-pk.
32074	32074-510	
w/data pack	32074-500	32174

Pesticide Matrix Spike Mix

aldrin	25µg/mL	dieldrin	50µg/mL
γ-BHC (lindane)	25	endrin	50
4,4'-DDT	50	heptachlor	25

In acetone, 1mL/ampul

Each	5-pk.	10-pk.
32018	32018-510	
w/data pack	32018-500	32118

Pesticide Calibration Mixtures

These products can be used to prepare calibration mixes at the Contract Required Quantitation Level (CRQL), 4 x CRQL, 16 x CRQL by serial dilution (includes surrogates).

Pesticide Standard Mix A

α-BHC	8µg/mL	endosulfan I	8µg/mL
γ-BHC (lindane)	8	endrin	16
4,4'-DDD	16	heptachlor	8
4,4'-DDT	16	methoxychlor	80
decachlorobiphenyl	16	2,4,5,6-tetrachloro- <i>m</i> -xylene	8
dieldrin	16		

In hexane, 1mL/ampul

Each	5-pk.	10-pk.
32003	32003-510	
w/data pack	32003-500	32103

Pesticide Standard Mix B

aldrin	8µg/mL	endosulfan II	16µg/mL
β-BHC	8	endosulfan sulfate	16
δ-BHC	8	endrin aldehyde	16
α-chlordane	8	endrin ketone	16
γ-chlordane	8	heptachlor epoxide (B)	8
4,4'-DDE	16	2,4,5,6-tetrachloro- <i>m</i> -xylene	8
decachlorobiphenyl	16		

In hexane, 1mL/ampul

Each	5-pk.	10-pk.
32004	32004-510	
w/data pack	32004-500	32104

CLP Pesticides—Kits

KIT

Pesticide Kit #1

Complete for CLP 04.1 using Standard Mix A & B at 16 x CRQL with surrogates, Resolution Check Mix, & Performance Evaluation Mix with surrogates.

- 32000: Pesticide Surrogate Mix
- 32073: Resolution Check Mix w/surrogates
- 32074: Performance Evaluation Mix w/surrogates
- 32003: Pesticide Standard Mix A w/surrogates (16 x CRQL)
- 32004: Pesticide Standard Mix B w/surrogates (16 x CRQL)
- 32005: Toxaphene
- 32007: Aroclor® 1221
- 32008: Aroclor® 1232
- 32009: Aroclor® 1242
- 32010: Aroclor® 1248
- 32011: Aroclor® 1254
- 32039: Aroclor® 1016/1260
- 32017: Florisil® Cartridge Check Mix
- 32018: Pesticide Matrix Spike Mix

KIT

Pesticide Kit #2

Complete for CLP 04.1 using Standard Mix A & B at 20 x CRQL without surrogates, Resolution Check Mix, & Performance Evaluation Mix without surrogates.

- 32000: Pesticide Surrogate Mix
- 32001: Resolution Check Mix
- 32002: Performance Evaluation Mix
- 32297: Pesticide Standard Mix A (20 x CRQL)
- 32298: Pesticide Standard Mix B (20 x CRQL)
- 32005: Toxaphene
- 32007: Aroclor® 1221
- 32008: Aroclor® 1232
- 32009: Aroclor® 1242
- 32010: Aroclor® 1248

Restek's Customer Support—at your service!

Sales & Service

Our highly trained customer service team looks forward to working with you. We are here when you need to place an order, track a package, check the status of an open order, or request a price quote. We will suggest time- and money-saving options and are dedicated to getting your products to you *fast*. Because we know how busy you are, we will do whatever it takes to simplify your work. That's what having the best customer service in the business is all about!

Shipping

Same-day shipments are the standard at Restek! Our shipping team is completely dedicated to getting your products from our warehouse to your lab as quickly as you need them. We'll do whatever it takes to make sure you are satisfied. Trips to the airport to get products to a customer are not unheard of at Restek. We truly mean...*whatever it takes*.

Photoionization Detector (PID) Lamps

From the “Pioneers of PID”™

Restek offers Photoionization Lamps from the “*Pioneers of PID*,”™ Robert Gauthier and Scientific Services Co. The quality of these lamps are assured through testing of each lamp component during manufacturing, as well as testing of each assembled lamp’s performance prior to being shipped. In fact, these lamps are so good that the manufacturer supports their products with a “Guarantee of Three Months of Useful Life.”

Scientific Services Co. innovation continues with the introduction of the Model 108-BTEX lamp—the first new design since the introduction of the Model 108-10.0/10.6 in 1979. The BTEX lamp produces on average 33% more output than the workhorse Model 108-10.0/10.6.

Features & Benefits

Feature	Benefit
Longer life.	Get more for your money with each lamp.
More powerful 108-BTEX lamp.	Model 108-BTEX has 33% more output than older models.
Lamps individually tested.	Confidence that your lamp will work, right out of the box.
Variety of models available.	Best lamps available for most instrumentation.

Commonly Asked Questions

Will the new Model 108-BTEX fit as a replacement to my old Model 108-10.0/10.6?

Yes. The lamps are fully interchangeable. The Model 108-BTEX has identical dimensions as the Model 108-10.0/10.6.

What instruments can use PID lamps as general replacements?

For Tracor, OI, and Baseline instruments, a lamp with a 0.781" diameter base must be used, such as Model 108-10.0/10.6 and Model 108-BTEX. For HNU and SRI detectors, a lamp with a 1.375" diameter base must be used, such as Model 103 C. Other PID lamps are available that offer different ionization potentials.

Should I clean my PID lamp?

Yes, cleaning the lamp is necessary because the window may become contaminated from stationary phase bleed and non-volatile residues. Cleaning the PID window enhances sensitivity by increasing the amount of ionization energy passing through the window to the sample. PID lamp windows must be cleaned by polishing with an aluminum oxide slurry.

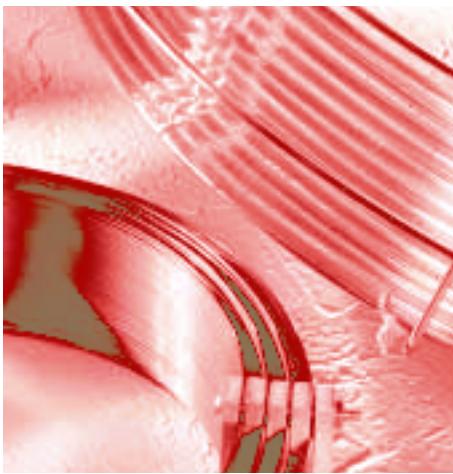

Description	Cat. #
PID Lamp, Model 103 C (1.375" base)	20676
PID Lamp, Model 108-10.0/10.6 (0.781" base)	20675
PID Lamp, Model 108-BTEX (0.781" base)	23020
PID Lamp, Model 108-9.6 (0.781" base)	23021
PID Lamp, Model 107-8.4 (0.781" base)	23022
PID Lamp, Model 109-11.8 (0.781" base)	23023

What is the Rtx®/MXT®-5?

The nonpolar Rtx® and MXT®-5 columns are fused silica and Silcosteel®-lined stainless steel (respectively) capillary columns coated with a 5% diphenyl/95% dimethyl polysiloxane stationary phase.

Why use a 5% diphenyl/95% dimethyl polysiloxane phase?

The Rtx®/MXT®-5 column is the most popular and versatile capillary stationary phase available. The diphenyl groups impart a selectivity towards aromatic compounds. Rtx®/MXT®-5 columns are extremely rugged, exhibiting long column lifetime, low bleed, and high maximum operating temperatures.

Which applications work well using an Rtx®/MXT®-5 column?

A 5% diphenyl phase is extremely versatile, permitting the analysis of nonpolar to polar compounds, and acidic to basic species, all in a single analysis. An Rtx®/MXT®-5 column is ideal for environmental analyses, such as semivolatile pollutants, phenols, polynuclear aromatic hydrocarbons, pesticides, herbicides, and diesel range organics (DRO). The Rtx®/MXT®-5 column exhibits excellent inertness towards highly reactive, trace environmental compounds and has low column bleed to improve detection limits and instrument sensitivity. The phase also is ideal for drugs of abuse and flavor analyses.

Rtx®-5/MXT®-5 Capillary Columns

5% diphenyl/95% dimethyl polysiloxane

The Rtx®-5 phase is extremely versatile and can be used for a wide range of applications, such as organic volatile impurities in residual solvents.

30m, 0.53mm ID, 5.0µm Rtx®-5 (cat.# 10279). 1mL headspace injection of 24 common residual solvents for pharmaceutical processing. Prepared to equal about 500ppm in the bulk pharmaceutical. Samples shaken and heated at 90°C for 15 minutes. **Oven temp.:** 35°C (hold 10 min.) to 100°C @ 5°C/min., to 240°C @ 25°C/min. (hold 5 min.); **Inj./det. temp.:** 220°C/240°C; **FID sensitivity:** 1.05 x 10⁻¹¹ AFS; **Carrier gas:** helium, 35cm/sec. set @ 35°C; **Split ratio:** 2:1.

1. methanol	7. diethyl ether	13. ethyl acetate	19. carbon tetrachloride
2. ethylene oxide	8. 1,1-dichloroethene	14. chloroform	20. n-butanol
3. ethanol	9. methylene chloride	15. tetrahydrofuran	21. heptane

Features & Benefits

Feature	Benefit
Fused silica & MXT® tubing	Tubing material versatility—same price regardless of tubing.
Low-bleed	Increased detector sensitivity, reduced system maintenance.
Application Specific Columns Rtx®-5MS	Low-blead to improve GC/MS detection limits and reduce interference with trace analyte identification and detection.
Rtx®-5Sil MS	Optimized low-blead GC/MS column for semivolatile pollutants.
Rtx®-5 Amine	Basic deactivation layer provides highest degree of inertness for primary amines and basic compounds.
Integra-Guard™ columns	Leak-free connection, protects column from non-volatile sample residue, longer column lifetime.

Choosing the Best Phase for Your Sample

When choosing a stationary phase for capillary GC separations, remember the saying “like dissolves like.” The stationary phase is a nonvolatile liquid coated on the inside walls of the column and acts as a solvent for the sample. The more soluble the solute or your analyte is in the stationary phase, the more retention it has in the column.

Separations in GC are the result of the relative solubility and selective interactions of the sample solute and column stationary phase. Table I shows the four main forces responsible for solute-stationary phase interactions. The sum of all four forces serves as a measure of the **polarity** of the stationary phase. **Selectivity** is the ability of a phase to preferentially retain one compound over another based on specific solute-stationary phase interactions and is determined by the type and amount of substituted functional groups in the stationary phase.

Table I: Selective Solute-Stationary Phase Interactions

Dispersion forces arise from electric intermolecular fields, which result in the induction of in-phase dipoles. They are present in all phases.

Orientation interactions occur between a stationary phase and a compound, both of which possess a permanent dipole.

Induction interactions occur between a stationary phase with a permanent dipole and a compound, which forms a dipole as a result of the interaction with the stationary phase.

Hydrogen bonding occurs between hydrogen contained in a compound and a stationary phase with a strong electronegative center (F, O, N).

Retention indices (RI) are used to measure the overall stationary phase polarity. (Retention indices on Rtx®/MXT®-5 columns are listed in Table II.) They are mathematical calculations used to indicate the elution point of a probe with respect to two hydrocarbons. The probes used to measure RI are of different functionalities, each one designated to measure a specific solute-stationary phase interaction. As the difference in RI for a probe on a given phase increases, the degree of specific interaction increases.

Table II: 5% Diphenyl/95% Dimethyl Polysiloxane Stationary Phase Retention Indices

RI probe	RI	Measured interaction
benzene	667	Electron density for aromatic & olefinic hydrocarbons
<i>n</i> -butanol	667	Proton donor & acceptor capabilities (alcohols and nitriles)
2-pentanone	689	Proton acceptor interaction (ketones, ethers, esters, aldehydes)
nitropropane	743	Dipole interactions

Rtx®/MXT®-5 columns are nonpolar and coated with a 5% diphenyl/95% dimethyl polysiloxane stationary phase. The small percentage of phenyl groups impart an aromatic nature to this phase. Solute-stationary phase interactions occurring within the Rtx®/MXT®-5 column includes a strong dispersion interaction, plus a selectivity towards aromatic compounds. The Rtx®/MXT®-5 column can provide separations of aromatic compounds, such aromatic hydrocarbons, flavor volatiles, and benzene/toluene/*o*-, *m*-, *p*-xylenes, that a 100% dimethyl polysiloxane stationary phase cannot.

In summary, when selecting a stationary phase, choose a phase with similar functional groups as those present in your analyte. For the most versatile, chemically inert, thermally stable stationary phase, select an Rtx®/MXT®-5 column. An Rtx®/MXT®-5 column is the column of choice for environmental, drugs of abuse and fragrance analyses.

Commonly Asked Questions

How do I know that an Rtx®-5/MXT®-5 phase will resolve my compounds of interest?

A 5% diphenyl/ 95% dimethyl polysiloxane stationary phase possesses a stronger dispersion interaction between the solute and stationary phase than a 100% dimethyl polysiloxane phase. Additionally, the 5% diphenyl substitution increases the selectivity towards aromatic compounds. If you cannot separate your compounds of interest on a methyl silicone column and they differ in functionality or boiling point by 5°C, the Rtx®/MXT®-5 column should provide separation.

What is the difference between an Rtx®-5 and an MXT®-5 column?

Rtx®-5 columns are made with polyimide-coated, fused silica tubing and deactivated with a nonpolar deactivation layer, resulting in the highest degree of tubing inertness. These columns possess a maximum operating temperature of 350°C. MXT®-5 columns are made from unbreakable Silcosteel®-treated stainless steel. The Silcosteel® process bonds a thin, flexible layer to the stainless steel surface, which offers comparable efficiency and inertness to fused silica tubing, with increased durability. MXT® columns are caged in 4-inch diameter coils or smaller, and are ideal for compact, portable, or process GCs.

Which type of Rtx®-5 column should I use for my analysis?

The Rtx®-5 is an all-purpose column for use with non-trace-level analyses (ppm levels and above) on FIDs, PIDs, ELCDs, and TCDs. It is recommended to use the Rtx®-5 for FID environmental work (TPH, DRO, screening column, etc.), for solvent and chemical analysis, flavor and fragrance analysis, and residual solvents in pharmaceutical products (USP <467>). Every Rtx®-5 column is tested with the temperature-programmed Grob test mixture to guarantee low bleed and a high degree of inertness, efficiency, and versatility.

The Rtx®-5MS is an all-purpose column designed for trace-level analyses (ppb to ppt concentrations) on sensitive GC detectors such as MSDs, ECDs, NPDs, SCDs, and FPDs, where it is important to maximize detector sensitivity. When a capillary column is connected to a sensitive detector, column bleed can cause a number of problems, such as misidentification of analytes, loss of detector sensitivity, and inaccurate quantitation. The combination of our MS column chemistry and rigorous QA testing ensures that each MS column exceeds the requirements of the most sensitive GC detectors. The Rtx®-5MS column is ideal for the analysis of drugs of abuse, clinical and forensic samples, arson analysis, and low-level purity analysis.

The XTI®-5 is an all-purpose 5% diphenyl/ 95% dimethyl polysiloxane environmental capillary column. It is tested for special bleed specifications at high temperature to ensure good environmental analyses of active components. It can be used with all common GC detectors.

The Rtx®-5Sil MS column is ideal for semivolatile pollutant analysis for EPA Methods 8270, 1625, 625, and 525. It offers superior inertness towards reactive phenols, such as pentachloro- and dinitrophenols, providing more accurate quantitation at low concentration levels. It also provides low GC/MS bleed and improved resolution of semivolatile pollutants.

The Rtx®-5Amine column is a nonpolar 5% diphenyl polysiloxane with a basic deactivation layer that reduces adsorption and improves response of basic compounds. Analyses of active basic compounds that previously required derivatization or another analytical technique can be performed on the Rtx®-5Amine. This column is ideal for analyzing a wide variety of basic compounds such as alkylamines, diamines, triamines, ethanolamines, and nitrogen containing heterocycles.

What is an Integra-Guard™ column?

An Integra-Guard™ column is a continuous length of fused silica tubing, containing both the guard column and the analytical column. No guard tubing is more leak-free than an Integra-Guard™ column! The guard column is tied separately from the analytical column using high-temperature string. The transition area between the columns is the point where the guard column ends and the analytical column begins. Just imagine, guard columns WITHOUT press-tight connections. Protecting your capillary column has never been easier!

SilcoCan™ Canisters

Increases accurate sampling and analysis for low-level sulfur compounds!

The SilcoCan™ air sampling canister is Restek's premier sampling container for the air sampling of sulfur-containing compounds. The SilcoCan™ canister has been optimized for holding samples with low ppb-levels of organo-sulfur species (**Figure 1**).

Figure 1—The SilcoCan™ canister demonstrates amazing stability for 10ppbv sulfur mix.

Commonly Asked Questions

• *Can I reuse the canister?*

Yes. The high temperature limit of the SilcoCan™ canister and high-purity valve ensures that even heavily contaminated samples can be removed from your canister, leaving you ready for the next sample.

• *Can the canister be reconditioned?*

Yes. Call our customer service department at 814-353-1300 or 800-356-1688, ext. 3, or your local Restek representative to get approval and a return authorization number. Our qualified technicians will then thoroughly inspect your canister before quoting, and assess what level of service is needed to get your canister back into the field and performing at an optimum level.

• What is the full temperature range of the canister?

The SilcoCan™ air sampling canister can be used or cleaned in a temperature range of -100°C to 250°C.

• Where can I find Silcosteel®-coated air sampling kits for use with the SilcoCan™ canister?

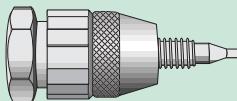

Ask for information about our complete list of air sampling kits and their accessories including flow controllers, in-line filters, and passive tubing. See the Air Monitoring section of Restek's Product Guide.

Features & Benefits

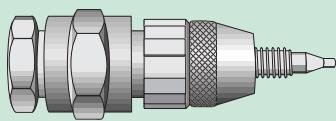

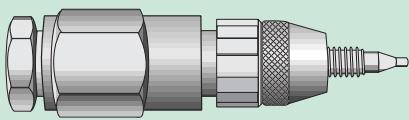

Feature	Benefit
High purity, 2/3-turn valve with stainless steel valve diaphragms	No sample adsorption for more accurate results, easy to use.
Vacuum/pressure gauge optional	Readily indicates internal conditions.
Variety of sizes available	Meet a variety of sampling needs.
Temperature stability to 250°C	Can be cleaned at higher temperature, producing a cleaner can.
Silcosteel®-coated valve available	A complete, passive sample pathway ensures sample stability.
Silcosteel®-coated canisters	Inert surface is ideal for low-level sulfur sampling.

Trident™ Direct Guard Column System

Easy to Use, Low Dead Volume— The Ultimate Combination of Convenience and Column Protection

Unlike other “one size fits all” guard systems the **Trident™ Direct** system gives you the power to select the right level of protection for your analysis. The system offers three levels of protection and guard cartridges that are available in four dimensions with a variety of bonded phases to match your analytical column. The economical leak-free cartridge design provides an unprecedented combination of convenience, economy, and reliability.

Features & Benefits

Feature	Benefit
Direct connection	Easy installation that eliminates connection tubing and extra dead volume.
Three levels of protection	Provides the right protection for your needs.
Leak-free design	Smooth, reliable operation saves lab time.
Cartridge column design	Eliminates waste and saves money.

The foundation of the **Trident™ Direct** system is a reusable direct connect holder that easily attaches to any HPLC column using CPI- or Waters®-style end fittings.* The system is available in the following configurations to match different protection level needs: in-line filter, in-line filter with holder for 1cm guard cartridge, and in-line filter with holder for 2cm guard cartridge. The guard cartridges are available in both 2.1 and 4.0mm ID's and are interchangeable with the appropriate length holder.

*The standard PEEK® tip that comes with the **Trident™ Direct** systems is compatible with Parker®, Swagelok®, Upchurch®, Valco®, and other CPI-style fittings. To use the **Trident™ Direct** systems with Waters®-style end fittings, the tip must be replaced with cat. # 25088.

Commonly Asked Questions

• What level of protection do I need for my application?

For protection against particulate matter only, use the Trident™ Direct in-line filter. For protection against particulate matter and sample impurities, use the Trident Direct 1cm holder and 1cm guard cartridges. This is the most popular configuration and is well suited for most applications. For protection against particulate matter and heavily contaminated samples, use the Trident Direct 2cm holder and 2cm guard cartridges.

• What internal diameter guard cartridge should I use?

If the ID of your analytical column is greater than 3.2 and less than 6mm, use a 4.0mm ID guard cartridge. If the ID of your analytical column is between 2.0 and 3.2mm, use a 2.1mm ID guard cartridge.

• Do I need a different size holder depending on the guard cartridge ID?

No, because all Trident™ guard cartridges have the same outer diameter, the holders will function with either 2.1 or 4.0 mm ID guard cartridges. The holder needed is dependent only on the length of the guard cartridge.

• Which guard cartridge should I use?

After you decide what level of protection and diameter guard cartridge is right for your application, you should choose the cartridge with a bonded phase that is the same or similar to your analytical column. The Allure™ and Ultra bonded phases are base-deactivated and compatible with virtually all silica-based analytical columns.

FAST FACTS

At-a-Glance Product Information from Restek

Always use Sulfinert™-coated components when peak performance is required for your sulfur analyses.

What is Sulfinert™ Treatment?

The Sulfinert™ coating is the leading passivation technique for the storage and transfer of low-level, organo-sulfur-containing samples.

The Sulfinert™ coating is ideal for use in environmental, petrochemical, polymeric, high- and low-pressure environments. The Sulfinert™ layer is stable in a wide variety of pH ranges. Unlike fused silica coatings which can dissolve in a caustic environment, the Sulfinert™ coating is stable when sampling caustic amines as well as acidic sulfur compounds.

Sulfinert™ Coatings

For Sampling, Transfer, and Analysis of Sulfur Compounds to less than 20ppb

Restek is proud to offer Sulfinert™ coatings—the next generation of metal passivation coatings for low-level sulfur storage and transfer. Restek has been a pioneer in the development and the application of passive coatings since 1987, beginning with the introduction of our Silcosteel® treatment. Recently, new sulfur regulations and low detection limits have created a demand for an even more inert surface, so we created Sulfinert™ coatings.

Features & Benefits

Feature	Benefit
Inert	No adsorption of sulfur compounds.
Durable and flexible	Will not crack or flake.
Stable in a wide pH range	Sample amines and sulfur compounds without compromising compound stability.
Thermally stable	Usable to 600°C.
Non-polymeric	No memory effects as seen with Teflon®-coated parts.
Readily available	Treated tubing and fittings are in stock for immediate delivery.

Commonly Asked Questions

How is Sulfinert™ coating different from Silcosteel® coating?

Sulfinert™ coating has been proven to hold organo-sulfur compounds at lower concentrations than Silcosteel® coating under static sampling conditions. Sulfinert™ coating was developed specifically to sample or transfer organo-sulfur compounds at concentrations to less than 20ppb.

Why does Sulfinert™ coating work so well for sulfur compounds?

The Sulfinert™ layer is applied to the stainless steel surface and is completely inert to organo-sulfur compounds. Typically stainless steel will adsorb or react with sulfur compounds such as hydrogen sulfide and mercaptans. The Sulfinert™ layer will prevent sulfur compounds from contacting the reactive stainless surface.

Why use Sulfinert™ coatings instead of fused silica linings?

The Sulfinert™ coating can be used in a wide variety of pH ranges. Fused silica linings will become active when amines or other basic compounds are sampled because of a chemical reaction with the Si-O bond.

Is custom coating service available?

Restek offers custom service for parts in your sulfur analysis systems such as manifolds and valves. Combining this service with the stock Sulfinert™-treated parts offered by Restek will permit your entire sulfur system to be inert. Contact our technical service department at 800-356-1688 or 814-353-1300, ext. 4, to inquire about our custom Sulfinert™ service.

Product
Information
from Restek

Why use an Rtx®-CLPesticides column?

The Rtx®-CLPesticides columns overcome the coelution and component breakdown problems that commonly occur in chlorinated pesticide analysis. These columns provide baseline resolution of target analytes, yielding more accurate qualitative data without GC/MS detection. An analysis time of under 25 minutes can increase sample throughput by 15% compared to other columns. The Rtx®-CLPesticides columns do not have the problems associated with cyanopropyl phases, such as on-column breakdown of methoxychlor and DDT, and low maximum operating temperatures. They have a high maximum operating temperature (330°C), which allows bake-out of high-boiling contaminants, and extends column lifetime, minimizes baseline instability, and reduces instrument maintenance.

Which applications work well using Rtx®-CLPesticides columns?

These stationary phases are highly selective for compounds that contain electronegative substituents (halogenated compounds). The Rtx®-CLPesticides columns not only work well for chlorinated pesticides, but also for chlorophenoxy herbicides, triazine herbicides, haloacetic acids, and Aroclor® mixtures.

Rtx®-CLPesticides Capillary Columns

What are the Rtx®-CLPesticides/Rtx®-CLPesticides2 columns?

The Rtx®-CLPesticides/Rtx®-CLPesticides2 columns are fused silica capillary columns coated with a unique stationary phase specifically designed to provide the best separation of chlorinated pesticides. The Rtx®-CLPesticides/Rtx®-CLPesticides2 columns are used in parallel for simultaneous quantitation and confirmation by gas chromatography/electron capture detection (GC/ECD). The Rtx®-CLPesticides/Rtx®-CLPesticides2 columns are intermediate polarity columns.

Features & Benefits

Feature	Benefit
Unique phase	<i>Baseline resolution of pesticides in fast analysis time; better resolution than other available phases; improved qualitative and quantitative reliability.</i>
Exceptional inertness	<i>No on-column breakdown of sensitive pesticides; reduces GC and column maintenance.</i>
High thermal stability	<i>Permits column bake-out to remove high-boiling contaminants; reduces contaminant interferences with target analytes; decreases ECD bleed; reduces system maintenance.</i>

Optimizing the analysis of pesticides using the Rtx®-CLPesticides column pair

In the environmental industry, analytical methods for chlorinated pesticides often are the most challenging to perform. Analysts struggle with linearity, breakdown, and lengthy calibrations; as well as column bleed, column reactivity, and poor separation. Not only do the labs keep track of resolution requirements and breakdown performance criteria, but they also analyze extracts that usually contain high-boiling contaminants. While these contaminants do not always appear in the GC/ECD chromatogram, they can cause shifts in retention time, elevated baselines, and target compound breakdown.

Pesticide methods generally are analyzed using two columns of different polarity to provide confirmation and increase confidence in reporting the presence of target analytes. To reduce analysis times, many labs prefer to run both columns simultaneously using the same run conditions. However, this can be difficult because the run conditions for one column may not be optimum for the second, confirmation column.

Although dual-column analyses can be set up several different ways, Restek recommends a dual-column system where the sample is injected into a single injection port via direct injection, vaporized in a hot injection port liner, transferred onto a 5m Siltek™ guard column, and split onto the two columns using a glass "Y" splitter. Siltek™ deactivation provides the best inertness for chlorinated pesticide analysis, minimizes endrin breakdown, and the 5m length allows enough of a retention gap so that the sample is split evenly between the two columns. In a conventional direct injection port using a Uniliner® glass sleeve, the guard column is connected with a press-tight seal at the bottom of the liner. This type of injection port set-up eliminates contact of the analytes with the active metal sur-

faces below the bottom of the liner. Although a splitless injection also can be made, the direct injection method provides the best reproducibility, while achieving the required detection limits and minimizing instrument maintenance.

The most common phases used for dual-column pesticide analysis are cyanopropyl stationary phases (1701 columns) and phenyl/methyl phases (5, 35, 50 columns). 1701 columns resolve the pesticides well, but have several limitations: they are prone to on-column breakdown of DDT and methoxychlor as a result of degradation of the stationary phase, and have relatively low maximum operating temperatures (275°C).

Various phenyl/methyl phases also can be used for dual-column pesticide analysis, such as a 5% phenyl/phenyl primary column and a 35% or a 50% phenyl/methyl confirmational column. While each of these phases has a higher maximum operating temperature and is less reactive than the cyano phases, they all have target compounds that coelute to some extent.

Figure 1: The Rtx®-CLPesticides column (30m, 0.32mm ID, 0.50μm) provides baseline resolution of 22 chlorinated pesticides in EPA Method 8081 in less than 23 minutes.

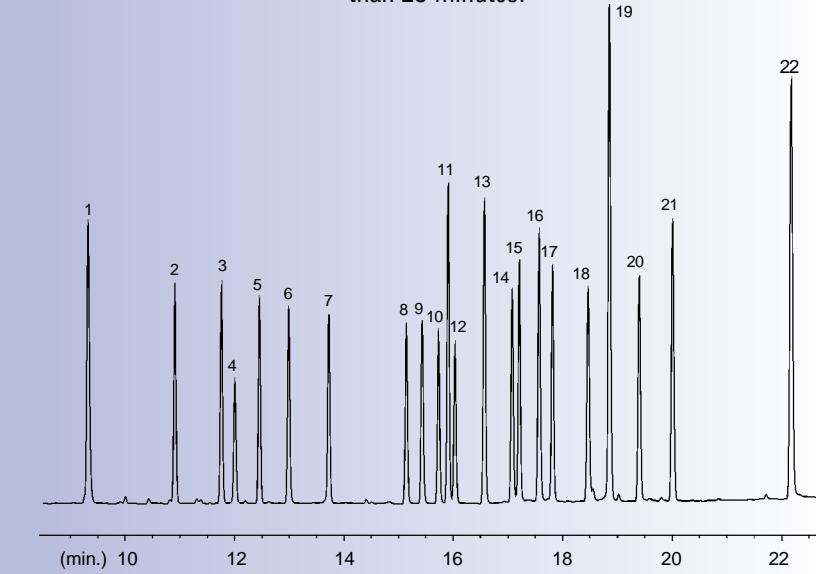

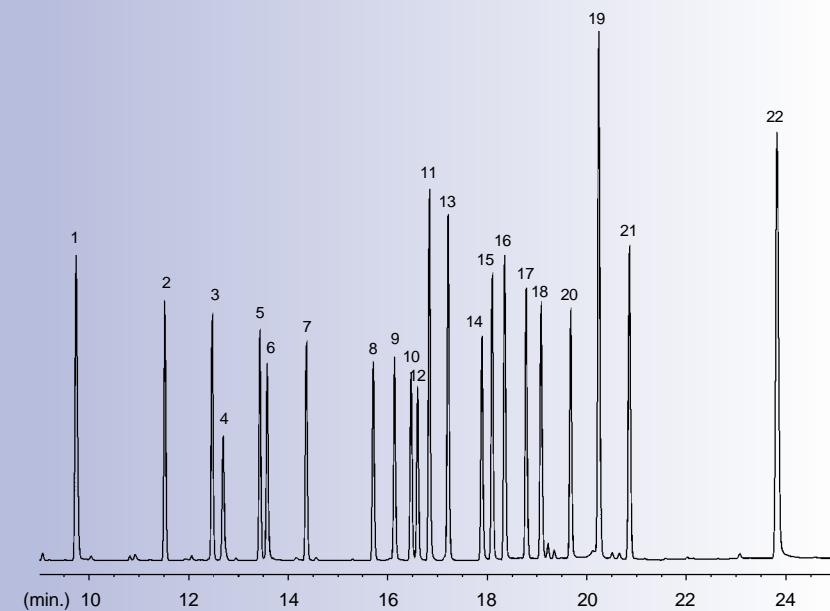

Figure 2: The Rtx®-CLPesticides2 column offers 4 elution order changes, making it the ideal confirmational column.

Rtx®-CLPesticides columns simplify pesticide analyses

The introduction of the Rtx®-CLPesticides and the Rtx®-CLPesticides2 columns has simplified the choice of phase for pesticide analysis. Both columns achieve baseline resolution under identical run conditions for the 22 common chlorinated pesticides as listed in US Environmental Protection Agency (EPA) Methods 8081, CLP, and 608, thus permitting simultaneous dual-column confirmation (Figures 1 and 2). In addition to their separating ability, the Rtx®-CLPesticides columns have a maximum operating temperature of 330°C and feature low column bleed after conditioning. Also, when using cyanopropyl-phase or phenyl-phase columns, laboratories typically must calibrate using 5-point curves, injecting mix A and mix B compounds separately because the target compounds coelute. Because no coelution problems occur with the Rtx®-CLPesticides column pair, the mixes can be combined. This eliminates the need for at least five injections during the calibration of the instrument, which may free a minimum of 2.5 hours a day to analyze more samples.

Although the Rtx®-CLPesticides columns are available in all three common ID dimensions, Restek recommends the 0.32mm ID column. This column ID provides the best combination of sample capacity and efficiency. If your sample extracts are particularly contaminated, you may find that the 0.53mm ID columns allow for longer duration of calibration because of the higher capacity. Columns of 0.25mm ID provide better resolution, but have less capacity for contaminated or large samples.

Commonly Asked Questions

How can I minimize endrin and DDT breakdown on my pesticides system?

The major source of analytical problems in pesticide analyses occur in the injection port—it is important to maintain the cleanliness and inertness of this area. Two compounds used to check injection port inertness are 4,4'-DDT and endrin. 4,4'-DDT breakdown is generally indicative of an injection port contaminated by oily or dirty sample extracts. Replacing the liner and cutting off 6 to 12 inches of the guard column usually is required to restore system inertness. Use GPC or carbon column cleanup to remove hydrocarbon contamination. Endrin breakdown is indicative of a chemical reaction taking place in the injection port. Endrin breakdown can be caused by impurities in the carrier gas, active metal surfaces, an improperly deactivated inlet liner, or septum particles. Proper and frequent injection port maintenance will help keep endrin breakdown to a minimum. Endrin breakdown also can be significantly reduced by using Siltek™ guard tubing and inlet liners in the injection port. Siltek™ deactivation provides the highest degree of inertness towards pesticides and typically shows a <1% breakdown of endrin.

What other analyses can I run on the Rtx®-CLPesticides and Rtx®-CLPesticides2 columns?

The Rtx®-CLPesticides columns also can be used for US EPA Method 508 pesticides, 8151 chlorophenoxy herbicides, 619 triazine herbicides, 552 haloacetic acids, and PCBs (Aroclors or congeners) which typically are analyzed using the same instrument as that used for chlorinated pesticides. The optimized phases of the Rtx®-CLPesticides and Rtx®-CLPesticides2 columns allow one column pair and the same instrument for several different environmental analyses, thereby increasing the versatility and usability of your pesticide GC.

What is the proper way to condition the Rtx®-CLPesticides column pair for the lowest ECD bleed?

Although the Rtx®-CLPesticides columns are pre-conditioned at Restek, we recommend re-conditioning the columns before analyzing samples. To properly condition a new Rtx®-CLPesticides or Rtx®-CLPesticides2 column, install the column into the injection port, cap off the ECD, set the appropriate column flow rate (1.3mL/min. for helium carrier gas), temperature program the GC from 40°C to 330°C @ 15°C/min., and condition the columns out of the detector overnight. After conditioning, cool the oven, install the columns into the ECDs and re-condition in the detectors at 310°C for one hour.

I have been using one of the traditional phases for my pesticide analysis. What are some of the troublesome pesticide separations on these phases and how does the Rtx®-CLPesticides column pair overcome these?

Rtx®-CLPesticides and Rtx®-CLPesticides2 columns: Both columns provide baseline separation of the 22 chlorinated pesticides listed in EPA Method 8081 within 24 minutes. Maximum operating temperature is 330°C.

5% phenyl phase: Difficult separation of -BHC/ -BHC, endosulfan I/ -chlordan, and 4,4'-DDE/dieldrin. Analysis time is 32 minutes. Maximum operating temperature is 330°C.

35% phenyl phase: Difficult separation of -BHC/aldrin and -chlordan/endosulfan I. Analysis time is 26 minutes. Maximum operating temperature is 310°C.

1701 cyanopropyl phase: Baseline resolution of 22 pesticides in US EPA Method 8081. Analysis time is 28 minutes. Maximum operating temperature is 280°C. May see on-column breakdown of DDT and methoxychlor as a result of degradation of the stationary phase.

50% phenyl phase: Difficult separation of -chlordan/endosulfan I. Analysis time is 25 minutes. Maximum operating temperature is 310°C.

FAST FACTS

At-a-Glance Product Information from Restek

***Press-Tight® Connectors are available with Siltek™ deactivation, which features high temperature stability, extreme durability, and low bleed. Ask us about Siltek™ deactivation when you order.**

Vu-Union®
Helping Hand

The Helping Hand is included with all Vu-Union® connectors and makes assembly very easy!

GC Column Connectors

Leak-free seals for reliable connections

Connecting two pieces of fused silica tubing is a necessary task for gas chromatographers. This includes connecting a guard column to an analytical column, or connecting a column to a mass spectrometer (MS) transfer line. No matter what the connection, the ultimate goal is to ensure a leak-free seal without causing dead volume. Restek connectors can help accomplish this goal easily.

Press-Tight® Connectors*

- One connector fits all standard Restek tubing outer diameters.
 - Taper sealing mechanism means no dead volume, leak-free seal.
 - Quick to install; saves time.
 - Many configurations available.
 - Stable to 325°C.

To order, call 800-356-1688 or
814-353-1300, ext. 3, or your local
Restek representative.

To order, call 800-356-1688 or
814-353-1300, ext. 3, or your local
Restek representative.

The Press-Tight® connector is one of the most commonly used products for joining two pieces of fused silica tubing. When used correctly, the Press-Tight® connector creates a leak-free seal between fused silica tubing without dead volume. Press-Tight® connectors are available in a straight configuration, which traditionally is used for connecting a guard column to an analytical column; a 'Y' configuration for connecting a guard column to two analytical columns; and an 'X' configuration for special connection needs. The straight connector and 'Y' connector also are available in an angled configuration to lessen the strain on the fused silica tubing.

Vu-Union® Connectors

- Taper sealing mechanism means no dead volume, leak-free seal.
 - Added benefit of a mechanical seal so the connection won't separate.
 - Vacuum model available for MS applications.
 - 'Y' configuration also available.

The Vu-Union® connector uses a glass taper seal identical to that of the Press-Tight® connector, thus achieving a leak-free seal without dead volume. It also provides a mechanical seal that prevents the column from moving or separating, thus giving extra reliability for critical applications such as MS.

The Vu-Union® connector is available in two configurations:

- **Standard**—joins tubing using graphite ferrules.
 - **Vacuum**—for applications like MS; uses a Vespel®/graphite ferrule.

There is a standard, straight Vu-Union® connector for joining a guard column to an analytical column, and a 'Y' Vu-Union® connector for joining a guard column to two analytical columns.

0.33/0.74mm Vu-Union® Connector: cat.# 20418 (ea.) **'Y' Vu-Union® Connector:** cat.# 20432 (ea.)

MXT® Low Dead Volume Connectors

- Stainless steel construction means no more breakage.
- Silcosteel®-treated for inertness, causes no peak tailing.
- Low dead volume minimizes peak tailing.
- Connects metal capillary tubing or fused silica capillary tubing.

Restek has applied the Silcosteel® metals passivation coating to the surface of a low dead volume connector to provide an inert, durable connection for metal and fused silica tubing. The MXT® low dead volume connector features a $\frac{1}{32}$ " union that uses

metal ferrules for metal tubing and Valcon® polyimide ferrules for fused silica tubing. The MXT® low dead volume connector is also available from Restek in a 'Y' configuration.

MXT® Low Dead Volume Connector:

for 0.28mm ID MXT® columns: cat.# 20397 (ea.)

for 0.53mm ID MXT® columns: cat.# 20394 (ea.)

MXT® Low Dead Volume 'Y' Connector:

for 0.28mm ID MXT® columns: cat.# 20396 (ea.)

for 0.53mm ID MXT® columns: cat.# 20395 (ea.)

The Gerstel GRAPHPACK® Connectors

- Metal jacket graphite ferrule is ideal for connecting metal or fused silica tubing.
- Advanced technology creates a leak-free, low dead volume connection.
- Quick and reliable connections decrease down-time.

The central component of this connector is a metal-jacketed graphite ferrule. The Gerstel GRAPHPACK® connector can be used for connecting metal capillary columns to fused silica capillary columns.

Product
Information
from Restek

US Environmental Protection Agency (EPA) Method 8270D outlines the analysis of semi-volatile organic pollutants in solid waste, soil, water, and air matrices using gas chromatography/mass spectrometry (GC/MS). Update IVA of the third edition of SW-846—Test Methods for Evaluating Solid Waste, Physical/Chemical Methods—includes EPA Method 8270D, in which there were no major revisions from EPA Method 8270C.

Restek chemists have carefully reviewed EPA methods 8270C and 8270D, and prepare analytical reference materials to include all of the most commonly calibrated compounds. The compounds have been grouped to provide flexibility, convenience, and maximum stability. Restek also offers all the required surrogate, internal standard, calibration check, matrix spike, and tuning mixtures required for these methods.

Semivolatile Organic Reference Materials

US EPA Methods 8270D/Appendix IX Target Compounds

Feature	Benefit
<ul style="list-style-type: none"> Carefully researched formulations. Data packs available. Calibration mixes available in two independent lots. 	<ul style="list-style-type: none"> Fewest solutions compatible with maximum shelf life and no chemical interactions. Complies with stringent audits. Assured agreement, ordering convenience.
8270C calibration mixtures are subdivided into separate solutions. These are:	
8270 MegaMix™	
76 components @ 1000µg/mL in methylene chloride:benzene (75:25), 3- & 4-methylphenol @ 500µg/mL, 1mL/ampul cat.# 31686	Calibrate for all components in one analysis – 3- & 4-methylphenol included at ½ concentration of other components. 18-month shelf life.*
8270 Matrix Spike Mix	
76 components @ 200µg/mL in methanol:methylene chloride:benzene (80:15:5), 3- & 4-methylphenol @ 100µg/mL, 5mL/ampul cat.# 31687	Calibrate for all components in one analysis – 3- & 4-methylphenol included at ½ concentration of other components. 18-month shelf life.*
8270 Benzidines Mix	
3 components @ 2000µg/mL in methanol, 1mL/ampul cat.# 31688	Contains commonly analyzed 8270C benzidine compounds. 37-month shelf life.*
605 Benzidines Calibration Mix	
2 components @ 2000µg/mL in methanol, 1mL/ampul cat.# 31030	Contains commonly analyzed 8270C benzidine compounds. 36-month shelf life.*
Appendix IX Mix #1	
18 basic compounds @ 2000µg/mL in methylene chloride, 1mL/ampul cat.# 31625	Most commonly analyzed Appendix IX basic compounds; add only as needed. 24-month shelf life.*
Appendix IX Mix #2	
32 components @ 2000µg/mL in benzene:methylene chloride (75:25), 1mL/ampul cat.# 31806	Most commonly analyzed Appendix IX compounds; add only as needed. 12-month shelf life.*
Organophosphorous Pesticide Mix, 8270/Appendix IX	
9 organophosphorous pesticides @ 2000µg/mL in methylene chloride, 1mL/ampul cat.# 32419	Most commonly analyzed 8270C/Appendix IX organophosphorous compounds; add only as needed. 36-month shelf life.*
Organochlorine Pesticide Mix AB #3	
20 organochlorine pesticides @ 2000µg/mL in hexane:toluene (1:1), 1mL/ampul cat.# 32415	Most commonly analyzed 8270C/Appendix IX organochlorine pesticides; add only as needed. 37-month shelf life.*
Organochlorine Pesticide Mix AB #1	
20 organochlorine pesticides @ 200µg/mL in hexane:toluene (1:1), 1mL/ampul cat.# 32291	Most commonly analyzed 8270C/Appendix IX organochlorine pesticides; add only as needed. 37-month shelf life.*
Organochlorine Pesticide Mix AB #2	
20 organochlorine pesticides @ 8-80µg/mL in hexane:toluene (1:1), 1mL/ampul cat.# 32292	Most commonly analyzed 8270C/Appendix IX organochlorine pesticides; add only as needed. 37-month shelf life.*

*Shelf life is based on an unopened ampul stored at the recommended temperature.

Semivolatile Organic Reference Materials

8270 MegaMix™ (76 components)

acenaphthene	2,4-dinitrophenol
acenaphthylene	2,4-dinitrotoluene
aniline	2,6-dinitrotoluene
anthracene	di-n-butyl phthalate
azobenzene ¹	di-n-octyl phthalate
benzo(a)anthracene	diphenylamine ²
benzo(a)pyrene	fluorene
benz(b)fluoranthene	fluoranthene
benzo(ghi)perylene	hexachlorobenzene
benzo(k)fluoranthene	hexachlorobutadiene
benzyl alcohol	hexachlorocyclopentadiene
benzyl butyl phthalate	hexachloroethane
bis 2-ethylhexyl adipate	indeno(1,2,3-cd)pyrene
bis(2-chloroethoxy)methane	isophorone
bis(2-chloroethyl)ether	1-methylnaphthalene
bis(2-chloroisopropyl)ether	2-methylnaphthalene
bis(2-ethylhexyl)phthalate	2-methylphenol
4-bromophenyl phenyl ether	3-methylphenol*
carbazole	4-methylphenol*
4-chloroaniline	naphthalene
4-chloro-3-methylphenol	2-nitroaniline
2-chloronaphthalene	3-nitroaniline
2-chlorophenol	4-nitroaniline
4-chlorophenyl phenyl ether	nitrobenzene
chrysene	2-nitrophenol
dibenz(a,h)anthracene	4-nitrophenol
dibenzofuran	N-nitrosodimethylamine
1,2-dichlorobenzene	N-nitroso-di-n-propylamine
1,3-dichlorobenzene	pentachlorophenol
1,4-dichlorobenzene	phenanthrene
2,4-dichlorophenol	phenol
diethyl phthalate	pyrene
dimethyl phthalate	pyridine
2,4-dimethylphenol	2,3,4,6-tetrachlorophenol
1,2-dinitrobenzene	2,3,5,6-tetrachlorophenol
1,3-dinitrobenzene	1,2,4-trichlorobenzene
1,4-dinitrobenzene	2,4,5-trichlorophenol
4,6-dinitro-2-methylphenol	2,4,6-trichlorophenol

1,000µg/mL each (except where noted) in methylene chloride:benzene (75:25), 1mL/ampul

Rtx®-5Sil MS Columns for Semivolatiles Analyses

- Silylarylene stationary phase designed to provide low GC/MS bleed.
- Optimized for US EPA Method 8270 semivolatiles.
- Improved separation of benzo(b)- and benzo(k)fluoranthene.
- Available in 0.28mm ID for optimal semivolatiles analysis.
- Similar to DB-5MS, HP-5TH, BPX-5, MDN-5S columns.
- Available with Integra-Guard™ built-in guard column.

(Similar selectivity to Crossbond® 5% diphenyl/95% dimethyl polysiloxane)

EPA Method 8260B

US Environmental Protection Agency (EPA) Method 8260B outlines the analysis of volatile organic pollutants in solid waste and water samples using purge and trap concentration or direct injection with high resolution capillary gas chromatography/mass spectrometry detection (GC/MS). Method 8260B supersedes EPA Methods 8240 and 8260A. The compound lists are similar, however, this new method introduces several compounds that we have included in the 8260B mix.

Restek has carefully reviewed Method 8260B and has prepared a comprehensive product listing to meet most laboratories' needs. Our new standards for Method 8260B include the most commonly analyzed compounds. If your list contains any compounds not in our comprehensive listing, we would be happy to provide custom mixtures to meet your specific compound list.

We continue to offer our original 8260 and 8240 calibration mixtures to laboratories calibrating for the 8260B short lists. Restek also offers all the required surrogate, internal standard, calibration check, matrix spike, and tuning mixtures required for this method; and can provide custom mixtures for specific needs.

Reference Materials for Volatile Organic Compounds

US EPA Method 8260B

- ✓ Fewest mixtures needed for calibration
- ✓ Mixtures formulated for maximum stability
- ✓ Contains the most commonly run compounds

8260B Calibration Mixtures

Feature	Benefit
These eight 8260B calibration mixtures include the most commonly calibrated 8260B target compounds	<i>Maximum shelf life and no chemical interactions, with the smallest number of solutions possible.</i>
76+1-Component mixture @ 2000µg/mL each in P&T methanol. 8260B MegaMix™ Calibration Mix cat.# 30475	<i>Contains most commonly analyzed 8260B target compounds. Maximum shelf life* = 24 months. 2-chloroethyl vinyl ether is provided in a separate ampul.</i>
6-Component gas mixture @ 2000µg/mL each in P&T methanol. 502.2 Calibration Mix #1 cat.# 30042	<i>Contains six room-temperature gases in a separate ampul for ease in preparing working standards. Maximum shelf life* = 36 months.</i>
4-Component ketone mix @ 5000µg/mL each in P&T methanol/water (90:10). VOA Calibration Mix #1 cat.# 30006	<i>Contains four ketones in a separate ampul for maximum shelf life. Maximum shelf life* = 36 months.</i>
5-Component acetate mix @ 2000µg/mL each in P&T methanol. 8260B Acetate Mix cat.# 30477	<i>Contains five acetates in a separate ampul for maximum shelf life. Maximum shelf life* = 24 months.</i>
5 Oxygenated compounds in P&T methanol. California Oxygenates Mix cat.# 30465	<i>Contains five of the most commonly analyzed oxygenated compounds in a separate ampul for maximum calibration flexibility. Maximum shelf life* = 36 months.</i>
Ethanol at 10,000µg/mL in water. Ethanol cat.# 30466	<i>A high-concentration ethanol mix suitable for direct injection or P&T. Maximum shelf life* = 36 months.</i>
Acrolein at 10,000µg/mL in P&T methanol.* Acrolein cat.# 30499	<i>An individual, high-concentration acrolein standard for maximum stability and calibration flexibility. Maximum shelf life* = 6 months.</i>
1,2-Dichlorotetrafluoroethane @ 2000µg/mL in P&T methanol 1,2-Dichlorotetrafluoroethane cat.# 30476	<i>An individual Freon® 114 mixture for calibration flexibility. Maximum shelf life* = 36 months.</i>

*Also available in water (cat# 30478).

*Shelf life is based on an unopened ampul stored at the recommended temperature.

8000 Series— Solid Waste—Volatiles

Xylene-Free, Highly-Purified Chloroprene Standard

The R&D chemists at Restek developed a novel procedure that produces a pure, quantitative chloroprene solution specially stabilized in purge & trap-grade methanol. The entire procedure is performed under carefully monitored conditions to prevent any contamination or polymerization of the highly reactive, neat chloroprene. The final solution is specially stabilized, allowing analysts to make dilutions for working standards in unmodified purge & trap-grade methanol.

The working level dilution of this product, combined with all other 8240 compounds (8240 VOA Kit, cat.# 30232), has been tested using purge & trap GC/MS. Thorough evaluation of the resultant data indicates that working level solutions may be prepared weekly, by mixing all of the 8240 calibration mixtures with the chloroprene mixture, and diluting to volume with purge & trap-grade methanol. No special care, other than the use of clean glassware and pure purge & trap-grade methanol, is required for the preparation of stable solutions. A detailed instruction sheet is included for persons analyzing modified 8240 target compound lists.

Chloroprene

Antifoam Agent for Purge & Trap Samples

Foam generated as purge gas passes through a sample can enter the analytical trap, and possibly into the GC column. Our silica-containing antifoam agent will be of great help to analysts performing VOC analysis. It's effective over a wide pH range, and will not conflict with chromatography of target analytes.

Neat, 1mL/ampul

Each	5-pk.

Restek's Innovative Piston Seal Removal and Insertion tool

Do you have to search for a paper clip or screw to remove those old, worn seals from your HPLC pump? Then, once you get the old seal out, do you struggle to correctly seat and insert the new seal? Now Restek has one tool that can help. Use one end to remove your old seal, then simply slip your new seal on the other end and push the new seal flush into position. The material used in this tool will not mar the surrounding metal surface of your pump housing.

HPLC Accessories

Secure-Fit Column Connectors

Making a good connection between HPLC components is necessary for accurate quantification. The new Secure-Fit connectors from Restek and Selerity Technologies ensure a consistent, leak-free seal and eliminate voids! An internal spring mechanism holds the capillary tube at the proper depth in the female fitting. This seal is maintained while finger-tightening the nut. This product can be purchased in stainless steel or in PEEK and comes in a variety of tubing lengths and internal diameters (ID).

Degasys In-Line Mobile Phase Degasser

Dissolved oxygen has an adverse affect on HPLC analyses: Flow rate instability and increased baseline noise can result. Also, it has a quenching affect on fluorescence detection and increases the background of UV detectors. Dissolved gases can out-gas in the HPLC system, causing bubbles in check valves, at connections, or in detector flow cells.

In-line vacuum degassing has been shown to be more effective at removing dissolved gas from mobile phases than sonication or helium sparging. In-line degassers work by withdrawing gas from a semi-permeable membrane encased in a sealed chamber. Traditionally, the membrane was made of PTFE tubing, but the Degasys Ultimate Degasser uses tubing composed of an amorphous fluoropolymer. This material is 200 to 300 times more gas permeable than PTFE. This translates into the ability to use shorter tubing for the removal of dissolved gas. This new material also provides better tubular burst strength than PTFE. In addition to using this new tubing material, each channel on this Degasys unit is individually encased within its own vacuum chamber to prevent any cross-contamination.

Specifications:

Residual Oxygen ¹	Pressure Loss ¹	Internal Volume	Wetted Parts	Max. Flow Rate

LC/MS Generator

The Parker N2-15 generator incorporates an oil-less air compressor and membrane nitrogen generator assembled as a package specifically to feed LC/MS systems. The N2-15 produces 15 liters-per-minute at 99% purity. The N2-15 generator is an ideal, safe, and less expensive long-term alternative than nitrogen cylinders or bulky dewars.

The N2-15 generator is a convenient, inexpensive solution to high-volume nitrogen generation. Previously a compressor and generator would have to be purchased separately. Often the end-users were responsible for installing and interfacing the compressor and generator. The cost of a reasonable system was well in excess of \$20,000. Now the N2-15 generator solves the installation and set-up difficulties at a very attractive price.

Check Valves

Restek offers Analytical Science Instruments (ASI) check valves and piston seals for Agilent and Waters mobile phase pumps. ASI specializes in HPLC system components, and parts that often exceed the original equipment manufacturers' requirements.

ASI subjects each valve to a rigorous series of tests. Each valve is tested for its self-priming capability, which means you won't need a syringe or draw-off valves to prime your pump. Simply open the pump outlet and start the pump, the valve will prime itself—even if the transfer lines are completely dry! Next, the valve goes through both a high-pressure and a low-pressure test. The high-pressure test ensures that the valve will not leak, even at pressures up to 12,000psi. The low-pressure test verifies that the valve closes properly, even without the presence of a high backpressure force. The cartridge design allows easy replacement of worn or damaged valves.

LO-Pulse® Pulse Damper (type 316 SS)

The LO-Pulse® Pulse Damper is a patented, wide-dynamic-range device that smooths pulsations and maintains constant flow at system pressures up to 6,000psi.

The flow path volume is only 0.9mL and the path is designed to ensure that it is completely swept, eliminating solvent memory effects when changing mobile phases.

The pulse damper also is available in a space-saving, economical kit. The kit includes attachment hardware for mounting the pulse damper on a bracket, or for installing feet on it for bench-top use.

Ultra Aqueous C18 HPLC Columns

Achieve Stable Retention in 100% Aqueous Mobile Phase

The Ultra Aqueous C18 HPLC column provides reproducible retention times and can be used with highly aqueous mobile phases, which may eliminate the need for sample derivitization or ion pairing reagents. This column features a true C18 alkyl bonded phase, meeting the requirements of a US Pharmacopoeia (USP) L1 stationary phase.

Many traditional C18 alkyl stationary phases exhibit a loss in retention over time when exposed to highly aqueous mobile phases. This retention time loss is even more pronounced if the mobile phase flow is stopped and restarted. One theory explaining this loss in retention is “chain folding,” where extremely hydrophobic alkyl chains of a traditional C18 phase fold down upon the surface of the silica to avoid the hydrophilic aqueous mobile phase environment. In turn, the folded C18 chains diminish the amount of hydrophobic interaction that occurs between sample analytes and the stationary phase, resulting in a loss of analyte retention.

Restek scientists however, use a novel bonding chemistry for the Ultra Aqueous C18 column that results in polar groups at the silica surface. These surface polar groups keep the alkyl stationary phase extended, and thus wetted by the mobile phase—even when using up to 100% aqueous mobile phases (Figure 1). Additionally, although the Ultra Aqueous C18 column behaves similarly to a traditional base-deactivated C18 column when analyzing neutral hydrophobic compounds, it has enhanced retention and unique selectivity for polar and basic compounds (Figure 2).

Features & Benefits

Feature	Benefit
Analyzes polar compounds by reversed phase.	Retains compounds such as amino acids and water soluble vitamins using simple mobile phases and without derivitization.
Analyzes polar, hydrophilic materials without retention time loss. Stable retention in 100% aqueous mobile phases.	Can analyze compounds that are sparingly soluble in organic solvents.
True C18 alkyl bonded phase.	Meets requirements of USP L1.
High-density C18 ligand coverage.	Similar selectivity as traditional C18 phases for neutral hydrophobic compounds.
Unique secondary polar characteristics.	End-capping diminishes peak tailing observed from exposed silanol sites on the silica surface.

Commonly Asked Questions

• How is the Ultra Aqueous C18 column different from traditional C18 columns?

The Ultra Aqueous C18 column has a true C18 alkyl linkage to a high-surface-area Type B silica support. This is different from traditional C18 phases because Restek uses a novel bonding process that results in a polar group attached to the silica surface. It is this secondary process with the polar functional groups that makes the Ultra Aqueous C18 column unique and allows it to be used in highly aqueous mobile phases.

• How is Restek's Ultra Aqueous C18 column different from other brands of highly aqueous stationary phases?

There are several approaches to designing aqueous stationary phases. Some of the older types of highly aqueous stationary phases used a low-density bonding of the C18 ligand, unintentionally leaving exposed silanol sites. These silanol sites helped to create a hydrophilic surface that kept the alkyl chains suspended. However, the very reactive silanol sites could cause severe peak tailing of basic analytes. Another avenue manufacturers have taken is to cross-link the C18 chains, creating a physical hindrance that would prevent the alkyl chains from collapse. This process has been successful, but creates problems in trying to perform a secondary end-capping procedure, so many reactive silanol sites may remain. The Restek process successfully achieves secondary polar end-capping that provides a hydrophilic environment that prevents the hydrophobic alkyl chain from folding.

• What are the particle and pore sizes of the silica used for the Ultra Aqueous C18 column?

The Ultra Aqueous C18 is available in 3µm or 5µm spherical, Type B silica with a 100Å pore size.

• What are the temperature and pH ranges of the Ultra Aqueous C18 column?

Temp. limits: Up to 80°C pH limits: 2.5 -7.5

• Are guard cartridges available for the Ultra Aqueous C18 column?

Yes. The Ultra Aqueous C18 column is available as part of the Restek **Integral Trident™ guard system**, which is one of the most efficient guard systems on the market. Or it is available as part of our **Trident™ Direct guard system**, Restek's efficient, universal guard cartridge and holder system.

Also available in 3µm.
Call for details.

FAST FACTS

At-a-Glance
Product
Information
from Restek

Restek analytical reference materials for explosives are formulated to support nitroaromatic, nitroamine, and nitroester analyses. These materials can be analyzed using high performance liquid chromatography (HPLC-UV) according to US EPA Method 8330¹ or using gas chromatography (GC-ECD) according to Method 8095², developed by the US Army Cold Regions Research and Engineering Laboratory.³

EPA Method 8095 includes all the Method 8330 target compounds, plus 3,5-dinitroaniline, nitroglycerin, and pentaerythritol tetranitrate (PETN). Our Method 8095 calibration mixtures contain the additional components at the concentration ratios appropriate for ECD.

Compounds listed are explosives, intermediates that are used in the manufacture of explosives, or degradation products of explosive compounds.

- # Ethanol Analytical Reference Standards for Blood Alcohol Testing

- NIST-traceable ethanol calibration standards from 0.015g/dL to 0.4g/dL in water.
 - Eight-component resolution control standard with NIST-certified ethanol concentration.
 - Datapack and Certificate of Analysis provided with each standard.

Legal limits for blood alcohol in the United States are set at either 0.080 or 0.100g/dL. We offer high- and low-concentration standards so that laboratories can construct calibration curves that bracket either legal limit concentration. In addition, we offer 0.015g/dL and 0.025g/dL concentrations, which are important in “zero-tolerance” cases involving minors or convicted DUI offenders.

These standards are National Institute of Standards and Technology (NIST)-traceable and are shipped with a complete data pack that includes a Certificate of Analysis, copies of all raw material testing results, statistical QA results, analytical balance printout, and a lot sheet showing gravimetric weight of each analyte.

Use our Resolution Control Standard mix to verify the retention time for each compound normally detected in a blood alcohol test, and to verify that the compounds are resolved from and do not interfere with each other. Each compound in this resolution mix is 0.100g/dL. The ethanol concentration is an NIST-traceable certified value.

We also offer Rtx®-BAC1 and Rtx®-BAC2 columns, which can resolve a blood alcohol sample in less than 3 minutes. If you have any questions about blood alcohol methods, or these products, please contact our Technical Service Team at support@restekcorp.com or via phone at 800-356-1688 or 814-353-1300, ext. 4. To order call ext. 3.

12 Steps Separating Restek from the rest through 12 critical steps.

1. Review method requirements
2. Verify compatibility and stability
3. Test starting materials
4. Certify balance and weights
5. Deactivate glassware and ampuls
6. Prepare two independent lots
7. Assay to assure quality
8. Assign real-time expiration date
9. Use customer friendly packaging (includes extra vial and label)
10. Include Restek documentation
11. Comply with ISO 9001 registration
12. Offer custom reference materials program

Calibration Standards for ASTM Method D2887-01, Boiling Range Distribution of Petroleum Products

Lit. Cat. #59383A

- ✓ Meet requirements for the 2001 revision of ASTM 2887-01.
- ✓ Pentane added.
- ✓ Equal weight/weight concentrations of all components.
- ✓ Designed for both calibration and resolution tests— one sample for both test criteria.

American Society for Testing and Materials (ASTM International) Method D2887-01, *Standard Test Method for Boiling Range Distribution of Petroleum Fractions by Gas Chromatography*, describes the determination of the boiling range distribution of petroleum products. This test method is applicable to petroleum products and fractions having a final boiling point of 538°C (1000°F) or lower; and is limited to samples having a boiling range greater than 55°C (100°F) and having a vapor pressure sufficiently low to permit sampling at ambient temperature.

To facilitate the ASTM International guideline and help petroleum analytical laboratories in determining petroleum product boiling range applications, Restek has introduced two chemical standards designed specifically for ASTM Method D2887-01. The first mixture is prepared at 1% w/w in carbon disulfide for convenient laboratory use. This standard may only be shipped by ground shipment within the US. The second mixture is a blend of neat hydrocarbons to allow overnight shipments in the US and shipments to our international customers.

This method is not to be used for the analysis of gasoline samples or gasoline range petroleum products. These types of samples must be analyzed by ASTM Method D3710-95. Restek offers a calibration mixture for ASTM D-3710-95. (cat.# 31223, single ampul, and cat.# 31323, 10-pack with data pack)

In addition, Restek offers chemical standards for other ASTM Methods: D6352-98 (Polywax®); E1387-95 and E1618-97 (fire debris); and D-4059-96 (PCBs in transformer oil). Restek also makes custom chemical standard solutions for a wide variety of ASTM Methods — see the reverse side of this *Fast Facts* for information.

ASTM D2887-01 Hydrocarbon Mixture in Carbon Disulfide

1% w/w each component in carbon disulfide, 1mL/ampul

	cat.#/Each	5-pk.	10-pk.
w/ampul	31674	31674-510	—
w/data pack	31674-500	31674-520	31774

Solvent-Free ASTM D2887-01 Hydrocarbon Mixture

5% w/w each component*, 1g/5mL ampul

	cat.#/Each	5-pk.	10-pk.
w/ampul	31675	31675-510	—
w/data pack	31675-500	31675-520	31775

*This mixture may be diluted by the analyst with 4g carbon disulfide to achieve a concentration of 1% w/w.

Certified PAHs in Composite Diesel Fuel #2

Lit. Cat. #59384B

- ✓ Confirm diesel #2 TPH and priority PAHs in a single analysis.
- ✓ Certificate of Analysis includes concentration of TPH and certified concentrations of individual PAHs.
- ✓ Complete data pack available.

There is great concern about environmental pollution caused by polynuclear aromatic hydrocarbons (PAHs) from diesel fuel: diesel internal combustion engines produce exhaust emissions that pollute the air; diesel fuel that leaks while in storage or spills during transportation will pollute soil and water systems. To address the latter issue, the US Environmental Protection Agency (EPA) Underground Storage Tank (UST) program has been enforcing the federal rules in monitoring and assessing diesel fuel contamination in soil and water systems. In addition, the American Society for Testing and Materials (ASTM International) has developed analytical methods and procedures for priority PAHs in fuels.

To help analytical laboratories accurately quantify and characterize PAHs in diesel fuel, Restek offers a reference material—Certified PAHs in Composite Diesel Fuel #2. Prepared from diesel #2 composite, this standard is suitable for checking both diesel #2 total petroleum hydrocarbons (TPH) and PAH calibrations in one analysis. After preparation and packaging, the concentration of each priority PAH compound is certified by GC/MS analysis. The complete data pack includes all gravimetric, QC, and calibration data.

Also available:

Certified Aromatics/BTEX in Unleaded Gasoline

- ✓ Confirm unleaded gasoline TPH, BTEX, and aromatics in a single analysis.
- ✓ Certificate of Analysis includes concentration of TPH and certified concentrations of BTEX and individual aromatics.
- ✓ Complete data pack available.

Certified BTEX in Composite Unleaded Gasoline and Certified Aromatics in Composite Gasoline are prepared from unleaded gasoline composites. After preparation and packaging, the concentration of each aromatic compound is certified by GC/MS analysis. The complete data pack includes all gravimetric, QC, and calibration data.

FAST FACTS

At-a-Glance
Product
Information
from Restek

Sugar analysis is important in the generation of nutrition panels, as both the sugar content and the total carbohydrate content must be included. Simple sugars include mono- and disaccharides such as fructose, glucose, sucrose, maltose, and lactose. In foods and beverages, they provide sweetness, texture, and color development. The perceived sweetness of each sugar is different in terms of character, intensity, and duration. Therefore, the ability to profile the individual mono- and disaccharides is important to the food chemist. Methods exist for the quantification of individual sugar species, as well as for the determination of total sugar content. The new Pinnacle II™ Amino column is ideal for these sugar analyses. HPLC analysis using an amino-based stationary phase is the most popular technique for the routine analyses of simple sugars. This analysis uses isocratic elution (e.g., water:acetonitrile, 25:75) and a refractive index detector (RI). Review Figures 1 through 3 to see how the new Pinnacle II™ Amino column can achieve good resolution of common sugars.

Another sugar, lactulose, is a common laxative ingredient. The test method for this compound is prescribed in the United States Pharmacopoeia (USP 25). The assay calls for an analytical column with an L8 (propylamino) stationary phase bonded to 3µm particle silica, and use of refractive index detection. The new Pinnacle II™ Amino column allows excellent quantification and peak shape for lactulose. Observe the lactulose chromatogram analyzed per the USP monograph in Figure 4.

Information
from Restek

To help laboratories comply with and use these analytical procedures, Restek has been active in following the state guidance. Based on our good knowledge of the methods, our experienced chemists have developed a list of the appropriate technical service tools and analytical products to achieve success with these methods. We offer quality chromatographic columns, analytical reference materials, and sample preparation products.

In this comprehensive product listing, you will find everything you need to quickly set up or reorder consumables for these methods. Please refer to our latest product catalog or call 800-356-1688 or 814-353-1300, ext. 3, for more information. Also, we will be happy to provide a quote on any custom consumable you may need!

State of Massachusetts UST Monitoring

- ✓ Comprehensive products listing for the latest UST methods used by the State of Massachusetts.
- ✓ Products conveniently organized by method number.
- ✓ Easy method set-up and reorder of consumables, including:
 - Gas chromatography columns and accessories,
 - Analytical reference materials,
 - Sample preparation supplies,
 - Technical service.

To comply with federal Underground Storage Tank (UST) rules, the Massachusetts Department of Environmental Protection (MADEP) proposed a new toxicological approach to characterize petroleum-contaminated media in August 1994. Under this approach, the toxicity of petroleum-contaminated media is defined by (a) the individual concentrations of targeted petroleum constituents, such as BTEX and PAH compounds, and (b) the collective concentrations of (remaining) aliphatic and aromatic hydrocarbons, within defined carbon ranges.

To provide data to support and complement this new toxicological approach, MADEP issued two draft analytical methods in August 1995. The two methods were needed to cover the range of hydrocarbons of concern; volatile petroleum hydrocarbons (VPH) and extractable petroleum hydrocarbons (EPH). In January 1998 MADEP published the final VPH and EPH methods for environmental analytical laboratories.

The VPH test method is a purge-and-trap GC procedure that detects hydrocarbons in the C5-C12 range. It can be used to separate the gasoline range organics (GRO) into three sub-fractions, C5-C8 aliphatic hydrocarbons, C9-C12 aliphatic hydrocarbons and C9-C10 aromatic hydrocarbons and 8 target compounds (BTEX, MTBE, and naphthalene).

The EPH method quantitates hydrocarbons heavier than nonane (C9). It separates the total petroleum hydrocarbons (THP) into three sub-fractions: C9-C18 aliphatic hydrocarbons, C19-C36 aliphatic hydrocarbons, and C11-C22 aromatic hydrocarbons and 17 polynuclear aromatic hydrocarbons (PAHs).

In addition, MADEP has been developing a new method for airborne petroleum hydrocarbons (APH) and is in the process of collecting public comments. We will offer appropriate analytical product and service for MADEP APH as soon as it is finalized.

Drilled Uniliner®	4.0 ID, 6.3 OD x 78.5	21054	21055
1mm Split**	1.0 ID, 6.3 OD x 78.5	20972	20973

*Restek design improves performance over the original Agilent Liner.

**Use this liner for increased sensitivity.

Low Volume Injector for Agilent GCs

Description	kit.
Low-Volume Injector for Agilent Split/Splitless GC Inlets	21692

Analytical Reference Materials:

MA VPH (Jan. 1998)

To measure the collective concentrations of volatile aliphatic and aromatic petroleum hydrocarbons in water and soil. The method is based on a purge and trap, gas chromatography procedure with PID/FID in series for detection.

Calibration Mixtures

MA Volatile Petroleum Hydrocarbon (VPH) Standard

n-pentane (C5)	1,000µg/mL	naphthalene	1,000
n-nonane (C9)	1,000	toluene	1,500
benzene	500	1,2,4-trimethylbenzene	1,000
ethylbenzene	500	m-xylene	1,000
isooctane	1,500	o-xylene	1,000
2-methylpentane	1,500	p-xylene	1,000
methyl tert-butyl ether	1,500		

In P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30434	30434-510	
w/data pack	30434-520	30534

MA VPH Standard with Surrogate

n-pentane (C5)	1,000µg/mL	methyl tert-butyl ether	1,500
n-nonane (C9)	1,000	naphthalene	1,000
benzene	500	toluene	1,500
2,5-dibromotoluene (surrogate)	1,000	1,2,4-trimethylbenzene	1,000
ethylbenzene	500	m-xylene	1,000
isooctane	1,500	o-xylene	1,000
2-methylpentane	1,500	p-xylene	1,000

In P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30452	30452-510	
w/data pack	30452-500	30552

Surrogate Mixtures

MA VPH Surrogate Standard

2,5-dibromotoluene

1,000µg/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30435	30435-510	
w/data pack	30435-500	30535

10,000µg/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30453	30453-510	
w/data pack	30453-500	30553

Matrix Spike Mixtures

MA VPH Matrix Spike Mix with Surrogate

n-pentane (C5)	ethylbenzene	toluene
n-nonane (C9)	isooctane	1,2,4-trimethylbenzene
benzene	2-methylpentane	m-xylene
2,5-dibromotoluene (surrogate)	methyl tert-butyl ether	o-xylene
	naphthalene	p-xylene

2,500µg/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30454	30454-510	
w/data pack	30454-500	30554

Petroleum Reference Mixtures Pattern Recognition Mixtures

Unleaded Gasoline Composite Standard

2,500 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30081	30081-510	
w/data pack	30081-500	30181

50,000 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30205	30205-510	
w/data pack	30205-500	30305

50,000 μ g/mL in P&T methanol, 5mL/ampul

Each	5-pk.	10-pk.
30206	30206-510	
w/data pack	30206-500	30306

Analytical Reference Materials:

MA EPH (Jan. 1998)

To measure the collective concentrations of volatile aliphatic and aromatic petroleum hydrocarbons in water and soil. The method is based on a solvent extraction, silica gel solid-phase extraction/fractionation (SPE), gas chromatography procedure with FID detection.

Calibration Mixtures

MA EPH Aromatic Hydrocarbon Standard

acenaphthene	dibenzo(a,h)anthracene
acenaphthylene	fluoranthene
anthracene	fluorene
benzo(a)anthracene	indeno(1,2,3-cd)pyrene
benzo(a)pyrene	2-methylnaphthalene
benzo(b)fluoranthene	naphthalene
benzo(k)fluoranthene	phenanthrene
benzo(ghi)perylene	pyrene
chrysene	

1,000 μ g/mL each in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31458	31458-510	
w/data pack	31458-500	31558

MA EPH Aliphatic Hydrocarbon Standard

<i>n</i> -nonane (C9)	<i>n</i> -eicosane (C20)
<i>n</i> -decane (C10)	<i>n</i> -docosane (C22)
<i>n</i> -dodecane (C12)	<i>n</i> -tetracosane (C24)
<i>n</i> -tetradecane (C14)	<i>n</i> -hexacosane (C26)
<i>n</i> -hexadecane (C16)	<i>n</i> -octacosane (C28)
<i>n</i> -octadecane (C18)	<i>n</i> -triacosane (C30)
<i>n</i> -nonadecane (C19)	<i>n</i> -hexatriacosane (C36)

1,000 μ g/mL each in hexane, 1mL/ampul

Each	5-pk.	10-pk.
31459	31459-510	
w/data pack	31459-500	31559

Analytical Reference Materials:

MA EPH (cont.)

Surrogate Spike Mixtures

MA EPH Surrogate Spike Mix

1-chlorooctadecane o-terphenyl

4,000 μ g/mL each in acetone, 1mL/ampul

Each	5-pk.	10-pk.
31479	31479-510	
w/data pack	31479-500	31579

MA Fractionation Surrogate Spike Mix

2-bromonaphthalene 2-fluorobiphenyl

4,000 μ g/mL each in hexane, 1mL/ampul

Each	5-pk.	10-pk.
31480	31480-510	
w/data pack	31480-500	31580

Internal Standards

5- α -androstane

2,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.

Other Certified Fuel Standards

Save time—use these standards to perform calibration checks for TPH and aromatics in a single analysis.

Certified BTEX in Unleaded Gas Composite Standard

Certified for:	toluene
benzene	<i>m</i> -xylene
ethylbenzene	<i>o</i> -xylene
isopropyl benzene	<i>p</i> -xylene
methyl <i>tert</i> -butyl ether	
naphthalene	

5,500ppm gasoline in P&T methanol, certified components listed, 1mL/ampul

Each	5-pk.	10-pk.
30237	30237-510	
w/data pack	30237-500	30337

Certified Aromatics in Gasoline

Certified for:	<i>n</i> -propylbenzene
benzene	toluene
ethylbenzene	1,2,3-trimethylbenzene
<i>m</i> -ethyltoluene	1,2,4-trimethylbenzene
<i>o</i> -ethyltoluene	1,3,5-trimethylbenzene
<i>p</i> -ethyltoluene	<i>m</i> -xylene
isopropylbenzene	<i>o</i> -xylene
methyl <i>tert</i> -butyl ether	<i>p</i> -xylene
naphthalene	

5,500ppm gasoline in P&T methanol, certified components listed, 1mL/ampul

Each	5-pk.	10-pk.
30485	30485-510	
w/data pack	30485-500	30585

Certified PAHs in Diesel #2

Certified PAHs and Typical Certified Conc. (ppm)

acenaphthene	7	1-methylnaphthalene	110
acenaphthylene	1	2-methylnaphthalene	60
anthracene	13	naphthalene	30
fluorene	6	phenanthrene	13

50,000ppm diesel #2 in methylene chloride,
PAH concentrations listed above, 1mL/ampul

Each	5-pk.	10-pk.
31673	31673-510	
w/data pack	31673-500	31773

EPA Methods

for Massachusetts UST Applications

To complement the MA-EPH and MA-VPH methods, analyses for individual target compounds, such as benzene, toluene, naphthalene, and other aromatics, are included in EPA Methods 8021, 8260 or 8270. Please request our EPA UST *Fast Facts* (Lit. Cat. #59397) for complete product listings.

Fuel and Certified Fuel Standards

We offer a wide variety of composite and single-source fuel standards to meet your needs. Please see our general chromatography product catalog for detailed listings of the following:

Aviation Gasoline

JP-4 Military Fuel

Jet Fuel A

JP-5 Military Fuel

Fuel Oil #4

JP-8 Military Fuel

Fuel Oil #5

Mineral Spirits

Fuel Oil #6

Certified PAHs in Motor Oil

Product
Information
from Restek

To help laboratories comply with and use these analytical procedures, Restek has been active in following the state guidance. Based on our good knowledge of the methods, our experienced chemists have developed a list of the appropriate technical service tools and analytical products to achieve success with these methods. We offer quality chromatographic columns, analytical reference materials, and sample preparation products.

In this comprehensive product listing, you will find everything you need to quickly set up or reorder consumables for these methods. Please refer to our latest product catalog or call 800-356-1688 or 814-353-1300, ext. 3, for more information. Also, we will be happy to provide a quote on any custom consumable you may need!

State of Wisconsin UST Monitoring

- ✓ Comprehensive products listing for the latest UST methods used by the State of Wisconsin.
- ✓ Products conveniently organized by method number.
- ✓ Easy method set-up and reorder of consumables, including:
 - Gas chromatography columns and accessories,
 - Analytical reference materials,
 - Sample preparation supplies,
 - Technical service.

In 1992 the Wisconsin Department of Natural Resources (WDNR) published its technical guidance in assessing and closing underground storage tanks (UST). In accordance with Wisconsin state law and applicable US Environmental Protection Agency (EPA) UST site assessment requirements, WDNR requires site assessment to determine if a release has occurred from a UST System. In the technical guidance, WDNR released the first versions of modified gasoline range organic (GRO) and diesel range organic (DRO) methods. In September 1995, WDNR approved the modified GRO and DRO methods. These two methods, known as Wisconsin GRO and DRO, have been used in various laboratories since 1996; they are popular analytical procedures, not only in the State of Wisconsin but also in many other states.

The GRO method is based on purge and trap GC/FID/PID analysis and is designed to measure the concentration of GROs (C6-C10) and petroleum volatile organic compounds (PVOCs) in water or soil. The DRO method is based on solvent extraction GC/FID and is designed to measure the concentration of diesel range organics (C10-C28) in water, soil, or waste. DRO also can be used to measure kerosene, motor oil, or lubricant oil.

Gas Chromatography Columns & Accessories

For these items, see Restek's
Chromatography Products Catalog:

- Syringes
- Autosampler Vials
- Guard Columns
- Ferrules, Septa

Recommended Gas Chromatography Columns

Rtx®-5, 30m x 0.25mm

Film Thickness	temp. limits	Cat. #
0.25µm	-60 to 330/350°C	10223
0.50µm	-60 to 330/350°C	10238
1.00µm	-60 to 320/340°C	10253

Integra-Guard Columns

Guard and analytical column in one connectionless length.

*Add the appropriate suffix number to analytical column catalog number.

ID	Length	Suffix #*
0.25mm	5m	-124
	10m	-127

Syringes

Standard Micro-Liter Syringes for Agilent 7673 and 7683 Autosamplers

Size	Needle Gauge	6-pk.
10µL	23s	20169
10µL	23s-26s	24600

Autosampler Vials

Crimp Top Vial Snap Seal™ Style (12 x 32mm, 11mm Crimp)

Description*	1,000-pk.
2.0mL Clear Glass Vial w/White Graduated Marking Spot	24384
2.0mL Amber Glass Vial w/White Graduated Marking Spot	24386

*Marking spots are available on request in blue, green, rust or yellow.

Aluminum Crimp Seals w/Septa

Description	1,000-pk.
Silver Seal, PTFE/Natural Rubber Septa	21175
Silver Seal, PTFE/Silicone Septa*	24360

*PTFE/Silicone/PTFE available on request.

Thermolite® Septa

Size	temp. limits	25-pk.	50-pk.	100-pk.
11mm (7/16")	to 340°C	20363	20364	20365

Replacement Inlet Seals

Stainless Steel Inlet Seal for Single-Column Installation*

Size	2-pk.	10-pk.
0.8mm ID	21315	21316

*Equivalent to Agilent Part# 18740-20880.

Inlet Liners

For Agilent GCs

Description	ID /OD & Length (mm)	ea.	5-pk.
Uniliner®*	4.0 ID, 6.3 OD x 78.5	20335	20336

1mm Split**	1.0 ID, 6.3 OD x 78.5	20972	20973

*Restek design improves performance over the original Agilent Liner.

**Use this liner for increased sensitivity.

Low Volume Injector for Agilent GCs

Description	kit.
Low-Volume Injector for Agilent Split/Splitless GC Inlets	21692

Analytical Reference Materials:

WI GRO (Sept. 1995)

The method is designed to measure concentrations of gasoline range organics (GRO) (C6-C10) in water or soil. Petroleum volatile organic compounds (PVCs) can be determined concurrently by this method. It is based on purge and trap, GC/FID procedure. FID/PID in series is used for GRO/PVCs concurrently.

Motor Oil Composite Standard

This composite solution is prepared from an equal volume blend of the following types of motor oil: 5W30, 10W30, 10W40, and 20W50. After blending, a precisely weighed amount of the composite is added to a volumetric flask to produce a mixture at 50,000 μ g/mL in methylene chloride, 1mL/ampul.

Each	5-pk.	10-pk.
31464	31464-510	
w/data pack	31464-500	31564

Used Motor Oil Composite Standard

This composite solution is prepared from an equal volume blend from five gasoline powered vehicles (belonging to Restek employees). After blending, a precisely weighed amount of the composite is added to a volumetric flask to produce a mixture at 50,000 μ g/mL in methylene chloride, 1mL/ampul.

Each	5-pk.	10-pk.
31465	31465-510	
w/data pack	31465-500	31565

Other Certified Fuel Standards

Save time—use these standards to perform calibration checks for TPH and aromatics in a single analysis.

Certified BTEX in Unleaded Gas Composite Standard

Certified for:

benzene
ethylbenzene
isopropyl benzene
methyl *tert*-butyl ether
naphthalene

toluene
m-xylene
o-xylene
p-xylene

5,500ppm gasoline in P&T methanol, certified components listed, 1mL/ampul

Product
Information
from Restek

To help laboratories comply with and use these analytical procedures, Restek has been active in following the state guidance. Based on our assembled knowledge of the methods, our experienced chemists have a list of the appropriate technical service tools and analytical products to achieve success with these methods. We offer quality chromatographic columns, analytical reference materials, and sample preparation products.

This comprehensive product listing contains all the information you will need to quickly set-up or reorder consumables for these methods. Please reference our latest product catalog or call 800-356-1688 or 814-353-1300, ext. 3, for more information. Also, we would be happy to provide a quote on any custom consumable you may need!

State of Texas UST Monitoring

- ✓ The latest TNRCC 1005/1006 UST methods used by Texas.
- ✓ Comprehensive product listing conveniently organized by method number.
- ✓ Easy method set-up and reorder of consumables, including:
 - Gas chromatography columns and accessories,
 - Analytical reference materials,
 - Sample preparation supplies,
 - Technical service.

Texas Natural Resource Conservation Commission (TNRCC) enforces the state and EPA rules in assessment, monitoring, and closure of Underground Storage Tanks (UST). In the early 1990s TNRCC published the TNRCC Method 1005, Revision 01 analytical method for UST applications. Then, in 1996 they modified the method and released Revision 02; then modified it again in 1998 and Revision 03 was finalized in June 2001.

TNRCC Method 1005, Revision 03 determines the total petroleum hydrocarbons (TPH) (C6-C35) in solid and aqueous matrices. The GC method is used to separate the TPH into two ranges (C6-C12, and C12-C28), and a third range (C28-C35) when applicable, based on the boiling points of the hydrocarbons. It is based on liquid/liquid or liquid/solid extraction and GC/FID analysis, and may be used in lieu of US EPA Method 418.1 for the analysis of TPHs. Compared with earlier versions, this final version now includes heavier hydrocarbons in the range of C28 to C35. Data produced using Revision 03 should be reported to C35, unless the environmental medium of concern or suspected source of TPH does not contain hydrocarbons greater than C28. Results from analyses using earlier versions of Method 1005 may not include data for C28 to C35.

TNRCC Method 1006, draft version, was published in May 2000 to guide the separation and quantitation of aliphatic and aromatic fractions in petroleum contaminated soil or water samples. This method uses silica gel fractionation to separate the aliphatic and aromatic fractions. The method is applicable to hydrocarbons in the gasoline, diesel, motor oil range, and commonly is used in conjunction with TNRCC Method 1005 for the determination of total petroleum hydrocarbons. TNRCC 1006 method is not intended for the quantitation of individual target analytes, such as benzene, toluene, naphthalene, or other aromatics. Those target analytes are best determined using EPA Methods 8021, 8260 or 8270.

EPA Methods

for Texas UST Applications

To complement the TNRCC 1005 and TNRCC 1006 methods, TNRCC has recommended standard EPA methods for Texas UST analysis of individual target compounds, such as benzene, toluene, naphthalene, and other aromatics. The recommended methods include EPA Methods 8021, 8260 or 8270. Please request the EPA UST Fast Facts (Lit. Cat. #59397) for complete product listings.

Fuel and Certified Fuel Standards

We offer a wide variety of composite fuel standards and single-source fuels to meet your needs. Please see our general chromatography product catalog for detailed listings of the following:

Product
Information
from Restek

To help laboratories comply with and use these analytical procedures, Restek has been active in following the state guidance. Based on our good knowledge of the methods, our experienced chemists have developed a list of the appropriate technical service tools and analytical products to achieve success with these methods. We offer quality chromatographic columns, analytical reference materials, and sample preparation products.

In this comprehensive product listing, you will find everything you need to quickly set up or reorder consumables for these methods. Please refer to our latest product catalog or call 800-356-1688 or 814-353-1300, ext. 3, for more information. Also, we will be happy to provide a quote on any custom consumable you may need!

State of Florida UST Monitoring

- ✓ Comprehensive products listing for the latest UST methods used by the State of Florida.
- ✓ Products conveniently organized by method number.
- ✓ Easy method set-up and reorder of consumables, including:
 - Gas chromatography columns and accessories,
 - Analytical reference materials,
 - Sample preparation supplies,
 - Technical service.

The Florida storage tank program is part of the Bureau of Petroleum Storage Systems in the Department of Environmental Protection (FDEP) Division of Waste Management. In 1983 Florida was one of the first states to pass legislation, adopt rules, and develop a program for the regulation of underground and aboveground storage tank systems. To comply with the US Environmental Protection Agency (EPA) UST rules, FDEP developed specific analytical requirements in the early 1990s for the assessment of petroleum contaminations from storage tank systems.

In November 1995, FDEP released the first Florida Petroleum Residual Organic (FL-PRO) method to regulate the procedure for analyzing petroleum hydrocarbons. The method is based on solvent extraction and GC/FID to measure the Total Recoverable Petroleum Hydrocarbons (TRPH) in water and soil in the alkane range of C8-C40. In April 1996 FDEP published the FL-PRO supplement in its Petroleum Cleanup Guidance Document #7.

FDEP also mandates that each sample be analyzed for volatile organic aromatics (VOAs), methyl-tert-butylether (MTBE), and polycyclic aromatic hydrocarbons (PAHs). FDEP references Massachusetts EPH and VPH Protocols and standard EPA Methods 8015, 8021, 8260, 8270 and 8310.

Gas Chromatography Columns & Accessories

For these items, see Restek's

Chromatography Products Catalog:

- Syringes
- Autosampler Vials
- Guard Columns
- Ferrules, Septa

Recommended Gas Chromatography Columns

Rtx®-5, 30m x 0.25mm

Film Thickness	temp. limits	Cat. #
0.25µm	-60 to 330/350°C	10223
0.50µm	-60 to 330/350°C	10238
1.00µm	-60 to 320/340°C	10253

Integra-Guard™ Columns

Guard and analytical column in one connectionless length.

*Add the appropriate suffix number to analytical column catalog number.

ID	Length	Suffix #*
0.25mm	5m	-124
	10m	-127

Syringes

Standard Micro-Liter Syringes for Agilent 7673 and 7683 Autosamplers

Size	Needle Gauge	6-pk.
10µL	23s	20169
10µL	23s-26s	24600

Autosampler Vials

Crimp Top Vial Snap Seal™ Style (12 x 32mm, 11mm Crimp)

Description*	1,000-pk.
2.0mL Clear Glass Vial w/White Graduated Marking Spot	24384
2.0mL Amber Glass Vial w/White Graduated Marking Spot	24386

*Marking spots are available on request in blue, green, rust or yellow.

Aluminum Crimp Seals w/Septa

Description	1,000-pk.
Silver Seal, PTFE/Natural Rubber Septa	21175
Silver Seal, PTFE/Silicone Septa*	24360

*PTFE/Silicone/PTFE available on request.

Thermolite® Septa

Size	temp. limits	25-pk.	50-pk.	100-pk.
11mm (7/16")	to 340°C	20363	20364	20365

Replacement Inlet Seals

Stainless Steel Inlet Seal for Single-Column Installation*

Size	2-pk.	10-pk.
0.8mm ID	21315	21316

*Equivalent to Agilent Part# 18740-20880.

Inlet Liners

For Agilent GCs

Description	ID /OD & Length (mm)	ea.	5-pk.
Uniliner®*	4.0 ID, 6.3 OD x 78.5	20335	20336
Drilled Uniliner®	4.0 ID, 6.3 OD x 78.5	21054	21055
1mm Split**	1.0 ID, 6.3 OD x 78.5	20972	20973

*Restek design improves performance over the original Agilent Liner.

**Use this liner for increased sensitivity.

Low Volume Injector for Agilent GCs

Description	kit.
Low-Volume Injector for Agilent Split/Splitless GC Inlets	21692

Analytical Reference Materials:

FL-PRO, Revision 1 (11-1-1995)

Recommended Surrogate

nonatriacontane (C39), 3000 µg/mL in carbon disulfide, working solution 300µg/mL in acetone.

Florida TRPH Surrogate Mix

n-nonacontane (C39)

3,000µg/mL in carbon disulfide, 1mL/ampul*

Each	5-pk.	10-pk.
31456	31456-510	
w/data pack	31456-500	31456-520

*Ground transportation shipments only.

o-Terphenyl Standard

10,000µg/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31097	31097-510	
w/data pack	31097-500	31097-520

2,000µg/mL in acetone, 1mL/ampul

Each	5-pk.	10-pk.
31066	31066-510	
w/data pack	31066-500	31066-520

Petroleum Hydrocarbon Standard

Florida TRPH Standard

n-octane (C8)	n-eicosane (C20)	n-dotriacontane (C32)
n-decane (C10)	n-docosane (C22)	n-tetratriacontane (C34)
n-dodecane (C12)	n-tetracosane (C24)	n-hexatriacontane (C36)
n-tetradecane (C14)	n-hexacosane (C26)	n-octatriacontane (C38)
n-hexadecane (C16)	n-octacosane (C28)	n-tetracontane (C40)
n-octadecane (C18)	n-triacontane (C30)	

500µg/mL each in hexane, 1mL/ampul

Each	5-pk.	10-pk.
31266	31266-510	
w/data pack	31266-500	31266-520

Retention Time Marker

n-hexane (C6)

n-decane (C10)

n-dodecane (C12)

1,000µg/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30483	30483-510	
w/data pack	30483-500	30483-520

Pattern Recognition Standards (Optional)

Used to identify petroleum product type.

Unleaded Gasoline Composite Standard

2,500µg/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30081	30081-510	
w/data pack	30081-500	30181

50,000µg/mL in P&T methanol, 5mL/ampul

Each	5-pk.	10-pk.
30205	30205-510	
w/data pack	30205-500	30305

50,000µg/mL in P&T methanol, 5mL/ampul

Each	5-pk.	10-pk.
30206	30206-510	
w/data pack	30206-500	30306

Diesel Fuel #2 Composite Standard

5,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31093	31093-510	
w/data pack	31093-500	31193

50,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31258	31258-510	
w/data pack	31258-500	31358

50,000 μ g/mL in methylene chloride, 5mL/ampul

Each	5-pk.	10-pk.
31259	31259-510	
w/data pack	31259-500	31359

Kerosene Fuel Composite Standard

5,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31094	31094-510	
w/data pack	31094-500	31194

50,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31256	31256-510	
w/data pack	31256-500	31356

50,000 μ g/mL in methylene chloride, 5mL/ampul

Each	5-pk.	10-pk.
31257	31257-510	
w/data pack	31257-500	31357

Motor Oil Composite Standard

This composite solution is prepared from an equal volume blend of the following types of motor oil: 5w30, 10w30, 10w40, and 20w50. After blending, a precisely weighed amount of the composite is added to a volumetric flask to produce a mixture of 50,000 μ g/mL in methylene chloride, 1mL/ampul. 50,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31464	31464-510	
w/data pack	31464-500	31564

Used Motor Oil Composite Standard

This composite solution is prepared from an equal volume blend from five different gasoline powered vehicles (belonging to Restek employees). After blending, a precisely weighed amount of the composite is added to a volumetric flask to produce a mixture at 50,000 μ g/mL in methylene chloride 1mL/ampul.

50,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31465	31465-510	
w/data pack	31465-500	31565

Extractable Petroleum Hydrocarbons:

MA EPH (Jan. 1998)

Internal/surrogate

p-Terphenyl Standard

10,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31095	31095-510	
w/data pack	31095-500	31195

o-Terphenyl Standard

See FL-PRO, Rev. 1(11-1-1995) for description

31097 31066

5- α -androstane

2,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31065	31065-510	
w/data pack	31065-500	31165

MA EPH Surrogate Spike Mix

1-chlorooctadecane o-terphenyl

4,000 μ g/mL each in acetone, 1mL/ampul

Each	5-pk.	10-pk.
31479	31479-510	
w/data pack	31479-500	31579

MA Fractionation Surrogate Spike Mix

2-bromonaphthalene 2-fluorobiphenyl

4,000 μ g/mL each in hexane, 1mL/ampul

Each	5-pk.	10-pk.
31480	31480-510	
w/data pack	31480-500	31580

Matrix Spike Mixtures

MA EPH Matrix Spike Mix

n-nonane (C9)	n-octacosane (C28)	naphthalene
n-tetradecane (C14)	acenaphthene	pyrene
n-nonadecane (C19)	anthracene	
n-eicosane (C20)	chrysene	
250 μ g/mL each in acetone, 1mL/ampul		

Each	5-pk.	10-pk.
31460	31460-510	
w/data pack	31460-500	31560

Calibration Mixtures

MA EPH Aromatic Hydrocarbon Standard

acenaphthene	benzo(k)fluoranthene	indeno(1,2,3-cd)pyrene
acenaphthylene	benzo(ghi)perylene	2-methylnaphthalene
anthracene	chrysene	naphthalene
benzo(a)anthracene	dibenz(a,h)anthracene	phenanthrene
benzo(a)pyrene	fluoranthene	pyrene
benzo(b)fluoranthene	fluorene	

1,000 μ g/mL each in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31458	31458-510	
w/data pack	31458-500	31558

MA EPH Aliphatic Hydrocarbon Standard

n-nonane (C9)	n-octacosane (C18)	n-hexacosane (C26)
n-decane (C10)	n-nonadecane (C19)	n-octacosane (C28)
n-dodecane (C12)	n-eicosane (C20)	n-triacontane (C30)
n-tetradecane (C14)	n-docosane (C22)	n-hexatriacontane (C36)
n-hexadecane (C16)	n-tetracosane (C24)	

1,000 μ g/mL each in hexane, 1mL/ampul

Each	5-pk.	10-pk.
31459	31459-510	
w/data pack	31459-500	31559

Fractionation Check Mixtures

MA Fractionation Check Mix

PAHs:	fluorene	<i>n</i> -hexadecane (C16)
acenaphthene	indeno(1,2,3-cd)pyrene	<i>n</i> -octadecane (C18)
acenaphthylene	2-methylnaphthalene	<i>n</i> -nonadecane (C19)
anthracene	naphthalene	<i>n</i> -eicosane (C20)
benzo(a)anthracene	phenanthrene	<i>n</i> -docosane (C22)
benzo(a)pyrene	pyrene	<i>n</i> -tetracosane (C24)
benzo(b)fluoranthene		<i>n</i> -hexacosane (C26)
benzo(k)fluoranthene		<i>n</i> -octacosane (C28)
benzo(ghi)perylene		<i>n</i> -triacontane (C30)
chrysene		<i>n</i> -hexatriacontane (C36)
dibenzo(a,h)anthracene		
fluoranthene		
25 μ g/mL each in hexane, 1mL/ampul		

Each	5-pk.	10-pk.

w/data pack	31481-500	31581

Aliphatic and Aromatic Fractions:

EPA Method 8021B and 8260B

Internal/surrogate

MA VPH Surrogate Standard

2,5-dibromotoluene
1,000 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30435	30435-510	
w/data pack	30435-500	30535

10,000 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30453	30453-510	
w/data pack	30453-500	30553

Matrix Spike Mixtures

MA VPH Matrix Spike Mix with Surrogate

n-pentane (C5) methyl *tert*-butyl ether
n-nonane (C9) naphthalene
benzene toluene
2,5-dibromotoluene (surrogate) 1,2,4-trimethylbenzene
ethylbenzene *m*-xylene
isooctane *o*-xylene
2-methylpentane *p*-xylene
2,500 μ g/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30454	30454-510	
w/data pack	30454-500	30554

Calibration Mixtures

California Oxygenates Mix

diisopropyl ether 2,000 μ g/mL *tert*-butyl alcohol 10,000
ethyl-*tert*-butyl ether 2,000 methyl *tert*-butyl ether 2,000
tert-amyl methyl ether 2,000
In P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30465	30465-510	
w/data pack	30465-500	30565

BTEX Standards

benzene toluene *o*-xylene
ethylbenzene *m*-xylene *p*-xylene
2,000 μ g/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30051	30051-510	
w/data pack	30051-500	30151

2,000 μ g/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30213	30213-510	
w/data pack	30213-500	30313

2,000 μ g/mL each in P&T methanol, 1,000 μ g/mL *m*-xylene & *p*-xylene, 1mL/ampul

Each	5-pk.	10-pk.
30488	30488-510	
w/data pack	30488-500	30588

MA Volatile Petroleum Hydrocarbon (VPH) Standard

n-pentane (C5) 1,000 μ g/mL naphthalene 1,000
n-nonane (C9) 1,000 toluene 1,500
benzene 500 1,2,4-trimethylbenzene 1,000
ethylbenzene 500 *m*-xylene 1,000
isooctane 1,500 *o*-xylene 1,000
2-methylpentane 1,500 *p*-xylene 1,000
methyl *tert*-butyl ether 1,500
In P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30434	30434-510	
w/data pack	30434-500	30534

Other Certified Fuel Standards

Perform calibration checks for TPH & aromatics in one analysis.

Certified BTEX in Unleaded Gas Composite Standard

Certified for:
benzene methyl *tert*-butyl ether *m*-xylene
ethylbenzene naphthalene *o*-xylene
isopropyl benzene toluene *p*-xylene
5,500ppm gasoline in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30237	30237-510	
w/data pack	30237-500	30337

Certified Aromatics in Gasoline

Certified for:
benzene isopropylbenzene 1,2,4-trimethylbenzene
ethylbenzene methyl *tert*-butyl ether 1,3,5-trimethylbenzene
m-ethyltoluene naphthalene *m*-xylene
o-ethyltoluene *n*-propylbenzene *o*-xylene
p-ethyltoluene toluene *p*-xylene
1,2,3-trimethylbenzene
5,500ppm gasoline in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30485	30485-510	
w/data pack	30485-500	30585

Certified PAHs in Diesel

Certified PAHs & Typical Certified Conc.* (ppm)

acenaphthene 20 2-methylnaphthalene 180
acenaphthylene 14 naphthalene 90
fluorene d6 32 phenanthrene 47
1-methylnaphthalene 269

50,000ppm diesel #2 in methylene chloride, PAH conc. listed above, 1mL/ampul

Each	5-pk.	10-pk.
31673	31673-510	
w/data pack	31673-500	31773

*Varies lot to lot. See Certificate of Analysis for certified concentrations.

At-a-Glance
Product
Information
from Restek

To help laboratories comply with and use these analytical procedures, Restek has been active in following the state guidelines. Based on our good knowledge of the methods, our experienced chemists have developed a list of the appropriate technical service tools and analytical products to achieve success with these methods. We offer quality chromatographic columns, analytical reference materials, and sample preparation products.

In this comprehensive product listing, you will find everything you need to quickly set up or reorder consumables for these methods. Please refer to our latest product catalog (lit. cat. #59662) or call 800-356-1688 or 814-353-1300, ext. 3, for more information. Also, we will be happy to provide a quote on any custom consumable you may need!

Northwest Regional UST Monitoring

- ✓ Comprehensive product listing for the latest UST methods used by the States of Oregon and Washington.
- ✓ Products conveniently organized by method number.
- ✓ Easy method set-up and reorder of consumables, including:
 - Gas chromatography columns and accessories,
 - Analytical reference materials,
 - Sample preparation supplies,
 - Technical service.

Washington State Department of Ecology (WSDE) has been using analytical methods for the analysis of total petroleum hydrocarbons (TPH) since 1991. These analytical methods, known as WTPH methods, have been extensively used in underground storage tank (UST) applications. In 1997 these methods were updated to provide additional detail, to provide for extended analysis and to incorporate an identification (ID) method for water samples. These updated methods are now called NWTPH ("NW" = "Northwest" to reflect their use in Oregon as well as Washington). Under NWTPH, there are three methods: NWTPH-HCID for hydrocarbon identification; NWTPH-Gx for volatile petroleum products; and NWTPH-Dx for semivolatile petroleum products.

In 1998 WSDE completed a "working draft" of the amendment to the state cleanup law: The Interim TPH Policy describes a new approach for petroleum: Separation into carbon-range fractions and use of surrogates or derived values to represent those fractions. Two analytical methods were adopted from Massachusetts' Department of Environmental Protection: VPH for volatile aliphatic and aromatic petroleum hydrocarbons, and EPH for extractable aliphatic and aromatic petroleum hydrocarbons.

NWTPH-HCID is a qualitative and semi-quantitative screen to determine the presence and type of petroleum products that may exist in water or soil. This method should be used if the type of petroleum contamination is unknown, and should be performed on contaminated soil or water that is representative of the site. The results will determine what fully quantitative method(s), if any, are needed for compliance with the matrix criteria. Should the value of the analysis for gasoline, diesel or heavy oils (or any other identified petroleum product) exceed the reporting limits, the specific analytical method for that product must be employed.

NWTPH-Gx is the qualitative and quantitative extended method for volatile (e.g., gasoline) petroleum products in soil and water. Petroleum products applicable for this method include aviation and automotive gasoline, mineral spirits, Stoddard solvent, and naphtha.

NWTPH-Dx is the qualitative and quantitative extended method for semivolatile (e.g., diesel) petroleum products in soil and water. Petroleum products applicable for this include jet fuels, kerosene, diesel oils, hydraulic fluids, mineral oils, lubricating oils and fuel oils.

Northwest Regional Gas Chromatography Columns & Accessories

For these items, see Restek's
Chromatography Products Catalog:

- Syringes
- Autosampler Vials
- Guard Columns
- Ferrules, Septa

Recommended Gas Chromatography Columns

Rtx®-5, 30m x 0.25mm

Film Thickness	temp. limits	Cat. #
0.25µm	-60 to 330/350°C	10223
0.50µm	-60 to 330/350°C	10238
1.00µm	-60 to 320/340°C	10253

Integra-Guard™ Columns

Guard and analytical column in one connectionless length.

*Add the appropriate suffix number to analytical column catalog number.

ID	Length	Suffix #*
0.25mm	5m	-124
	10m	-127

Syringes

Standard Micro-Liter Syringes for Agilent 7673 and 7683 Autosamplers

Size	Needle Gauge	6-pk.
10µL	23s	20169
10µL	23s-26s	24600

Autosampler Vials

Crimp Top Vial Snap Seal™ Style (12 x 32mm, 11mm Crimp)

Description*	1,000-pk.
2.0mL Clear Glass Vial w/White Graduated Marking Spot	24384
2.0mL Amber Glass Vial w/White Graduated Marking Spot	24386

*Marking spots are available on request in blue, green, rust or yellow.

Aluminum Crimp Seals w/Septa

Description	1,000-pk.
Silver Seal, PTFE/Natural Rubber Septa	21175
Silver Seal, PTFE/Silicone Septa*	24360

*PTFE/Silicone/PTFE available on request.

Thermolite® Septa

Size	temp. limits	25-pk.	50-pk.	100-pk.
11mm (7/16")	to 340°C	20363	20364	20365

Replacement Inlet Seals

Stainless Steel Inlet Seal for Single-Column Installation*

Size	2-pk.	10-pk.
0.8mm ID	21315	21316

*Equivalent to Agilent Part# 18740-20880.

Inlet Liners

For Agilent GCs

Description	ID /OD & Length (mm)	ea.	5-pk.
Uniliner®*	4.0 ID, 6.3 OD x 78.5	20335	20336
Drilled Uniliner®	4.0 ID, 6.3 OD x 78.5	21054	21055
1mm Split**	1.0 ID, 6.3 OD x 78.5	20972	20973

*Restek design improves performance over the original Agilent Liner.

**Use this liner for increased sensitivity.

Low Volume Injector for Agilent GCs

Description	kit.
Low-Volume Injector for Agilent Split/Splitless GC Inlets	21692

Analytical Reference Materials: WA VPH (June 1997)

The method is designed to measure the collective concentrations of volatile aliphatic and aromatic petroleum hydrocarbons in water and soil. The method is based on a purge and trap, gas chromatography procedure with PID/FID in series for detection.

Calibration Mixtures

WA VPH Standard

n-pentane (C5)	benzene	toluene
n-hexane (C6)	ethylbenzene	1,2,3-trimethylbenzene
n-octane (C8)	1-methylnaphthalene	m-xylene
n-decane (C10)	methyl tert-butyl ether	o-xylene
n-dodecane (C12)	naphthalene	p-xylene

1,000µg/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30451	30451-510	
w/data pack	30451-500	30551

Surrogate Mixtures

MA VPH Surrogate Standard

2,5-dibromotoluene

1,000µg/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30435	30435-510	
w/data pack	30435-500	30535

10,000µg/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30453	30453-510	
w/data pack	30453-500	30533

Matrix Spike Mixtures

PVOC Mix (California)

benzene	toluene	p-xylene
ethylbenzene	m-xylene	
methyl tert-butyl ether	o-xylene	

1,000µg/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30231	30231-510	
w/data pack	30231-500	30331

Petroleum Reference Mixtures Pattern Recognition Mixtures

Unleaded Gasoline Composite Standard

2,500µg/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30081	30081-510	
w/data pack	30081-500	30181

50,000µg/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30205	30205-510	
w/data pack	30205-500	30305

50,000µg/mL in P&T methanol, 5mL/ampul

Each	5-pk.	10-pk.
30206	30206-510	
w/data pack	30206-500	30306

Analytical Reference Materials: WA EPH (June 1997)

The method is designed to measure concentrations of diesel range organics (DRO) in the C10-C28 range in water, soil, or waste. It also can be used to measure kerosene, motor oil, or lubricant oil. It is based on a solvent extraction, GC/FID procedure.

Calibration Mixtures

WA EPH Aromatic Hydrocarbon Mix

acenaphthene	naphthalene	toluene
benzo(ghi)perylene	pyrene	1,2,3-trimethylbenzene
1,000µg/mL each in methylene chloride, 1mL/ampul		
Each	5-pk.	10-pk.
31488	31488-510	
w/data pack	31488-500	31588

WA EPH Aliphatic Hydrocarbon Mix

n-octane (C8)	n-dodecane (C12)	n-heneicosane (C21)
n-decane (C10)	n-hexadecane (C16)	n-tetracontane (C34)
1,000µg/mL each in hexane, 1mL/ampul		
Each	5-pk.	10-pk.
31489	31489-510	
w/data pack	31489-500	31589

Surrogate Mixtures

MA EPH Surrogate Spike Mix

1-chlorooctadecane	o-terphenyl	
4,000µg/mL each in acetone, 1mL/ampul		
Each	5-pk.	10-pk.
31479	31479-510	
w/data pack	31479-500	31579

Internal Standard Mixtures

5- α -androstane

2,000µg/mL in methylene chloride, 1mL/ampul		
Each	5-pk.	10-pk.
31065	31065-510	
w/data pack	31065-500	31165

Matrix Spike Mixtures

WA EPH Matrix Spike Mix

n-decane (C10)	n-heneicosane (C21)	benzo(a)pyrene	pyrene
n-dodecane (C12)	acenaphthene	benzo(ghi)perylene	
n-hexadecane (C16)	anthracene	naphthalene	
250µg/mL each in acetone, 1mL/ampul			
Each	5-pk.	10-pk.	
31490	31490-510		
w/data pack	31490-500	31590	

Fractionation Mixtures

WA EPH Fractionation Check Mix

n-octane (C8)	anthracene	fluoranthene
n-decane (C10)	benzo(a)anthracene	fluorene
n-dodecane (C12)	benzo(a)pyrene	indeno(1,2,3-cd)pyrene
n-hexadecane (C16)	benzo(b)fluoranthene	naphthalene
n-heneicosane (C21)	benzo(k)fluoranthene	phenanthrene
n-tetracontane (C34)	benzo(ghi)perylene	pyrene
	acenaphthene	
	acenaphthylene	dibenzo(a,h)anthracene

25µg/mL each in hexane, 1mL/ampul

Each	5-pk.	10-pk.
31491	31491-510	
w/data pack	31491-500	31491-520

Analytical Reference Materials:

NWTPH-HCID (June 1997)

The method is designed to identify petroleum products in the C7-C30 range, by “fingerprint” pattern matching, in water, soil or waste. The extraction can be used to quantitatively measure DRO range petroleum products, kerosene, motor oil, or lubricant oil. It is based on a solvent extraction GC/FID procedure.

Surrogate Mixtures

NW TPH-HCID Surrogate Mix

n-pentacosane (C25)	4-bromofluorobenzene	
5,000µg/mL each in methylene chloride, 1mL/ampul		
Each	5-pk.	10-pk.
31486	31486-510	
w/data pack	31486-500	31486-520

Retention Time Mixtures

NW TPH-HCID Retention Time Mix

n-dodecane (C12)	n-tetracosane (C24)	toluene
2,500µg/mL each in methylene chloride, 1mL/ampul		
Each	5-pk.	10-pk.
31485	31485-510	
w/data pack	31485-500	31485-520

Petroleum Reference Mixtures

Pattern Recognition Mixtures

Mineral Spirits Standard

50,000µg/mL in methylene chloride, 1mL/ampul

Each	5-pk.
31260	31260-510
w/data pack	31260-500

50,000µg/mL in methylene chloride, 5mL/ampul

Each	5-pk.	10-pk.
31261	31261-510	
w/data pack	31261-500	31361

Unleaded Gasoline Composite Standard

2,500 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30081	30081-510	
w/data pack	30081-500	30181

50,000 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30205	30205-510	
w/data pack	30205-500	30305

50,000 μ g/mL in P&T methanol, 5mL/ampul

Each	5-pk.	10-pk.
30206	30206-510	
w/data pack	30206-500	30306

Kerosene Fuel Composite Standard

5,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31094	31094-510	
w/data pack	31094-500	31194

50,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31256	31256-510	
w/data pack	31256-500	31356

50,000 μ g/mL in methylene chloride, 5mL/ampul

Each	5-pk.	10-pk.
31257	31257-510	
w/data pack	31257-500	31357

Diesel Fuel #2 Composite Standard

5,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31093	31093-510	
w/data pack	31093-500	31193

50,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31258	31258-510	
w/data pack	31258-500	31358

50,000 μ g/mL in methylene chloride, 5mL/ampul

Each	5-pk.	10-pk.
31259	31259-510	
w/data pack	31259-500	31359

Motor Oil Composite Standard

Prepared from an equal volume blend of these motor oils: 5W30, 10W30, 10W40, 20W50. A precisely weighed amount of the composite is diluted to 50,000 μ g/mL in methylene chloride. 1mL/ampul.

Each	5-pk.	10-pk.
31464	31464-510	
w/data pack	31464-500	31564

Used Motor Oil Composite Standard

Prepared from an equal volume blend from five gasoline powered vehicles. A precisely weighed amount of the composite is diluted to 50,000 μ g/mL in methylene chloride. 1mL/ampul.

Each	5-pk.	10-pk.
31465	31465-510	
w/data pack	31465-500	31565

Analytical Reference Materials:

NWTPH-Gx (June 1997)

This method is designed to measure concentrations of volatile petroleum products. BTEX may be determined simultaneously with gasoline, if requirements of methods 8020/8021 (use of PID) or 8260 (use of MS) are met.

NW TPH-Gx Surrogate Mix

4-bromofluorobenzene 1,4-difluorobenzene

2,500 μ g/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30455	30455-510	
w/data pack	30455-500	30555

Petroleum Reference Mixtures Pattern Recognition Mixtures

Unleaded Gasoline Composite Standard

2,500 μ g/mL and 50,000 μ g/mL mixtures; described in column at left.

Analytical Reference Materials:

NWTPH-Dx (June 1997)

The method is designed to measure concentrations of diesel range organics (DRO) in the C10-C28 range in water, soil, or waste.

It also can be used to measure kerosene, motor oil, or lubricant oil. It is based on a solvent extraction, GC/FID procedure.

NW TPH-Dx Surrogate Mixes

Pentacosane Standard

10,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31487	31487-510	
w/data pack	31487-500	31587

p-terphenyl

10,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31095	31095-510	
w/data pack	31095-500	31195

2-fluorobiphenyl

10,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31096	31096-510	
w/data pack	31096-500	31196

o-terphenyl

10,000 μ g/mL in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.
31097	31097-510	
w/data pack	31097-500	31197

Petroleum Reference Mixtures Pattern Recognition Mixtures

Diesel Fuel #2 Composite Standard

5,000 μ g/mL and 50,000 μ g/mL mixtures; described in column at left.

Kerosene Fuel Composite Standard

5,000 μ g/mL and 50,000 μ g/mL mixtures; described in column at left.

To help laboratories comply with and use these analytical procedures, Restek has been active in following federal guidance. Based on our good knowledge of the methods, our experienced chemists have developed a list of the appropriate technical service tools and analytical products to achieve success with these methods. We offer quality chromatographic columns, analytical reference materials, and sample preparation products.

In this comprehensive product listing, you will find everything you need to quickly setup or reorder consumables for these methods. Please refer to our latest product catalog or call 800-356-1688 or 814-353-1300, ext. 3, for more information. Also, we will be happy to provide a quote on any custom consumable you may need!

EPA Office Of Underground Storage Tanks (OUST) Recommended Methods

- ✓ Comprehensive products listing for the latest EPA methods for UST applications.
- ✓ Products conveniently organized by method number.
- ✓ Easy method set-up and reorder of consumables, including:
 - Chromatography columns and accessories
 - Analytical reference materials
 - Sample preparation supplies

In the late 1980s the US Environmental Protection Agency (EPA) established the Office of Underground Storage Tanks (OUST) to enforce federal laws on environmental petroleum contamination. Underground storage tank (UST) systems installed before December 22, 1988 had no protection against spills and overfills, or were likely to corrode and leak. OUST mandated that all UST systems must not be contaminating nearby groundwater and soil by December 22, 1998. Existing UST systems must be either protected from spills, overfills, and corrosion or replaced with new systems that have spill, overfill, and corrosion protection.

The 1998 deadline has passed and many of the unprotected USTs have been properly treated. However, the need for monitoring USTs persists. OUST has been actively enforcing the federal UST regulations.

OUST has recommended specific EPA methods for UST applications (Table 1). Although many states have developed state-specific methods for UST analysis over the years, a majority of the states still use these EPA methods.

Table 1. OUST-recommended EPA Methods for UST applications.

EPA Method	Chemical of Concern	Technique
EPA 8015B	Aliphatic and aromatic hydrocarbons GRO (C6-C10) and DRO (C10-C28)	GRO: purge and trap GC/FID; DRO: solvent extraction GC/FID
EPA 8021B	Aromatic VOCs	Purge and trap GC/PID/HECD
EPA 8310	PAHs	Solvent extraction HPLC/UV
EPA 8100	PAHs	Solvent extraction GC/FID
EPA 8260B	VOCs	Purge and trap GC/MS
EPA 8270C [†]	SVOCs	Solvent extraction GC/MS
EPA 418.1/413.1 [†]	TRPH in sediment, soil and sludge	IR
EPA 1664 [†]	TPH	Solvent extraction IR

At-a-Glance
Product
Information
from Restek

To help laboratories comply with and use these analytical procedures, Restek has been active in following the state guidance. Based on our good knowledge of the methods, our experienced chemists have developed a list of the appropriate technical service tools and analytical products to achieve success with these methods. We offer quality chromatographic columns, analytical reference materials, and sample preparation products. In this comprehensive product listing, you will find everything you need to quickly set up or reorder consumables for these methods. Please refer to our latest product catalog, or call 800-356-1688 or 814-353-1300, ext. 3, for more information. Also, we will be happy to provide a quote on any custom consumable you may need!

Underground Storage Tank Monitoring State Of California

- ✓ Comprehensive products listing for the latest UST methods used by the State of California.
- ✓ Conveniently organized by method number.
- ✓ Easy method set-up and reorder of consumables, including:
Gas chromatography columns and accessories,
Analytical reference materials,
Sample preparation supplies,
Technical service.

In 1985, the California Department of Health Services and the State Water Resource Control Board (SWRCB) formed the Leaking Underground Fuel Tank (LUFT) task force to establish procedures for determining if an underground storage fuel tank site is clean and safe. In 1989 the task force published a LUFT field manual setting up guidelines for site assessment, cleanup, and underground storage tank closure. Within the field manual, the task force mandated a DHS analytical method for petroleum storage tank applications, known as LUFT method.

In 1993, SWRCB released the Underground Storage Tank (UST) Closure Guideline to comply with the US Environmental Protection Agency (EPA) UST 1998 deadline. SWRCB approved standard EPA methods for California UST analysis are listed in Table I. EPA 8015B is for gasoline and gasoline range organics (GRO) by GC/FID/purge and trap, with optional BTEX by PID; this is known as the California GRO method. EPA 8015B is for diesel range organics (DRO) and motor oil range organics (MORO) by GC/FID; this is known as the California DRO method.

While SWRCB is the head agency for California's UST program, and regulates the analytical procedures, each of the eight regional UST offices requires specific analyses of its target list of petroleum contaminants. The California UST program is diversified, in terms of contaminant lists that must be analyzed in different regions, but is unified under the guidelines of SWRCB. For example, Los Angeles region requires TPHG (gasoline range), BTEX, and MTBE. The central valley region, however, requires TPH and a list of oxygenates, methanol, ethanol, tertiary butyl alcohol (TBA), methyl *tert*-butyl ether (MTBE), diisopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE) and tertiary amyl methyl ether (TAME).

Table I. California Guide for the Analysis of Petroleum Hydrocarbon Residues

	Soil, solids, sludge	Water
Gasoline	8015B	8015B
BTEX	8021B (with PID in series)	8021B 8260B (with PID in series)
MTBE & Oxygenates	8021B	8021B, 8260B
Diesel	8015B	8015B
PAHs	8270D	8270D
Kerosene	8015B	8015B
Motor oil	8015B	8015B

Gas Chromatography Columns & Accessories

For these items, see Restek's Chromatography Products Catalog:

- Syringes
- Autosampler Vials
- Guard Columns
- Ferrules, Septa

Recommended Gas Chromatography Columns

Rtx®-5, 30m x 0.25mm

Film Thickness	temp. limits	Cat. #
0.25µm	-60 to 330/350°C	10223
0.50µm	-60 to 330/350°C	10238
1.00µm	-60 to 320/340°C	10253

Integra-Guard™ Columns

Guard and analytical column in one connectionless length.

*Add the appropriate suffix number to analytical column catalog number.

ID	Length	Suffix#*
0.25mm	5m	-124
	10m	-127

Syringes

Standard Micro-Liter Syringes for Agilent 7673 and 7683 Autosamplers

Size	Needle Gauge	6-pk.
10µL	23s	20169
10µL	23s-26s	24600

Autosampler Vials

Crimp Top Vial Snap Seal™ Style (12 x 32mm, 11mm Crimp)

Description*	1,000-pk.
2.0mL Clear Glass Vial w/White Graduated Marking Spot	24384
2.0mL Amber Glass Vial w/White Graduated Marking Spot	24386

*Marking spots are available on request in blue, green, rust or yellow.

Aluminum Crimp Seals w/Septa

Description	1,000-pk.
Silver Seal, PTFE/Natural Rubber Septa	21175
Silver Seal, PTFE/Silicone Septa*	24360

*PTFE/Silicone/PTFE available on request.

Thermolite® Septa

Size	temp. limits	25-pk.	50-pk.	100-pk.
11mm (7/16")	to 340°C	20363	20364	20365

Replacement Inlet Seals

Stainless Steel Inlet Seal for Single-Column Installation*

Size	2-pk.	10-pk.
0.8mm ID	21315	21316

*Equivalent to Agilent Part# 18740-20880.

Inlet Liners

For Agilent GCs

Description	ID /OD & Length (mm)	ea.	5-pk.
Uniliner®*	4.0 ID, 6.3 OD x 78.5	20335	20336
Drilled Uniliner®	4.0 ID, 6.3 OD x 78.5	21054	21055
1mm Split**	1.0 ID, 6.3 OD x 78.5	20972	20973

*Restek design improves performance over the original Agilent liner.

**Use this liner for increased sensitivity.

Low Volume Injector for Agilent GCs

Description	kit.
Low-Volume Injector for Agilent Split/Splitless GC Inlets	21692

Analytical Reference Materials

EPA 8015B, 8021B, and 8260B

To determine gasoline and GRO in water, wastewater, soil and solid waste based on solvent extraction, purge and trap, GC/FID with optional PID in series for BTEX and GC/MS.

California Gasoline Range Organics (GRO)

8015B

Retention Time Marker

n-hexane (C6)	n-decane (C10)	n-dodecane (C12)
1,000µg/mL each in P&T methanol, 1mL/ampul		
Each	5-pk.	10-pk.

w/data pack		
30206-500	30206-520	30306

Certified BTEX in Unleaded Gas Composite Standard

Certified for:

benzene*	methyl tert-butyl ether*	m-xylene*
ethylbenzene*	naphthalene*	o-xylene*
isopropyl benzene*	toluene*	p-xylene*

5,500ppm gasoline in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30237	30237-510	—
w/data pack		
30237-500	30237-520	30337

*Concentration varies lot to lot. See Certificate of Analysis for certified concentrations. See <http://www.restekcorp.com> for current Certificate of Analysis.

Certified Aromatics in Gasoline (16 components)

Certified for:

benzene*	methyl tert-butyl ether*	1,3,5-trimethylbenzene*
ethylbenzene*	naphthalene*	m-xylene*
m-ethyltoluene*	n-propylbenzene*	o-xylene*
o-ethyltoluene*	toluene*	p-xylene*
p-ethyltoluene*	1,2,3-trimethylbenzene*	
isopropylbenzene*	1,2,4-trimethylbenzene*	

5,500ppm gasoline in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30485	30485-510	—
w/data pack		
30485-500	30485-520	30585

*Concentration varies lot to lot. See Certificate of Analysis for certified concentrations. See <http://www.restekcorp.com> for current Certificate of Analysis.

8021B

BTEX Standard

benzene	toluene	<i>o</i> -xylene
ethylbenzene	<i>m</i> -xylene	<i>p</i> -xylene

200 μ g/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30051	30051-510	—
	w/data pack	
30051-500	30051-520	30151

PVOC Mix (California) (7 components)

benzene	toluene	<i>p</i> -xylene
ethylbenzene	<i>m</i> -xylene	
methyl <i>tert</i> -butyl ether	<i>o</i> -xylene	

1,000 μ g/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30231	30231-510	—
	w/data pack	
30231-500	30231-520	30331

CA WIP VOA Standard (11 components)

benzene	1,4-dichlorobenzene	<i>m</i> -xylene
chlorobenzene	ethylbenzene	<i>o</i> -xylene
1,2-dichlorobenzene	methyl <i>tert</i> -butyl ether	<i>p</i> -xylene
1,3-dichlorobenzene	toluene	

2,000 μ g/mL each in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30236	30236-510	—
	w/data pack	
30236-500	30236-520	30336

Surrogate and Internal Standards

1-Chloro-4-fluorobenzene Mix

2,500 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30066	30066-510	—
	w/data pack	
30066-500	30066-520	30166

α,α,α -Trifluorotoluene Mix

2,500 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30068	30068-510	—
	w/data pack	
30068-500	30068-520	30168

10,000 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30083	30083-510	—
	w/data pack	
30083-500	30083-520	30183

1-Chlorooctane Mix

10,000 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30084	30084-510	—
	w/data pack	
30084-500	30084-520	30184

4-Bromofluorobenzene Mix

2,500 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30067	30067-510	—
	w/data pack	
30067-500	30067-520	30167
	w/data pack	
10,000 μ g/mL in P&T methanol, 1mL/ampul		
Each	5-pk.	10-pk.

8260B (VOA)

California Oxygenates Mix

diisopropyl ether	2,000 μ g/mL
ethyl- <i>tert</i> -butyl ether	2,000
<i>tert</i> -amyl methyl ether	2,000
<i>tert</i> -butyl alcohol	10,000
methyl <i>tert</i> -butyl ether	2,000

In P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30465	30465-510	—
	w/data pack	
30465-500	30465-520	30565

8260B MegaMix™ Calibration Mix (76 + 1 components)

Note: This product is provided as a two ampul set:

Ampule 1

acetonitrile	<i>cis</i> -1,4-dichloro-2-butene	naphthalene
acrylonitrile	<i>trans</i> -1,4-dichloro-2-butene	nitrobenzene
allyl chloride	1,1-dichloroethane	2-nitropropane
benzene	1,2-dichloroethane	pentachloroethane
bromobenzene	1,1-dichloroethene	propionitrile
bromochloromethane	<i>cis</i> -1,2-dichloroethene	<i>n</i> -propylbenzene
bromodichloromethane	<i>trans</i> -1,2-dichloroethene	styrene
bromoform	1,2-dichloropropane	1,1,1,2-tetrachloroethane
<i>n</i> -butylbenzene	1,3-dichloropropane	1,1,2,2-tetrachloroethane
<i>sec</i> -butylbenzene	2,2-dichloropropane	tetrachloroethene
<i>tert</i> -butylbenzene	1,1-dichloropropene	tetrahydrofuran
carbon disulfide	<i>cis</i> -1,3-dichloropropene	toluene
carbon tetrachloride	<i>trans</i> -1,3-dichloropropene	1,2,3-trichlorobenzene
chlorobenzene	diethyl ether	1,2,4-trichlorobenzene
2-chloroethanol	1,4-dioxane	1,1,1-trichloroethane
chloroform	ethylbenzene	1,1,2-trichloroethane
chloroprene	ethyl methacrylate	trichloroethene
2-chlorotoluene	hexachlorobutadiene	1,2,3-trichloropropane
4-chlorotoluene	iodomethane	1,1,2-trichlorotrifluoroethane (Freon® 113)
dibromochloromethane	isobutyl alcohol	1,2,4-trimethylbenzene
1,2-dibromo-3-chloropropane	isopropylbenzene	1,3,5-trimethylbenzene
1,2-dibromoethane	<i>p</i> -isopropyltoluene	<i>m</i> -xylene
dibromomethane	methacrylonitrile	<i>o</i> -xylene
1,2-dichlorobenzene	methyl acrylate	<i>p</i> -xylene
1,3-dichlorobenzene	methyl methacrylate	
1,4-dichlorobenzene	methylene chloride	

2,000 μ g/mL each in P&T methanol, 1mL/ampul

Ampule 2

2-chloroethyl vinyl ether

2,000 μ g/mL in P&T methanol, 1mL/ampul

Each	5-pk.	10-pk.
30475	30475-510	—
	w/data pack	
30475-500	30475-520	30575

8270 MegaMix™

(76 components)

acenaphthene	dibenzofuran	1-methylnaphthalene
acenaphthylene	1,2-dichlorobenzene	2-methylnaphthalene
aniline	1,3-dichlorobenzene	2-methylphenol
anthracene	1,4-dichlorobenzene	3-methylphenol*
azobenzene ¹	2,4-dichlorophenol	4-methylphenol*
benzo(a)anthracene	diethyl phthalate	naphthalene
benzo(a)pyrene	dimethyl phthalate	2-nitroaniline
benzo(b)fluoranthene	2,4-dimethylphenol	3-nitroaniline
benzo(ghi)perylene	1,2-dinitrobenzene	4-nitroaniline
benzo(k)fluoranthene	1,3-dinitrobenzene	nitrobenzene
benzyl alcohol	1,4-dinitrobenzene	2-nitrophenol
benzyl butyl phthalate	4,6-dinitro-2-methylphenol	4-nitrophenol
bis 2-ethylhexyl adipate	2,4-dinitrophenol	N-nitrosodimethylamine
bis(2-chloroethoxy)methane	2,4-dinitrotoluene	N-nitroso-di-n-propylamine
bis(2-chloroethyl)ether	2,6-dinitrotoluene	pentachlorophenol
bis(2-chloroisopropyl)ether	di-n-butyl phthalate	phenanthrene
bis(2-ethylhexyl)phthalate	di-n-octyl phthalate	phenol
4-bromophenyl phenyl ether	diphenylamine ²	pyrene
carbazole	fluorene	pyridine
4-chloroaniline	fluoranthene	2,3,4,6-tetrachlorophenol
4-chloro-3-methylphenol	hexachlorobenzene	2,3,5,6-tetrachlorophenol
2-chloronaphthalene	hexachlorobutadiene	1,2,4-trichlorobenzene
2-chlorophenol	hexachlorocyclopentadiene	2,4,5-trichlorophenol
4-chlorophenyl phenyl ether	hexachloroethane	2,4,6-trichlorophenol
chrysene	indeno(1,2,3-cd)pyrene	
dibenzo(a,h)anthracene	isophorone	

1,000µg/mL each (except where noted) in methylene chloride:benzene (75:25), 1mL/ampul

Each	5-pk.	10-pk.
31686	31686-510	—
	w/data pack	
31686-500	31686-520	31786

*3-methylphenol and 4-methylphenol concentration is 500µg/mL each.

¹1,2-diphenylhydrazine (8270-listed analyte) decomposes to azobenzene (mix component).

²N-nitrosodiphenylamine (8270-listed analyte) decomposes to diphenylamine (mix component).

8270 Calibration Mix #5 (19 components)

acenaphthene	benzo(k)fluoranthene	1-methylnaphthalene
acenaphthylene	chrysene	2-methylnaphthalene
anthracene	dibenzo(a,h)anthracene	naphthalene
benzo(a)anthracene	fluoranthene	phenanthrene
benzo(a)pyrene	fluorene	pyrene
benzo(b)fluoranthene	indeno(1,2,3-cd)pyrene	
benzo(ghi)perylene	3-methylcholanthrene	

2,000µg/mL each in methylene chloride, 1mL/ampul

Each	5-pk.	10-pk.

Vespel® Ring Inlet Seals

Leak-tight inlet seals for Agilent GCs!

Figure 1.

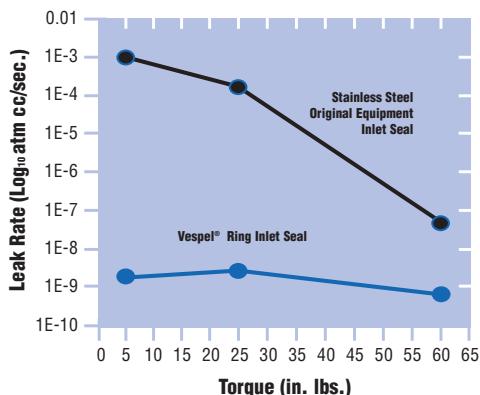

The soft ring in a Vespel® Ring Inlet Seal will not harm the critical seal or contaminate your sample, and you'll get a leak-tight seal every time!

the **Vespel**® advantage

Figure 2.

A Vespel® Ring Inlet Seal achieves leak-tight seals even at low torque, reducing the chance of leaks.

www.restekcorp.com

Features & Benefits

Feature	Benefit
Exclusive Vespel® ring seals first time, every time.	Leak-tight connections: no oxygen leaks into your carrier gas.
Lower leak rate than OEM metal seals.	Greater sensitivity (less detector noise) and longer column life (no phase oxidation).
Low torque, soft seal, patent pending design.	Reduces wear, prevents damage at critical seal: no unexpected downtime.

In Agilent split/splitless injection ports, it can be difficult to make and maintain a good seal with a conventional metal inlet disk. The metal-to-metal seal dictates that the analyst apply considerable torque to the reducing nut, and, based on our testing, this does not ensure a leak-tight seal. Over the course of oven temperature cycling, metal seals are prone to leaks, which ultimately can degrade the capillary column, and cause other analytical difficulties.

Restek designed the Vespel® Ring Inlet Seal to greatly improve injection port performance. The Vespel® Ring Inlet Seal is made from high-quality stainless steel and features a Vespel® ring embedded into its face (Figure 1). This soft Vespel® ring will not harm the critical seal on the bottom of the injector body, and is outside the sample flow path, for worry-free chromatography.

The Vespel® Ring Inlet Seal is designed to seal even after repeated temperature cycles and without retightening the reducing nut! To determine the variances between traditional seals and the Vespel® Ring Inlet Seal, we compared the leak rate for each type of seal at increasing torque (Figure 2), using a high sensitivity leak detector. Notice how well the Vespel® Ring Inlet Seal performs at all levels; it seals equally effectively at torques of 5lb. or 60lb. (Figure 2). Why trust a metal-to-metal seal when you can get leak-tight seals quickly, easily, and more reliably with a Restek Vespel® Ring Inlet Seal?

Vespel® Ring Inlet Seals are available in stainless steel, gold-plated, or with a Silcosteel® coating. Use the stainless steel seals for analyses of unreactive compounds. To reduce breakdown and adsorption of active compounds, use gold-plated or Silcosteel®-treated seals. The gold surface offers better inertness than standard stainless steel; Silcosteel® treatment provides inertness similar to that of fused silica capillary columns.

Contact Information

Alaska Department of Environmental Conservation

410 Willoughby Avenue
Juneau, AK 99801-1795
Phone: (907) 465-5203
Fax: (907) 465 5218
www.state.ak.us/dec/deh/laboratories/UST.htm

1. AK101, AK102, AK103 revised April 8, 2002.
2. Aromatic/aliphatic methods are under review by the state at the time of publication (July, 2003).

State of Alaska UST Monitoring

Alaska Department of Environmental Conservation (ADEC) has established guidelines defining gasoline range organics (GRO), diesel range organics (DRO), and residual range organics (RRO) from gross organic measurements by gas chromatography. ADEC regulations indicate which aromatic and aliphatic products and indicator compounds are to be tested for each petroleum range. The analyst must use Alaska Series Methods AK 101, AK 102, AK103¹, AK101AA, AK102AA, and AK103AA² and, for the various indicator compounds, methods from US EPA *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846*. The Alaska UST procedural manual indicates which products are to be tested for each petroleum range (see http://www.state.ak.us/dec/dspar/csites/guidance_cs.htm).

AK101 is used to measure concentrations of gasoline range organics (GRO) in water and soil. GROs correspond to an alkane range from n-hexane (C6) to the beginning of integration of the n-decane (C10) peak, and a boiling point range of 60°C to 170°C. The analytical method is GC/FID/PID, as specified in EPA Method 602 (water) or 8021B (solids). AK101AA is used for extracting, fractionating, and quantifying aromatic and aliphatic compounds in the gasoline range. The method is GC/FID/PID, as specified in EPA SW-846 methods 8015 and 8020B. Compounds are to be quantified as total area, as in Method AK101. BTEX indicator compounds are measured by GC/PID, because aromatic hydrocarbons must be individually identified and quantified. The method quantifies C6, C7, C8, and C9 alkyl benzenes as aromatics.

AK 102 is used to measure concentrations of diesel range organics (DRO) in water and soil. DROs correspond to an alkane range from n-decane (C10) to the beginning of integration of the n-pentacosane (C25) peak, and a boiling point range of 170°C to 400°C. This range includes kerosene, several types of jet fuel, several types of diesel fuel, and several light heating oils. The analytical method is GC/FID, as specified in EPA Method 8000 in SW-8461, American Petroleum Institute (API) consensus method Method for the Determination of Diesel Range Organics revision 2, 2/5/95, and Iowa Method OA-2.4. Quantification is based on direct comparison of resolved and unresolved peaks from C10 to the beginning of C25 against a C10-C25 calibration standard. PAH indicator compounds are assayed and quantified by Method 8100 in SW-846.

AK 103 is used to measure concentrations of residual range organics (RRO) in soil. RROs correspond to an alkane range from n-pentacosane (C25) to the beginning of integration of the n-hexatriacontane (C36) peak, and a boiling point range of 400°C to 500°C. This range includes asphalt, mid-range boiling point products such as diesel fuels, and Bunker C. The analytical method is GC/FID as specified in methods 8000 and 8100 in SW-846, American Petroleum Institute (API) consensus method Method for the Determination of Petroleum Hydrocarbons 2/3/92, Washington Hydrocarbon Identification Method WTPH-HCID, Iowa Method OA-2, and Wisconsin Department of Natural Resources Modified DRO - Method for Determining Diesel Range Organics.

Motor Oil Composite Standard

This composite solution is prepared from an equal volume blend of the following types of motor oil: 5W30, 10W30, 10W40, and 20W50. After blending, a precisely weighed amount of the composite is added to a volumetric flask to produce the standard.

50,000 μ g/mL in methylene chloride, 1mL/ampul

31464-500	31464-520	31564

Fuel Oil #4 Standard

Fuel Oil #4 is typically used in limited applications in which the fuel cannot be preheated prior to burning. The fuel is a blend of distillate (Fuel Oil #2) and residual (Fuel Oil #6) to meet ASTM viscosity specifications. Fuel Oil #4 used to prepare this mixture has a kinematic viscosity of 21.9 at 38°C (100°F), measured using ASTM D-445.

State of Iowa UST Monitoring

Contact Information

Iowa Department of Natural Resources

UST Section
Wallace State Office Building
900 East Grand
Des Moines, IA 50319
Phone: (515) 281-8135
Fax: (515) 281-7212

The Iowa Department of Natural Resources, Environmental Protection Division, maintains a UST/LUST website at:
<http://www.state.ia.us/dnr/organiza/wmad/lqbu-reau/ust/index.html>

The State of Iowa pools the UST parameters into one group for the purpose of certification. Iowa Administrative Code 567-135.16(455B) requires use of the following methodologies: Method OA-1, Method for Determination of Volatile Petroleum Hydrocarbons (Gasoline) revision 7/27/93 and Method OA-2 Method for Determination of Extractable Petroleum Products (And Related Low Volatility Organic Compounds) revision 7/27/93; EPA methods 525.2, 550, 550.1 for polynuclear aromatic hydrocarbons (PAHs) in drinking water; EPA methods 525.2, 550, 550.1, 610, 8100, 8270, 8310 for PAHs in water; EPA methods 8100, 8270, 8310 for PAHs in soil; and NIOSH 1501 for BTEX in soil gas.

Method OA-1 is a modification of EPA Method 8015 and is used to determine concentrations of volatile petroleum hydrocarbons and other individual components, including benzene, toluene, ethyl benzene, and xylenes, in water and soil/solids. Samples are analyzed using purge-and-trap sample concentration. Detection is achieved by GC/FID alone, by FID/PID in series, or by mass spectrometer (GC/MS). Identification and quantification are based on detector response to an external standard of commercial product.

Method OA-2 is a modification of EPA Method 8100, for determining diesel fuel, fuel oil, motor oil, kerosene, mineral spirits, or hydraulic fluid in a liquid or solid matrix. Laboratories use Method OA-2 to provide surrogate analysis of the PAHs based on default concentrations of the PAHs in certain petroleum-derived materials. This method covers the determination of low volatility petroleum products and organic compounds that are soluble in moderate to low polarity organic solvents. A capillary GC/FID method is used to quantify the compounds or mixtures of interest. GC/MS also may be used. Identification and quantification of various petroleum products is performed by comparing the chromatograms of samples and commercial products, preferably using computer data system overlay.

Gas Chromatography Columns & Accessories

For these items, see Restek's

Chromatography Products Catalog:

- Syringes
- Autosampler Vials
- Guard Columns
- Ferrules, Septa

Recommended Gas Chromatography Columns

Rtx[®]-5, 30m x 0.25mm

Film Thickness	temp. limits	Cat. #
0.25μm	-60 to 330/350°C	10223
0.50μm	-60 to 330/350°C	10238
1.00μm	-60 to 320/340°C	10253

Integra-Guard™ Columns

Guard and analytical column in one continuous length.

*Add the appropriate suffix number to analytical column catalog number.

ID	Length	Suffix #
0.25mm	5m	-124
10mm		-127

Syringes

Standard Micro-Liter Syringes for Agilent 7673 and 7683 Autosamplers

Size	Needle Gauge	6-pk.
10μL	23s	20169
10μL	23s-26s	24600

Autosampler Vials

Crimp Top Vial Snap Seal™ Style (12 x 32mm, 11mm Crimp)

Description*	1,000-pk.
2.0mL Clear Glass Vial w/White Graduated Marking Spot	24384
2.0mL Amber Glass Vial w/White Graduated Marking Spot	24386

*Marking spots are available on request in blue, green, rust or yellow.

Aluminum Crimp Seals w/Septa

Description	1,000-pk.
Silver Seal, 11mm, PTFE/Natural Rubber Septa	21175
Silver Seal, 11mm, PTFE/Silicone Septa*	24360

*PTFE/Silicone/PTFE available on request.

Thermolite® Septa

Size	temp. limits	25-pk.	50-pk.	100-pk.
11mm (7/16")	to 340°C	20363	20364	20365

Replacement Inlet Seals

Stainless Steel Inlet Seal for Single-Column Installation*

Size	2-pk.	10-pk.
0.8mm ID	21315	21316

*Equivalent to Agilent Part# 18740-20880.

Inlet Liners

For Agilent GCs

Description	ID /OD & Length (mm)	ea.	5-pk.
Uniliner®*	4.0 ID, 6.3 OD x 78.5	20335	20336
Drilled Uniliner®	4.0 ID, 6.3 OD x 78.5	21054	21055
1mm Split**	1.0 ID, 6.3 OD x 78.5	20972	20973

*Restek design improves performance over the original Agilent Liner.

**Use this liner for increased sensitivity.

Low Volume Injector for Agilent GCs

Description	kit.
Low-Volume Injector for Agilent Split/Splitless GC Inlets	21692

Fuel Oil #6 Standard

This oil, sometimes called Bunker C or residual, is a black viscous fuel. Applications in which it may be used require the ability to preheat the fuel prior to pumping and burning.

5,000 $\mu\text{g/mL}$ in methylene chloride, 1mL/ampul

31249-500	31249-520	31349

Fuel Oil #4 Standard

Fuel Oil #4 is typically used in limited applications in which the fuel cannot be preheated prior to burning. The fuel is a blend of distillate (Fuel Oil #2) and residual (Fuel Oil #6) to meet ASTM viscosity specifications. Fuel Oil #4 used to prepare this mixture has a kinematic viscosity of 21.9 at 38°C (100°F), measured using ASTM D-445.

5,000 $\mu\text{g/mL}$ in methylene chloride, 1mL/ampul

31244	31244-510	—
	w/data pack	
31244-500	31244-520	31344

Fuel Oil #5 Standard

Fuel Oil #5 is typically used in applications in which there is little or no preheating of the fuel prior to burning. A blend of distillate (Fuel Oil #2) and residual (Fuel Oil #6), the Fuel Oil #5 used to prepare this mixture has a kinematic viscosity of 106.5 at 38°C (100°F), measured using ASTM D-445.

*Concentration varies lot to lot. See Certificate of Analysis for certified concentrations. See <http://www.restekcorp.com> for current certificate of analysis.

Mineral Spirits Standard: Unweathered

There are four general types of mineral spirits, classified according to boiling point range (BPR):

- Type I (Stoddard solvent) BPR 149–182°C
- Type II (high flash point) BPR 177–196°C
- Type III (odorless) BPR 149–196°C
- Type IV (low dry point) BPR 149–174°C

The mixtures listed below were prepared from an equal volume blend of Type I, II, and III mineral spirits.

Figure 1
Separate permanent gases in 10 minutes,
without cryogenic cooling.

ShinCarbon ST Micropacked GC Columns

RESTEK
Exclusive!

Above-Ambient Analyses of Permanent Gases and Light Hydrocarbons

- Separate permanent gases, including CO/CO₂, in 10 minutes, without cryogenic cooling.
- Rapid separations of permanent gas / light hydrocarbon mixtures.
- Excellent compatibility with most GC detectors—minimal bleed, minimal baseline rise.
- Pre-conditioned, less than 30 minutes to stabilize.

Analyzing the permanent gases oxygen, nitrogen, methane, carbon monoxide, and carbon dioxide has been virtually impossible for a single gas chromatography (GC) or gas-solid chromatography (GSC) column, without sub-ambient temperatures.

Now, Restek's new ShinCarbon ST material, a high surface area carbon molecular sieve (~1500 m²/g), is the ideal medium for separating gases and highly volatile compounds by GSC. A 2-meter by 1mm ID micropacked column containing ShinCarbon ST separates the permanent gases in 10 minutes, without cryogenic cooling (Figure 1).

In addition to providing a breakthrough in analyses of permanent gases, ShinCarbon ST columns can separate light hydrocarbon / permanent gas mixtures. Figure 2 shows an analysis of permanent gases plus acetylene, ethylene, and ethane, completed in less than 20 minutes. Natural gas components (70% methane) also are cleanly separated (Figure 3). Other potential applications for ShinCarbon ST include analyses of sulfur dioxide (Figure 4) and Freon® fluorocarbons (Figure 5). *

Figure 2
Rapidly analyze light hydrocarbon/
permanent gas mixtures.

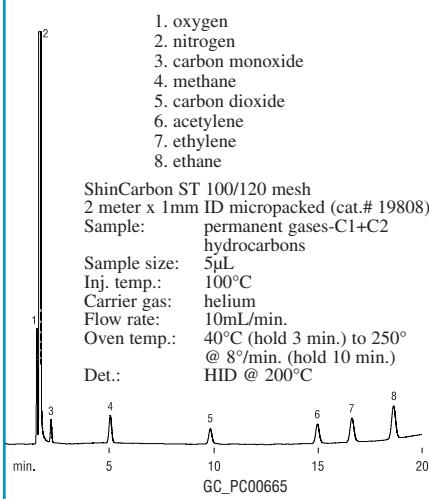

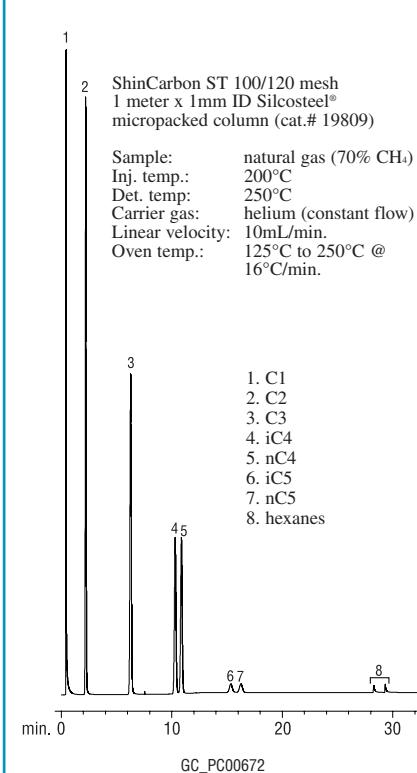

Figure 3
Separate components in natural gas.

*For analysis of other low molecular weight sulfur compounds, we recommend Rt-XLSulfur™ micropacked and packed columns or Rtx®-1 capillary columns.

ShinCarbon ST is a highly stable material. Its 330°C upper temperature limit minimizes bleed and baseline rise during temperature programming, making the material compatible with most detection systems used for gas analysis, including TCD or HID. All ShinCarbon ST columns are fully conditioned in an oxygen/moisture free environment to prevent contamination. This minimizes stabilization time (less than 30 minutes) when installing a new column which, in turn, minimizes downtime.

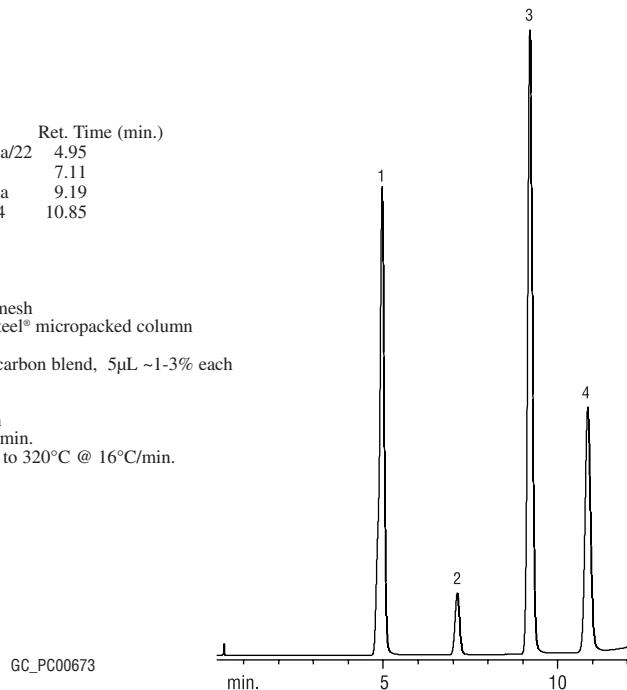

The unique properties of ShinCarbon ST make it an ideal packing material for analyses of gases and highly volatile compounds, including permanent gases, low molecular weight hydrocarbons, and Freon® gases. The rapid, above-ambient analyses these columns provide will be a great convenience. Excellent thermal stability of the high surface area carbon, combined with careful conditioning during column manufacture, ensures low-bleed operation and rapid stabilization when installing a new column. Custom-made ShinCarbon ST columns are available on request.

Aldehydes/Ketones DNPH Standard

For US EPA Methods TO-11A and 8315

- Convenient 15µg/mL concentration as aldehyde/ketone, similar to the concentration of interest in most ambient air work.
- Certificate of Analysis lists both aldehyde/ketone and -DNPH derivative concentrations.
- Fast analysis using a Restek Ultra C18 HPLC column .

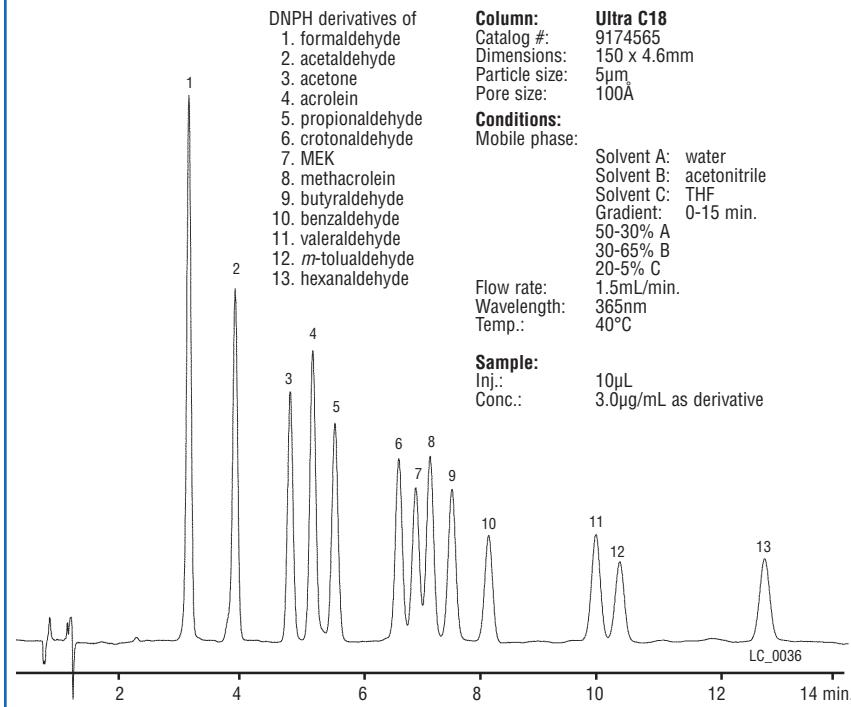

Carbonyl compounds, including low molecular weight aldehydes and ketones, are receiving increased attention by the regulatory community.

Formaldehyde is the target compound for US EPA Compendium Method TO-11A and Method 8315, but at least 14 other carbonyl compounds also can be detected and quantified. Method T0-11A modifies the sampling procedures outlined in earlier Method TO-5; the newer method is based on the specific reaction between carbonyl compounds and the 2,4-dinitrophenylhydrazine (DNPH) coating on a silica gel adsorbent (packed in cartridges), in the presence of a strong acid catalyst. The reaction produces stable, colored hydrazone derivatives.

To meet the needs of analysts monitoring these compounds, Restek offers a new 15-component aldehyde standard for US EPA Compendium Method TO-11A and Method 8315. The concentration of the mix components, 15µg/mL each, is similar to the concentration of interest in most ambient air work. For convenience, our Certificate of Analysis lists concentrations for both the aldehydes/ketones and the DNPH derivatives.

A 150 x 4.6 mm Ultra C18 HPLC column (cat.# 9174565) is optimal for fast, reliable analyses of the derivatives of formaldehyde, other aldehydes, and ketones.

Fast, reliable analyses of aldehydes and ketones on Restek's Ultra C18 HPLC column.

Silcosteel®-UHV

Patent pending.

Dramatically Reduce Outgassing in UHV Systems

Reduce outgassing, reduce pump-down time

- Silcosteel®-UHV layer can reduce outgassing by more than an order of magnitude, relative to heat treatment, in UHV environments.
- Reduced outgassing allows faster system pump-down.

Rugged, durable layer, for long-term reliable performance

- Silcosteel®-UHV layer will not delaminate.
- Stable to 600°C.
- Will not interfere with or be damaged by knife edge of Conflat® sealing flange.
- Reduces galling.

Custom service

- Apply Silcosteel®-UHV layer to a broad range of components.
- Treat complicated geometries and fine structures.

Ultra-high vacuum (UHV) environments of 10^{-7} torr or lower are critical for many instruments and systems used to analyze and manipulate the properties of materials, surfaces, or atomic structure. Under these vacuum conditions, steel components outgas large quantities of water, CO₂, CO, and other contaminant molecules. Until now, large pumping systems and extensive bake-out treatments have been required to remove these materials from the UHV environment.

A Silcosteel®-UHV layer significantly reduces outgassing by steel components in UHV systems. Applied to and incorporated into the steel surface, the Silcosteel®-UHV layer acts as a barrier, isolating any materials trapped on or in the steel and preventing them from entering the UHV environment, without liberating any contamination of its own. Figure 1 demonstrates the dramatic improvement attained by using Silcosteel®-UHV-treated components in a UHV assembly, relative to heat-cleaned components. After 10 hours under vacuum at 61°C, the Silcosteel®-UHV coated part demonstrated a 14-fold lower outgassing rate than the heat-cleaned part* (note circled area in Figure 1b). Clearly, Silcosteel®-UHV-treated parts make it possible to achieve and maintain a UHV environment with less pumping capacity and conservative bake-out requirements.

Figure 1a

Silcosteel®-UHV-treated vacuum system components show significantly less outgassing, compared to heat-cleaned* components.

Pressure Increase with Heat After 1 hr Under Vacuum

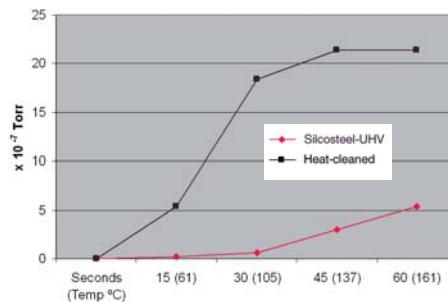

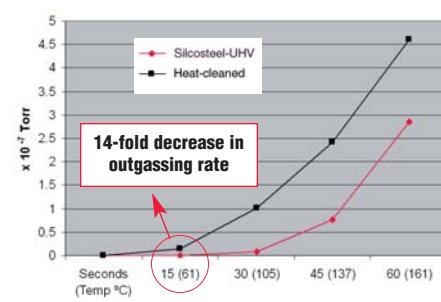

Figure 1b

After 10hr under vacuum, Silcosteel®-UHV-treated component continues to show significantly less outgassing. Note change in y-axis scale compared to Figure 1a.

Pressure Increase with Heat After 10 hr Under Vacuum

System: standard turbomolecular pump, 360L/sec;
Test pieces: all metal seals independently heated, isolated closed end thimbles; 4.5" x 1.5" OD
Base pressures: 4.6 x 10^{-7} Torr at 1hr
7.5 x 10^{-8} Torr at 10hr

*Heat cleaned—test piece cleaned ultrasonically in an aqueous caustic bath, followed by 400°C under vacuum.

Figure 2

The durable Silcosteel®-UHV layer will withstand the sealing requirements of UHV, maintaining knife edge integrity.

The Silcosteel® layer is a general purpose passivation layer for metals.

Siltek™ provides the ultimate passivation for many surfaces, from glass to high nickel alloys of steel.

Sulfinert™ coating on metal components is required when analyzing for parts-per-billion levels of organo-sulfur compounds.

Silcosteel®-UHV

Patent pending.

Dramatically Reduce Outgassing in UHV Systems

The Silcosteel®-UHV layer is rugged and durable enough to stand up to the sealing requirements needed to attain a UHV environment. Figure 2 shows the knife-edge of a Silcosteel®-UHV-treated Conflat® sealing surface. The knife-edge penetrates and seals in the copper O-ring seated within the Conflat® surface. Even after multiple executions of this sealing process, the Silcosteel®-UHV layer remains intact.

Initial work with applying a Silcosteel®-UHV layer to Conflat® fitting bolts—without using anti-seize material—has demonstrated a decrease in galling. After sealing and thermal cycling, the bolts were easily removed from the Conflat® flange without galling.

Silcosteel®-UHV treatment is a custom service, available exclusively from Restek Corporation. For information on treating system components with Silcosteel®-UHV passivation, contact Restek, or your Restek representative.

About Us

Restek's involvement in coatings began in 1987. The focus of our initial work was to produce a coating on stainless steel that was inert to low-level reactive organic compounds, such as explosives and volatile organic compounds (VOCs).

The end product from this work was the Silcosteel® coating for stainless steel tubing. Silcosteel® coated tubing currently is used for construction of analytical testing equipment by all major manufacturers of gas chromatography sampling and testing equipment.

Restek's headquarters are in Bellefonte, Pennsylvania, USA, with distributors and representatives in over 60 countries.

Since this initial project, Restek's coatings experts have developed a family of coatings to address other specific needs and thereby enhance the performance of system components. In brief, these coatings are:

- **Silcosteel®**—A general purpose passivation layer for steel and stainless steel.
- **Silcosteel®-CR**—A corrosion resistant layer that increases the lifetime of system components in acidic environments containing hydrochloric, nitric, or sulfuric acid. Patent pending.
- **Silcosteel®-UHV**—Used to reduce outgassing by components of ultra-high vacuum systems. Patent pending.
- **Silcosteel®-AC**—Dramatically reduces carbon buildup on stainless steel components. Patented.
- **Siltek™**—Provides the ultimate passivation of coated components, from glass to high nickel alloys of steel. Patented.
- **Sulfinert™**—A required coating on metal components when analyzing for parts-per-billion levels of organo-sulfur compounds. Patented.

Restek coatings are now used in many applications, spanning multiple industries and market areas. Restek coated components increase the lifetime of stack monitoring equipment exposed to sulfuric acid. Coated injector nozzles have longer service life because coking is inhibited. Sulfinert™-coated sampling equipment increases the reliability of process measurements in refineries and petrochemical plants. A mass spectrometer manufacturer demands Silcosteel®-coated parts to increase instrument sensitivity for analyzing pesticides. Restek coated air sampling equipment is used to sample diverse environments, from city air to submarine cabins. Let us solve your surface activity problems. Contact Dave Smith at 800-356-1688 or 814-353-1300, x 2154, or by email at daves@restekcorp.com.

Allure™ C18 high carbon load phase is ideal for LC/MS applications

The sensitivity of LC/MS analyses is strongly affected by the percentage of organic content in the mobile phase. High organic content can greatly increase LC/MS signal-to-noise ratio. However, most commercial C18 phases contain only 10 to 15% carbon load so that less organic must be used in the mobile phase to retain solutes. The Allure™ C18 phase has a 27% carbon load, which results in increased retention and increased LC/MS sensitivity, even with high organic mobile phases. In the LC/MS analysis of steroids, the Allure™ C18 column shows a 26 % increase in sensitivity when compared to a conventional C18 phase (Figure 2).

Figure 2

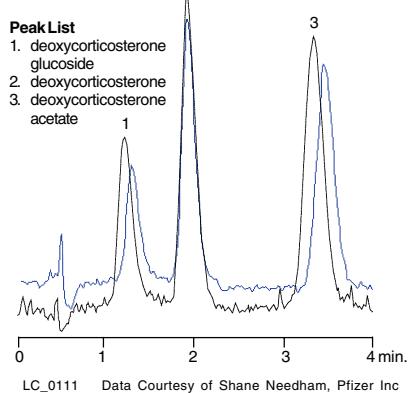

Allure™ C18 Columns Show a 26% Increase in LC/MS Sensitivity for Slightly Polar Steroids Compared to Conventional C18

Allure™ C18 HPLC Columns

Maximum Retention and Peak Symmetry

Restek's Allure™ C18 column is designed using a simple yet unique bonding chemistry that offers improved resistance to hydrolysis and superior batch-to-batch reproducibility. The high carbon load phase exhibits maximum retention characteristics, making it ideal for liquid chromatography/mass spectrometry (LC/MS) applications. The phase is bonded onto a highly base-deactivated Type B silica, resulting in improved peak symmetry, even for basic analytes. The Allure™ C18 column can be used to analyze a wide range of compounds, from steroids and antibiotics to explosives (Figure 1).

Features & Benefits

Feature	Benefit
Highly base-deactivated silica.	Excellent peak symmetry for basic compounds.
Unique bonding technology resists hydrolysis of bonded phase.	More consistent retention times and longer column lifetime.
Excellent batch-to-batch consistency.	Reproducible analyses.
High carbon load phase.	Improved LC/MS sensitivity and HPLC resolution.

Figure 1

Allure™ C18 separates all US EPA Method 8330 explosives in under 10 minutes.

Commonly Asked Questions

• How is the Allure™ C18 column different from other C18 columns?

The Allure™ C18 column has a much higher carbon load, which increases retention of non-polar compounds and improves LC/MS sensitivity. The unique bonding chemistry produces a high ligand density, which resists hydrolysis. These design benefits result in more consistent retention times and longer lifetimes.

• What are the particle and pore sizes of the silica used for the Allure™ C18 phase?

The Allure™ C18 is made from a 5µm, spherical Type B silica with a 60 Angstrom pore size.

• What are the pH and temperature limits for the Allure™ C18 phase?

The Allure™ C18 phase can be used from pH 2.5 to pH 7.5, and at temperatures up to 80°C.

• How does Restek ensure phase reproducibility and column quality?

A minimum of three lots of material are produced and verified for consistency using several analytical techniques. In addition, each lot of material must meet stringent chromatographic reproducibility requirements before release, and each column is individually tested before shipment.

• Are guard cartridges available for the Allure™ C18 columns?

Restek's unique Trident™ guard cartridge system is available for the Allure™ C18 column. The integral leak-free design of the Trident™ system contains a cap frit that can be replaced easily without disturbing the packed bed. The guard cartridge, packed with the Allure™ C18 phase can be replaced easily. A stand-alone guard column is also available.

Ultra IBD HPLC Columns

Excellent Peak Shape for Acids and Bases

Restek's Ultra IBD (intrinsically based deactivated) phase exhibits excellent peak shape and selectivity for acids, bases, zwitterions, and polar compounds. In contrast to conventional C18 columns, the Ultra IBD phase contains a polar functional group within the hydrocarbon bonded chain. This allows the column to retain solutes not only by hydrophobic interactions, but also by polar attraction forces between the stationary phase and the analyte.

Features & Benefits

Feature	Benefit
Separates acids, bases, zwitterions, and neutral compounds.	One column can analyze a wide range of compounds simultaneously.
Can be used with a wide range of mobile phase polarity and pH.	More flexibility with method development.
Excellent batch-to-batch consistency.	Reproducible analyses.
Highly retentive phase.	Improved LC/MS sensitivity and HPLC resolution.

Figure 1a

Restek's Ultra IBD column exhibits excellent peak shape for acidic and basic compounds at a neutral pH.

Peak List: Conc.(μ g/mL)

1. uracil 5
2. benzoic acid 50
3. maleate 5
4. trimipramine 50
5. nortriptyline 50
6. amitriptyline 50

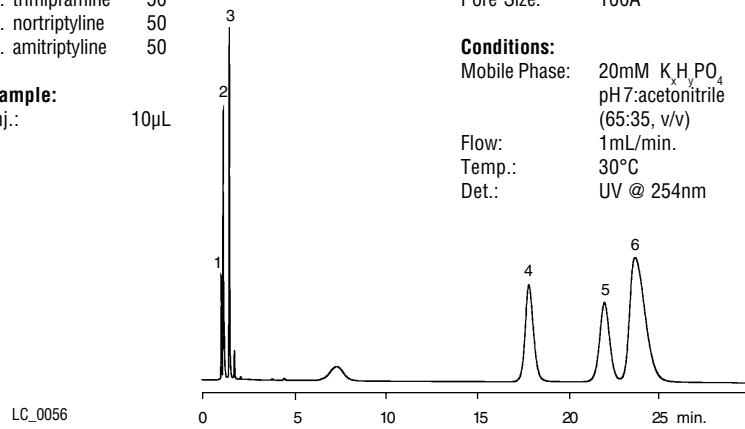

Sample:

Inj.: 10 μ L

Column: Ultra IBD

Catalog #: 9175565
Dimensions: 150 x 4.6mm
Particle Size: 5 μ m
Pore Size: 100Å

Conditions:
Mobile Phase: 20mM K_2HPO_4
pH 7:acetonitrile (65:35, v/v)
Flow: 1mL/min.
Temp.: 30°C
Det.: UV @ 254nm

At-a-Glance
Product
Information
from Restek

Peak shape of basic compounds on bonded phase silica can be improved by lowering the pH to protonate active silanols. However, doing so can cause problems with some samples that are labile at acidic pH conditions. The Ultra IBD column performs well even under neutral pH mobile phase conditions. Figures 1a and 1b show the separation of acidic and basic compounds under neutral and acidic mobile phase conditions. The two elution order reversals between Figures 1a and 1b demonstrate how selection of pH can be used to alter selectivity.

Figure 1b

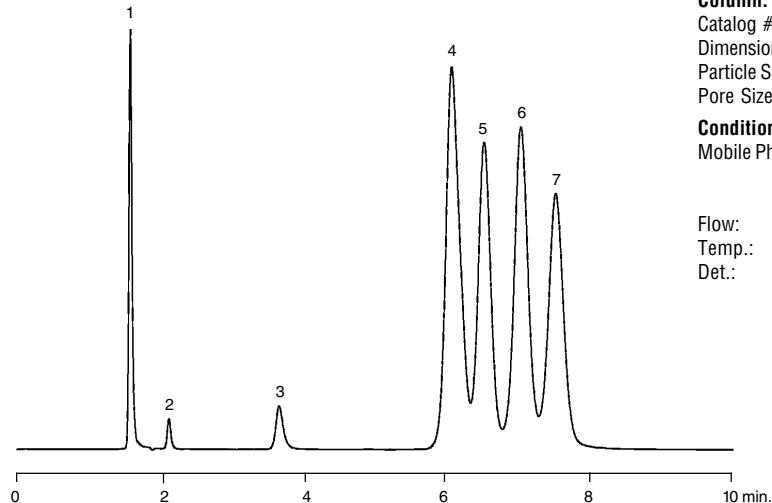

Restek's Ultra IBD column exhibits excellent peak shape for acidic and basic compounds at an acidic range of pH.

Peak List: Conc. (µg/mL)

1. uracil	5
2. unknown	
3. maleate	5
4. benzoic acid	50
5. nortriptyline	50
6. amitriptyline	50
7. trimipramine	50

Sample:

Inj.: 10µL
Solvent: mobile phase

Column: Ultra IBD

Catalog #: 9175565
Dimensions: 150 x 4.6mm
Particle Size: 5µm
Pore Size: 100Å

Conditions:

Mobile Phase: 20mM KH₂PO₄, pH3:acetonitrile (70:30, v/v)
Flow: 1mL/min.
Temp.: 30°C
Det.: UV @ 254nm

Figure 2

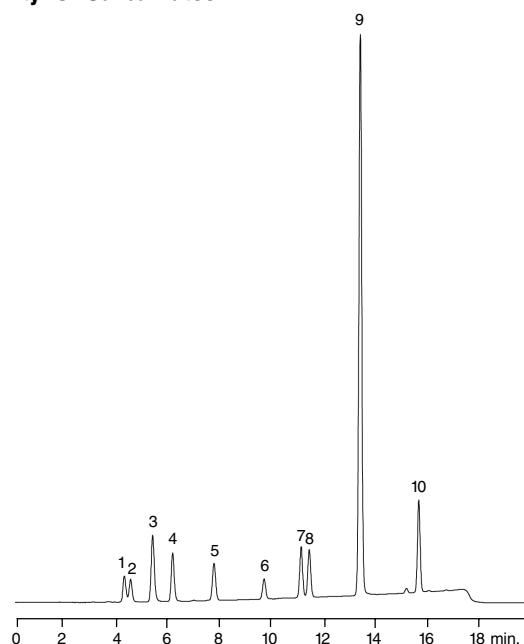

Ultra IBD shows great selectivity for Carbamates.

Peak List:

1. aldicarb sulfoxide
2. aldicarb sulfone
3. oxamyl
4. methomyl
5. 3-hydroxycarbofuran
6. aldicarb
7. propoxur
8. carbofuran
9. carbaryl
10. methiocarb

Sample:

Inj.: 5µL
Solvent: methanol
Conc.: 1mg/mL each component

Column: Ultra IBD

Catalog #: 9175565
Dimensions: 150 x 4.6mm
Particle Size: 5µm
Pore Size: 100Å

Conditions:

Mobile Phase: water:methanol (80:20 to 20:80 in 15 minutes)
Flow: 1mL/min.
Temp.: ambient
Det.: UV @ 220nm

Commonly Asked Questions

- **Why is the Ultra IBD different from other HPLC columns?**

The Ultra IBD phase incorporates a polar functional group within the hydrocarbon chain, resulting in a column that exhibits excellent peak shape for acids, bases, zwitterions, and neutral compounds. The unique chemistry of this phase allows compounds to be retained by both hydrophobic and polar interactions.

- **What advantage does the Ultra IBD offer for LC/MS analyses?**

Mobile phases with high aqueous content are required to obtain adequate retention of polar analytes with most conventional reverse phase packings. However, mobile phases with high aqueous content can cause sensitivity loss in LC/MS analyses. The polar interaction of the Ultra IBD phase provides excellent retention with higher organic content mobile phases, and also greatly reduces or eliminates the need for mobile phase modifiers that are often required to obtain symmetrical peaks and/or sufficient retention when analyzing highly polar compounds with other columns. This makes the Ultra IBD much more compatible with MS detection than traditional straight chain alkyl stationary phases.

- **What are the particle and pore sizes of the silica used for the Ultra IBD phase?**

The Ultra IBD is offered in both 3 and 5 μ m, spherical Type B silica with a 100 Angstrom pore size.

- **What are the pH and temperature limits for the Ultra IBD phase?**

The Ultra IBD phase can be used from pH 2 to pH 8 and at temperatures up to 80°C.

- **Are guard columns available for the Ultra IBD columns?**

Restek's unique Trident™ guard column system is available for the Ultra IBD column. The integral leak-free design of the Trident™ system contains a cap frit that can be replaced easily without disturbing the packed bed. The guard cartridge, packed with the Ultra IBD phase also can be replaced easily as needed.

Minimize Adsorption of Active Analytes, Using a Drilled Uniliner® GC Inlet Liner

Two Configurations, to Match Chromatographic Conditions

In sample injections into a hot splitless injection port liner, a typical 1 μ L sample expands to a volume of hundreds of microliters.¹ The sample solvent vapor, and the analytes, fill the entire injector system. During sample expansion, analyte molecules come in contact with hot, active surfaces outside the injection port liner, and occupy the dead volume at the bottom of the injection port, below the inlet end of the column (Figure 1). In splitless injection mode, there is very little carrier gas flow in this area to carry the analytes back up to the column inlet. This situation is most noticeable with active compounds that degrade when they come in contact with active surfaces; recoveries can be significantly reduced. In addition, late-eluting compounds that do not readily vaporize are affected by injection port discrimination.

The innovative geometry of a Drilled Uniliner® inlet liner minimizes active sites in the sample pathway, and reduces injection port discrimination. The analytical column connects to the bottom of a Drilled Uniliner® inlet liner via a Press-Tight® seal (Figure 1), eliminating sample contact with any part of the injector below the column inlet. Recoveries of active analytes are significantly improved.² Additionally, the hole in the side of the liner allows the injector to be operated in traditional split/splitless mode.

Restek offers Drilled Uniliner® inlet liners in two configurations (Figure 2). The liner to use depends on the analysis, and how closely the early-eluting compounds elute to the solvent peak.

In flash on-column injections, all of the solvent is transferred from the injector to the column, producing a substantial solvent peak tail. Splitless injection eliminates the solvent tail, because the injector goes into the split mode after the compounds of interest are transferred to the column, and all solvent remaining in the injection port is flushed out through the purge vent. The solvent peak ends abruptly, as shown in Figure 3a. Elimination of the solvent peak tail is an advantage to using the splitless injection technique when analyzing compounds that elute close to the solvent.

A Drilled Uniliner® inlet liner produces a distinctly different solvent peak shape than the single gooseneck splitless liner, as shown in Figure 3. The most noticeable difference is the peak width; the peak is considerably narrower than the peak from the single gooseneck liner. The position of the hole in the Drilled Uniliner® also affects solvent peak shape. A Drilled Uniliner® with the hole near the bottom produces a sharply ending solvent peak, similar to that from a single gooseneck liner (Figure 3b). This liner is a direct replacement for a splitless liner, and should be used when analytes elute closely behind the solvent.

Figure 1 — Inlet liner geometry affects analyte recovery.

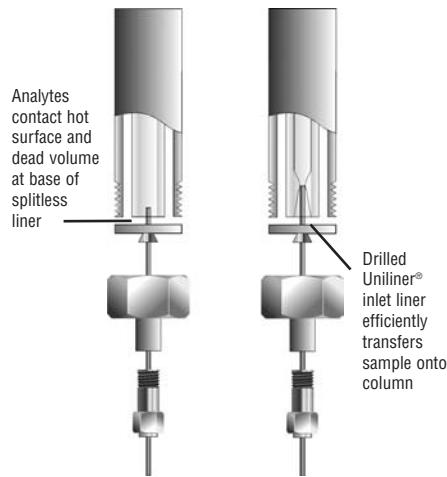

Figure 2 — Drilled Uniliner® inlet liners are available in two configurations. The hole allows the injector to be operated in split/splitless mode.

Use hole near bottom configuration if analytes elute near the solvent peak

Use hole near top configuration if analytes elute later than the solvent peak, or when the sample solvent is water

Drilled Uniliner® GC Inlet Liners

At-a-Glance
Product
Information
from Restek

Continued from page 1

Under the same conditions, a Drilled Uniliner® with the hole near the top produces a solvent peak with a small tail (Figure 3c). This is because solvent remaining in the liner, between the hole and the column entrance, is not swept out of the injection port when the injector goes into the split mode. Consequently, we recommend this liner for analyses in which the analytes would not be affected by a solvent tail, such as chlorinated pesticide analysis. A Drilled Uniliner® with the hole near the top will provide the best transfer of analytes to the column, and is recommended when transfer of analytes to the column is paramount. A Drilled Uniliner® with the hole near the top also exhibits excellent reproducibility for analysis of glycols in water³.

For accurate, reproducible, problem-free split/splitless injections, we recommend you use a Drilled Uniliner® inlet liner—and connect it to a Restek capillary GC column.

HOT Tech Tip!

Drilled Uniliner®

The Drilled Uniliner® with the hole near the bottom is recommended for analysis in which compounds of interest could be affected by a tailing solvent peak. The Drilled Uniliner® with the hole near the top is recommended for aqueous injections, as well as analysis in which the compounds of interest elute away from the solvent peak.

Liner Deactivations

Intermediate Polarity (IP) Deactivation

- Phenylmethyl-deactivated surface for better recovery of polar and nonpolar compounds.
- Compatible with most common solvents.
- Our standard deactivation—every Restek liner is IP deactivated unless otherwise requested.

Siltek™ Deactivation

- Revolutionary deactivation for difficult matrices and reactive compounds.
- Inertness retained over a wide sample pH range.
- Minimal bleed.
- Ideal for chlorinated pesticide analysis; lowers endrin breakdown to less than 1%.
- Recommended for use with Rtx®-CLPesticides, Stx™-CLPesticides, Stx™-1HT, and Rtx®-TNT columns.

Base Deactivation

- Excellent inertness for basic compounds.
- Recommended for use with Rtx®-5 Amine, Rtx®-35 Amine, and Stabilwax®-DB columns.

Siltek™ Deactivation—The Next Generation

- Maximizes the inertness of the sample pathway.
- Minimizes breakdown.
- Low bleed.
- Thermally stable.
- “Clean and green”—manufactured without the use of harmful organic solvents.

Restek offers the next generation of deactivation. The Siltek™ deactivation process (US Patent 6,444,326) produces a highly inert glass surface, that features high temperature stability, extreme durability, and low bleed. Try Siltek™ liners, guard columns, wool, and connectors for better recovery of sample analytes.

Add the corresponding suffix number to the liner catalog number. (Additional cost.)

qty.	Siltek™	Siltek™ with Siltek™ wool	Siltek™ with CarboFrit™

5-pk.	-214.5	-213.5	-216.5
25-pk.	-214.25	-213.25	-216.25

A Good Word

“I installed Siltek™ liners on one of our GCs to replace standard quartz liners that required deactivating daily. I found the results to be excellent, saving many hours of instrument time with no detrimental effects on the analysis.”

Matthew Turner, Laboratory Manager-food contaminants, Global Analysis (UK)

COOL TOOLS!

for GC and HPLC

Restek Innovation Saves
You Time and Money

Ceramic Scoring Wafers

- Four straight scoring edges for cutting fused silica tubing and four serrated edges for cutting MXT® metal capillary columns.
- Sure-grip handle included.

Hold the scoring wafer at a 45° angle to the tubing. Use gentle pressure and a smooth, perpendicular stroke.

**Make clean,
square cuts**

Check the cut against the white of the scoring wafer. Look for a clean, square cut.

Description

Ceramic Scoring Wafers

qty.

5-pk.

cat.#

20116

Scoring Wafer with Handle

- Unique, ergonomic handle is made of soft, comfortable rubber.
- Ceramic wafer is serrated on one side and straight-edged on the other to cut both fused silica and metal tubing cleanly.

Hold tubing firmly in one hand, allowing about two inches to extend freely. Hold the scoring wafer at a 45° angle to the tubing. Exert slight pressure—just enough to put a slight arc in the tubing. Pull perpendicularly across the tubing.

**Great scoring,
comfortable
grip**

The tubing should fall off on its own, or it should easily break at the score with a slight tap of the wafer. Check the cut against the white of the scoring wafer. Look for a clean, square cut.

Septum Puller

- Keep several on hand in your laboratory—can be used in many different ways.
- Use hooked end for removing septa and O-rings; pointed end works well for removing stuck ferrule fragments.

Dislodge a stuck ferrule quickly and easily—with out scoring the fitting.

Remove septa without damaging an expensive weldment.

Inlet Liner Removal Tool

- Easily remove liner from injector.
- Made from high-temperature silicone.
- Won't chip or crack the liner.

Gently push the liner removal tool onto the liner in the injection port, with a slight circular motion.

Slowly pull the liner out of the injection port in a straight vertical motion.

Use the liner removal tool to place a new liner into the injection port, avoiding hot metal surfaces.

Inlet Liner Packing Tool

**Eliminate
user
variation!**

- Position wool reproducibly every time.
- Accurate placement to a specific, measured depth, up to 100mm.

Recommended for inlet liners with an ID \geq 2mm.

Loosen the nut on the side of the tool and adjust the gauge to the manufacturer's recommended depth.

Place a one-centimeter plug of loosely bound wool at the top of the inlet liner.

Insert the liner packing tool into the liner until the tool bottoms out. Remove the tool. The wool is now positioned correctly in the liner and the liner is ready for use.

Injection Port Repair Tool

- Resurfaces critical inlet seal areas.
- For Agilent split/splitless injection ports.

**Remove contaminants,
achieve a better seal!**

The critical seal at the base of a split/splitless injector allows a seal to form between the injection port and the inlet liner. This critical seal wears over time and may become scratched or pitted, which compromises the sealing ability of the injector. Use the Restek injection port repair tool to easily resurface the inlet seal and remove contaminants; it saves time and money by preventing leaks.

Capillary Installation Gauge for Agilent 5973 MS

- Pre-seats ferrule onto column for consistent installations.
- Made from high-quality stainless steel.

Install the nut and ferrule onto the column, then insert the column through the installation tool, exposing several centimeters at the exit end. Tighten the nut.

Score and remove the exposed end of the column, then loosen the nut.

The ferrule will be properly seated and should remain in place when light force is applied. Install the column into the GC/MS interface.

Description	Similar to Agilent part #	qty.	cat.#
Capillary Installation Gauge for Agilent 5973 MS	G1099-20039	ea.	21894

Easily pre-seat ferrules for consistent installations!

Capillary Installation Gauge

- Pre-seats graphite* ferrule onto column for consistent installations.
- Prevents crushed column ends.
- Made from high-quality stainless steel.

Install the column nut and ferrule onto the capillary column. Cut the column end squarely. Slide the column into the installation gauge to the recommended insertion distance. Finger-tighten the column nut.

Tighten the assembly with moderate force to ensure a properly seated ferrule. Loosen the assembly and remove the column and column nut with seated ferrule.

The ferrule will be properly seated in the column nut, and should remain in place when light force is applied. If it slides loosely on the column, repeat procedure.

Capillary Installation Gauge for Agilent-style fittings (compact ferrules)	ea.	21034
Capillary Installation Gauge for $1/16$ " fittings ($1/16$ " ferrules)	ea.	21399

*Recommended for use with graphite ferrules.

Rethreading Tool

- Repair worn or damaged threads.
- Multiple uses (fittings, injectors, detectors, etc.)
- Built-in guide to prevent cross-threading.

Due to constant installation, removal, and exposure to extreme temperature changes, threads on GC parts become worn and damaged. This can cause a poor seal, and oxygen can enter the system, compromising analytical results and possibly destroying expensive analytical columns.

Screw the rethreading tool completely onto the injection port in a clockwise direction. Depending on the severity of thread damage, this may require some force.

MLE Capillary Tool Kit

Make life easier! The MLE Tool Kit conveniently provides tools necessary for installing and maintaining capillary columns.

The MLE Tool Kit includes:

- Rubber-tipped slide-lock tweezers.
- 15cm compact steel ruler.
- Three ceramic scoring wafers with handles.
- Pocket magnifier.
- Four-inch tapered needle file.
- Six stainless steel jet reamers (0.25–0.65mm OD).
- Septum puller.
- Three nylon brushes ($\frac{1}{8}$ -, $\frac{3}{16}$ -, and $\frac{1}{4}$ -inch OD).
- Pipe cleaner (one-foot length).
- $\frac{1}{4}$ " x $\frac{5}{16}$ -inch wrench.
- $\frac{3}{8}$ " x $\frac{7}{16}$ -inch, $\frac{7}{16}$ " x $\frac{1}{2}$ -inch, and $\frac{1}{2}$ " x $\frac{9}{16}$ -inch wrench.
- One-meter length of high-temperature string (400°C).
- Stainless steel surface brush.
- Mini wool puller/inserter tool.
- Inlet liner removal tool.
- Three stainless steel tube brushes ($\frac{3}{16}$ -, $\frac{1}{4}$ -, and $\frac{3}{8}$ -inch OD).
- 25-pack cotton swabs.
- Flashlight.
- Column installation gauge for Agilent-style nuts.
- Mini hand drill set.

Chromatography Columns and Supplies Catalog

(lit. cat.# 59854)

Designed by chromatographers, for chromatographers.

The 2004 Restek catalog features unique new GC and HPLC columns, problem-solving chromatography tools and accessories, high-value instrument parts, sample collection and sample preparation products, many new reference chemical mixes, proprietary surface treatments for sample pathways, new chromatograms, and more.

Inlet and FID Maintenance Kits for Agilent GCs

- Include the most common consumable supplies.
- All parts meet or exceed performance of instrument manufacturer's parts.
- Parts list makes reordering easy.

The Inlet Maintenance Kit includes these tools and many others.

Dislodge ferrules or remove silica deposits with the Jet Reamer/Ferrule Remover.

The Capillary Installation Gauge makes seating the ferrule and installing the column consistent and easy.

The Inlet Liner Removal Tool safely removes an inlet liner from a hot injection port without cracking the liner.

Inlet kit includes:

- 0.4, 0.5, and 0.8mm ID graphite ferrules.
- Viton® O-rings.
- Capillary nuts.
- Inlet seals.
- Reducing nut.
- Scoring wafer.
- 11mm Thermolite® septa.
- 4.0mm single gooseneck liner.
- 4.0mm split liner with wool.
- Capillary column caps.
- $\frac{1}{4}$ " x $\frac{5}{16}$ -inch wrench.
- Septum puller.
- Installation gauge.
- Wire cleaning brush.
- Jet reamers/ferrule removers.
- Inlet liner removal tool.

The FID Maintenance Kit includes these tools and many others.

FID maintenance made easy with tools and replacement components specifically matched to your instrument.

The FID ignitor meets original equipment specifications.

The high-performance Siltek™ FID jet will stay clean longer—even when exposed to highly active compounds.

FID kits include:

- $\frac{1}{4}$ -inch, 0.4, 0.5, and 0.8mm ID graphite ferrules.
- FID/NPD capillary adaptor.
- Capillary nuts.
- Jet reamers/ferrule removers.
- $\frac{1}{4}$ -inch nut.
- Scoring wafer.
- Capillary column caps.
- Ignitor for Agilent 5890 or 6890/6850 GCs.
- FID flow measuring adaptor.
- $\frac{1}{4}$ " x $\frac{5}{16}$ -inch wrench.
- Installation gauge.
- Wire cleaning brush.
- High-performance Siltek™-treated FID jet for Agilent 5890 or 6890/6850 GCs.
- $\frac{1}{4}$ -inch nut driver for jet removal.

PEEK® Fitting Extractor	ea.	25325

HPLC Piston Seal Insertion Tool

- Simplify pump maintenance.
- One end removes old piston seal, other end easily and securely installs new seal.

Do you have to search for a paper clip or screw to remove worn seals from your HPLC pump? Then, once you get the old seal out, do you struggle to correctly seat the new seal? Now Restek has a tool that can help. Use one end to remove your old seal, then simply slip your new seal on the other end and push it flush into position. The tool cannot mar the surrounding metal surface of the pump housing.

Hot Tech Tip!

High backpressure is one of the most common problems encountered when performing HPLC analysis. Normal column backpressure is observed after a new column has been installed and equilibrated with the mobile phase. Unfortunately, this pressure will often increase with use because of particulates collecting on the column inlet frit.

The source of these particles can be from sample impurities, mobile phase contaminants, and the injector or autosampler rotor seal. The presence of particles can result in increased backpressure, split peaks, tailing, and eventually over-pressure shut-down. In some circumstances, these problems can be corrected by back-flushing the column. However, in many cases it results in an unusable column.

To reduce backpressure problems, all samples and mobile phase solvents must be filtered before use; and rotor seals should be changed on a routine basis. Along with these preventative measures, it is advisable to use column prefilters such as the Trident™ column protection system. When using a prefilter, particles build up on its inexpensive, replaceable frit, instead of the permanent frit at the head of the column.

Trident™ Guard Column Protection Systems save you time and money!

Trident™ Integral HPLC Guard Column System

Offers Maximum Protection Against Contaminants and Particulate Matter

Features & Benefits

Feature	Benefit
Protection against both contaminants and particulates	Extends column life and saves money
Integral leak-free design	Eliminates connecting tubing and extra dead volume
Multiple configuration	Provides the appropriate level of protection
Easy to install	Convenient, time-saving installation
Replaceable external frit	Protects column and guard from particulates

The system's foundation consists of the analytical column configured with our exclusive Trident™ end fitting and XF fitting. This configuration contains the standard internal frit as well as a replaceable cap frit, which can be easily changed without disturbing the packed bed. Changing the external frit can reverse the effects of accumulated particles, such as high backpressure or peak distortion. To obtain this basic configuration, simply order any Restek HPLC column that has a (-700) suffix catalog number.

For maximum protection against contaminants and particulate matter, the system can be configured with both an integral guard cartridge and a replaceable external frit. To obtain this configuration, simply order any Restek HPLC column that has a (-700) suffix catalog number, the XG-XF male fitting (cat.# 25026), and the appropriate pack of guard cartridges (see back).

Commonly Asked Questions

- **Can the Trident™ Integral Guard system be used with other manufacturers columns?**

Due to the Trident's integral design, the inlet end fitting is specifically machined to accept the XF or XG-XF male fitting. Therefore the Trident™ Integral Guard system can only be used with columns manufactured by Restek.*

- **How do I know which Trident™ Guard system is right for me?**

The standard Trident™ XF system provides protection against particulate matter while the high-performance XG-XF system protects against particulates as well as chemical contaminants or sample impurities.

- **How do I order the XG-XF system?**

Simply order any Restek HPLC column that has a (-700) suffix catalog number, an XG-XF fitting (cat.#25026), and the appropriate pack of guard cartridges (see below).

* A stand alone version of the Trident system is available which can be used with other manufacturers columns. Please call for more information.

Achieve specialty alloy performance using austenitic stainless steels!

Restek
Exclusive!

Restek
Performance
Coatings

Enhance the corrosion resistance of steel and stainless steel, using Silcosteel®-CR treatment:

- Prolong component lifetimes.
- Reduce the need for preventive maintenance.
- Reduce contamination caused by corrosion.
- Save money, relative to using super alloys.

In acidic environments it is critical to engineer solutions to account for the depreciation of equipment caused by corrosion. Current commercial solutions that address corrosion are specialized alloys (e.g., Inconel®, Monel®, Hastelloy®)—or coatings.

Coatings often are employed as acid-resistant barriers between the corrosive environment and the equipment. Silcosteel®-CR surface treatment offers major advantages over traditional coatings: our chemical vapor deposition process incorporates the coating into the stainless steel lattice, eliminating delamination and blistering, common problems with traditional overlay coatings which rely primarily on primers or surface tension to remain in contact.

We developed the Silcosteel®-CR treatment specifically to protect equipment exposed to hydrochloric acid, nitric acid, sulfuric acid, or marine environments. A Silcosteel®-CR treatment upgrades the corrosion resistance of 300-grade stainless steels by greater than an order of magnitude.

A Silcosteel®-CR treatment is both durable and flexible. The coating builds from many starting points on the steel surface. Repeated overlaying as the coating grows on the surface creates a dense, chemically inert layer. The layering process also creates flexibility—coated components can be worked into place without cracking, chipping, or otherwise damaging the coating.

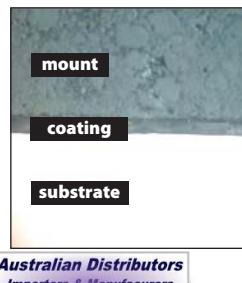

Figure 1 shows a cross-section optical micrograph of a Silcosteel®-CR treated coupon having a surface roughness average of 16 micro inches. The dense, well-bonded layer will afford reliable protection from acidic media. Several standardized corrosion testing protocols have been performed on the Silcosteel®-CR treatment. Below are the results of some of these tests.

Pitting and Crevice Corrosion Testing of Silcosteel®-CR Treated 316L Stainless Steel Coupons and Bare Coupons, by ASTM G 48, Method B

Each sample was weighed to the nearest 0.0001 gram, then a rubber gasket was wrapped around the center to simulate a crevice. Each sample was immersed in 6% by weight ferric chloride solution for 72 hours, per the ASTM test method. After 72 hours, the sample was recovered, the rubber gasket was removed, the sample was rinsed with deionized water, then with acetone, then was dried. The dried samples were reweighed to the nearest 0.0001 gram, to determine weight loss.

Figure 1 The Silcosteel®-CR coating is a well-bonded, dense layer designed to protect the substrate from attack by acids.

FAST FACTS

At-a-Glance Product Information from Restek

Silcosteel®-CR

Restek
Performance
Coatings

Table 1 summarizes the results of this experiment. Silcosteel®-CR treated 316L stainless steel samples exhibited an order of magnitude less corrosion, compared to bare samples. As seen in Figures 2 and 3, Silcosteel®-CR treated coupons exhibited no crevice corrosion, while untreated coupons exhibited severe crevice corrosion. Silcosteel®-CR treated coupons experienced only slight pitting corrosion during this aggressive test.

Figure 2 Silcosteel®-CR treated 316L stainless steel coupons show no crevice corrosion and only slight pitting corrosion.

Table 1 Silcosteel®-CR treated coupons show little weight loss after exposure to 6% w/w ferric chloride solution.

Sample	Weight Loss (g/m ²)
Silcosteel®-CR sample 17	19
Silcosteel®-CR sample 28	25
Silcosteel®-CR sample 47	25
Bare Steel sample 27	231
Bare Steel sample 34	209
Bare Steel sample 37	228

Figure 3 Bare 316L stainless steel coupons exhibit severe crevice corrosion.

Cyclic Polarization Electrochemical Corrosion Testing of Silcosteel®-CR Treated 316L Stainless Steel Coupons and Bare 316L and Bare 304 Stainless Steel Coupons, by ASTM G 61

Samples were tested in accordance with ASTM G 61 in acidic and neutral aqueous solutions, at 23°C, at three chloride ion (Cl⁻) levels. Tables 2 and 3 summarize the test results: Silcosteel®-CR treated 316L stainless steel coupons outperformed bare 316L stainless steel by a factor of approximately 50 in neutral chloride solutions, and by approximately 10 in acidic chloride solutions. At a chloride concentration of 3000ppm, Silcosteel®-CR treated 316L stainless steel coupons outperformed 304 stainless steel coupons by a factor of approximately 65 in neutral solutions and by approximately 20 in acidic solutions. Table 4 summarizes the test results for Silcosteel®-CR treated 316L stainless steel and bare 304 stainless steel. Table 5 summarizes the corrosion potential, E_c, for Silcosteel®-CR treated 316L stainless steel.

Table 2 Silcosteel®-CR treatment greatly reduces corrosion rates in chloride solutions. (Corrosion rate in mpy (mil per year) determined by electrochemical testing.)

	Silcosteel®-CR	Bare Steel (316L)	Improvement

1000 Hour Salt Spray Testing (ASTM B 117) and Condensing Humidity Testing (ASTM D 4585) of Silcosteel®-CR Treated 316L Stainless Steel Coupons and Bare Coupons

ASTM B 117 (*Practice of Operating Salt Spray (Fog) Apparatus*) was run for a total of 1000 hours. Three Silcosteel®-CR treated 316L stainless steel coupons and 3 bare coupons were tested side by side. The Silcosteel®-CR treated coupons showed no signs of bleeding, rusting or pitting corrosion. The bare samples exhibited light surface rusting but no signs of pitting. Figure 4 shows a Silcosteel®-CR treated sample and a bare steel sample after salt spray testing.

ASTM D 4585 (*Practice for Testing the Water Resistance of Coatings, Using Controlled Condensation*) was run for a total of 1000 hours. Three Silcosteel®-CR treated 316L stainless steel coupons and 3 bare coupons were tested side by side. The Silcosteel®-CR treated coupons showed no signs of bleeding, rusting, or pitting corrosion. The bare samples exhibited a very light surface oxide film as a result of exposure. Figure 5 is a photograph of a Silcosteel®-CR treated sample and a bare steel sample after testing.

Figure 4 Silcosteel®-CR treated 316L stainless steel coupons show no corrosion as a result of salt spray testing; bare coupons show light rusting at aperture.*

Silcosteel®-CR treated

bare stainless steel

Figure 5 Silcosteel®-CR treated 316L stainless steel coupons show no impact of water exposure; bare coupons exhibit a light oxide layer.

Silcosteel®-CR treated

bare stainless steel

*Color at the tip of the Silcosteel®-CR treated coupon is due to light refraction by the treatment layer.

What advantages are gained by applying Silcosteel®-CR treatment to steel and stainless steel components in contact with corrosive environments? Silcosteel®-CR treatment will ensure longer lifetimes for these components. Maintenance schedules can be prolonged. Reduced corrosion will mean less contamination in process streams in contact with corroding steel substrates. Finally, Silcosteel®-CR treated components will greatly reduce system cost, relative to super alloy components (e.g., Hastelloy® or Inconel®).

Silcosteel®-CR Treated Fittings

A broad line of $\frac{1}{16}$ ", $\frac{1}{8}$ " and $\frac{1}{4}$ " fittings is available with Silcosteel®-CR treatment. Because of expanding applications for these coatings, we have received many requests for a broader product offering. If you do not see everything you need, contact us for information on additional stock items, or for custom coating services.

Silcosteel®-CR

These fittings are manufactured by Parker Hannifin. Swagelok® fittings also are available—see our website.

See page 4 for
Silcosteel®-CR treated
tubing.

Coiled Silcosteel®-CR -Treated Seamless 316L Stainless Steel Tubing

ID	OD	cat.#
0.055" (1.40mm)	1/8" (3.18mm)*	22896
0.180" (4.57mm)	1/4" (6.35mm)*	22897

*0.035" wall thickness

Priced by the foot;
lengths to >400 feet

See page 3
for Silcosteel®-CR treated
fittings.

The Silcosteel®
layer is a general
purpose passiva-
tion layer for
metals.

Siltek™ provides
the ultimate
passivation for
many surfaces,
from glass to high
nickel alloys of
steel.

Sulfinert™ coating
on metal compo-
nents is required
when analyzing for
parts-per-billion
levels of organo-
sulfur compounds.

Ordering note

An extra charge is applied for cutting Sulfinert™ or Silcosteel® tubing. The charge is calculated from the total number of pieces produced from cutting, for each line item.

About Us

Restek's involvement in coatings began in 1987. The focus of our initial work was to produce a coating on stainless steel that was inert to low-level reactive organic compounds, such as explosives and volatile organic compounds (VOCs). The end product from this work was the Silcosteel® coating for stainless steel tubing.

Silcosteel® coated tubing currently is used for construction of analytical testing equipment by all major manufacturers of gas chromatography sampling and testing equipment.

Since this initial project, Restek's coatings experts have developed a family of coatings to address other specific needs and thereby enhance the performance of system components. In brief, these coatings are:

- **Silcosteel®**—A general purpose passivation layer for steel and stainless steel. U.S. Patent 6,511,760.
- **Silcosteel®-CR**—A corrosion resistant layer that increases the lifetime of system components in acidic environments containing hydrochloric, nitric, or sulfuric acid. Patent pending.
- **Silcosteel®-UHV**—Used to reduce outgassing by components of ultra-high vacuum systems. Patent pending.
- **Silcosteel®-AC**—Dramatically reduces carbon buildup on stainless steel components. U.S. Patent 6,444,326.
- **Siltek™**—Provides the ultimate passivation of coated components, from glass to high nickel alloys of steel. U.S. Patent 6,444,326.
- **Sulfinert™**—A required coating on metal components when analyzing for parts-per-billion levels of organo-sulfur compounds. U.S. Patent 6,444,326.

Restek coatings are used in many applications, spanning multiple industries and market areas. Let us solve your surface activity problems. Contact Dave Smith at 800-356-1688 or 814-353-1300, x 2154, or by email at daves@restekcorp.com.
